Which two statements are correct in this Scenario? (Choose Two)

- A. The file debugger will be readable only by the user who committed this configuration
- B. Once the trace has generated 10 log files, the trace process will halt.
- C. The file debugger will be readable by all users.
- D. Once the trace has generated 10 log files, older logs will be overwritten.

Answer: B,D

Explanation:

Once the trace has generated 10 log files, older logs will be overwritten. - This is generally true if the configuration includes a file count limit and the 'world-readable' flag. Without the 'world-readable' flag, only the file's owner or superuser can read the file. If the 'no-world-readable' flag is set, only the user that created the file and root can read it.

Once the trace has generated 10 log files, the trace process will halt. - This would be true only if the 'files' statement is used without the 'world-readable' or 'no-world-readable' flag. If 'no-world-readable' is set, the trace files are not readable by all users.
