## Cisco Implementing and Operating Cisco Service Provider Network Core Technologies Sample Questions (Q185-Q190):

### NEW QUESTION # 185

Refer to the exhibit. All edge routers are fully meshed via the iBGP and IS-IS routing protocols, and LDP is used for label distribution. The network engineer must protect the TE tunnels and MPLS network from interface flaps and retain label information in the LIB cache for 10 minutes.

Which action completes the implementation?

- A. Enable signaling synchronization for MPLS traffic engineering with the timeout set to 600 seconds.
- **B. Implement LDP session protection with a duration of 600 seconds.**
- C. Enable the MPLS TTL signaling expiration timer with the timeout set to 10 minutes.
- D. Implement MPLS label protection with a duration of 10 minutes.

**Answer: B**

Explanation:

LDP session protection helps prevent session teardown during interface flaps by maintaining the session for a specified hold time (in this case, 600 seconds or 10 minutes). This retains label bindings in the LIB and avoids reconvergence.

#### NEW QUESTION # 186

Refer to the exhibit:

```

class-map match-any class1
match protocol ipv4
match qos-group 4

```

A network engineer is implementing QoS services. Which two statements about the QoS-group keyword on Cisco IOS XR 3re true? (Choose two )

- A. The QoS group numbering corresponds to priority level
- **B. QoS group marking occurs on the ingress**
- C. It marks packets for end to end QoS pokey enforcement across the network
- **D. QoS group can be used in fabric QoS policy as a match criteria**
- E. It cannot be used with priority traffic class

**Answer: B,D**

Explanation:

The QoS-group keyword on Cisco IOS XR is used for marking packets on the ingress of the device. This allows for internal handling and is not transmitted across the network. It can be used in fabric QoS policy as a match criteria to apply specific policies

based on the QoS group marking.

### NEW QUESTION # 187

Refer to the exhibit.
