## Juniper JN0-481 Questions: Defeat Exam Preparation Stress [2026]

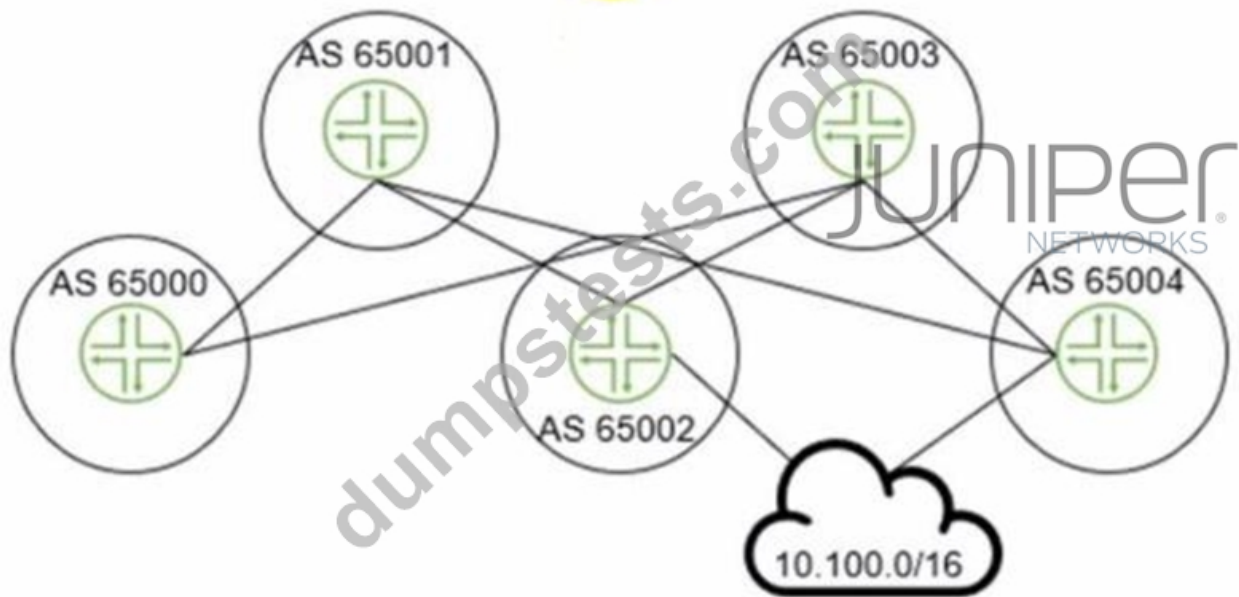

Preparing for Data Center, Specialist (JNCIS-DC) (JN0-481) exam can be a challenging task, especially when you're already juggling multiple responsibilities. People who don't study with updated Juniper JN0-481 practice questions fail the test and lose their resources. If you don't want to end up in this unfortunate situation, you must prepare with actual and Updated JN0-481 Dumps of DumpsTests. At DumpsTests, we believe that one size does not fit all when it comes to Juniper JN0-481 exam preparation. Our team of experts has years of experience in providing Juniper JN0-481 exam preparation materials that help you reach your full potential.

## Juniper Data Center, Specialist (JNCIS-DC) Sample Questions (Q74-Q79):

### NEW QUESTION # 74

The 10.100.0.0/16 route is being advertised into your BGP IP fabric. ECMP load balancing has been properly enabled on all devices.

In this scenario, how many routes will the leaf device in AS 65000 receive for the 10.100.0.0/16 prefix?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: D**

Explanation:

The leaf device in AS 65000 will receive three routes for the 10.100.0.0/16 prefix, one from each spine device in AS 65001, AS 65002, and AS 65003. Since ECMP load balancing is enabled, the leaf device will install all three routes in its routing table and distribute the traffic among them.

#### NEW QUESTION # 75

Which of the following two statements are correct?

- A. VXLAN is a Layer 2 encapsulation protocol
- B. VXLAN encapsulation discards VNIs
- C. VXLAN is a Layer 3 encapsulation protocol
- D. VXLAN encapsulation discards VLAN IDs

**Answer: A,D**

#### NEW QUESTION # 76

Referring to the exhibit, how do you display the IPv6 subnets for all of the listed VXLANs?

Query: All 1-17 of 17

Columns (9/11) Page Size: 25

Filter selected by ☒ all ☐ selected only ☐ unselected only

<input type="checkbox"/>	Name	Routing Zone	Type	VN ID	Assigned to	DHCP Service	IPv4 Connectivity	IPv4 Subnet	Actions
<input type="checkbox"/>	vlan_30_leaf3_v4	default	VLAN	30	1 nodes	Enabled	Enabled	10.1.3.0/24	
<input type="checkbox"/>	red_vxlan_42_v4_one_ep_mlag	red	VXLAN	30011	2 nodes	Enabled	Enabled	10.1.15.0/24	
<input type="checkbox"/>	red_vxlan_41_v4_one_ep	red	VXLAN	30010	2 nodes	Enabled	Enabled	10.1.14.0/24	

- A. An IPv6 Subnets column is not shown, indicating that no VXLAN has an assigned IPv6 subnet
- **B. Select Columns, then select IPv6 Subnet.**
- C. Select all VXLANs, and the IPv6 Subnets column will appear
- D. IPv6 subnets are shown when each VXLAN is selected individually.

**Answer: B**

Explanation:

Referring to the exhibit, the image shows a user interface of the Juniper Apstra software application, which is used for network management and configuration. The image shows the Virtual Networks table under the Resources menu, which displays the details of the VLANs and VXLANs in the network. The table has 11 columns, but only 9 are visible in the image. The other two columns are IPv6 Connectivity and IPv6 Subnet, which are hidden by default. To display the IPv6 subnets for all of the listed VXLANs, the user needs to select Columns, then select IPv6 Subnet. This will show the IPv6 Subnet column in the table, which will display the IPv6 addresses assigned to the VXLANs from the IPv6 pools. For more information, see Virtual Networks (Resources).

#### NEW QUESTION # 77

Which two statements are correct about Time Voyager? {Choose two.}

- A. Time Voyager retains all of the blueprint revisions from the last Juniper Apstra backup.
- **B. Time Voyager retains up to twenty-five saved revisions.**
- C. Time Voyager retains the last ten blueprint commits.
- **D. Time Voyager retains the five most recent blueprint commits.**

**Answer: B,D**

Explanation:

Time Voyager is a feature of Juniper Apstra that allows you to restore previous revisions of a blueprint, which is a logical representation of your network design and configuration. Time Voyager automatically saves the five most recent blueprint commits, which are the changes that you apply to the network. You can also manually save up to twenty-five revisions by keeping them, which prevents them from being overwritten by new commits.

#### NEW QUESTION # 78

Which statement about Juniper Apstra role-based access control is correct?

- A. The administrator role is the only predefined role.
- B. The viewer role is predefined and can be deleted.
- **C. The administrator role can see all permissions.**
- D. The user role can create roles.

**Answer: C**

Explanation:

Juniper Apstra role-based access control (RBAC) is a feature that allows you to specify access permissions for different users based

on their roles. RBAC servers are remote network servers that authenticate and authorize network access based on roles assigned to individual users within an enterprise. Juniper Apstra has four predefined user roles: administrator, device\_ztp, user, and viewer. The administrator role is the most powerful role, and it can see all permissions and perform all actions in the Apstra software application. The administrator role can also create, clone, edit, and delete user roles, except for the four predefined user roles, which cannot be modified. Therefore, the statement that the administrator role can see all permissions is correct.

## NEW QUESTION # 79

.....

Juniper JN0-481 Practice tests are formatted like real tests. The DumpsTests platform provides an exceptional level of support for individuals preparing for and taking the Juniper JN0-481 exam. Their dedicated support team is available to assist candidates with any issues or concerns related to Juniper JN0-481 Test Preparation. Additionally, the platform offers a money-back guarantee for those who do not pass the JN0-481 test on their first attempt.
