Test DEP-2025 Tutorials - Valid Dumps DEP-2025 Ppt

We can proudly say that our DEP-2025 exam questions are global. So no matter what kinds of DEP-2025 test torrent you may ask, our after sale service staffs will help you to solve your problems of DEP-2025 practice braindump in the most professional way. Since our customers aiming to DEP-2025 study tool is from different countries in the world, and there is definitely time difference among us, we will provide considerate online after-sale service on our DEP-2025 training guide twenty four hours a day, seven days a week, please just feel free to contact with us anywhere at any time.

Apple Deployment and Management Exam Sample Questions (Q209-Q214):

NEW QUESTION # 209

Which statement is true about account-driven User Enrollment?

- A. It doesn't support federated authentication.
- **B. Service discovery is used to identify the MDM enrollment URL.**
- C. The device serial number must appear in Apple Business Manager.
- D. Users sign in to their personal Apple Account.

Answer: B

Explanation:

Service discovery aids account-driven User Enrollment. The iOS Deployment Reference states, "Account-driven User Enrollment uses service discovery to automatically locate the MDM enrollment URL, streamlining the process." Option A is false (Managed Apple ID required), C applies to ADE, and D is incorrect (federation is supported).

References:

iOS Deployment Reference, "Account-driven Enrollment" section.

Apple Platform Deployment Guide, "User Enrollment" section.

NEW QUESTION # 210

Which type of 802.1X configuration allows Mac computers to connect to Wi-Fi before login and user authentication after login?

- A. System+Login Window Mode
- B. User Mode

- C. System+User Mode
- D. System Mode

Answer: C

Explanation:

System+User Mode supports pre- and post-login connectivity. The Apple Platform Deployment Guide states, "System+User Mode for 802.1X allows a Mac to connect to Wi-Fi using system credentials before login and switches to user credentials after login, ensuring network access at all stages." Option B is not a standard term, C requires login first, and D uses only system credentials.

References:

Apple Platform Deployment Guide, "802.1X Authentication" section.
macOS Deployment Reference, "Network Configuration" section.

NEW QUESTION # 211

What's required to use Find My on a device?

- A. Supervision
- B. An MDM solution
- C. A VPN configuration
- D. An Apple ID

Answer: D

Explanation:

Find My requires an Apple ID (personal or Managed) to enable device tracking, remote locking, or wiping via iCloud. It's a user-initiated feature activated in device settings, not dependent on organizational tools. An MDM solution (option A) can manage Find My settings but isn't required to use it. Supervision (option C) enhances management but isn't necessary for Find My. A VPN configuration (option D) is unrelated.

The Apple Platform Security Guide specifies an Apple ID as the prerequisite for Find My.

Reference: Apple Platform Security Guide (Section: Find My).

NEW QUESTION # 212

What links a device to an MDM solution?

- A. A firewall
- B. An enrollment profile
- C. A restriction
- D. APNs

Answer: B

Explanation:

Mobile Device Management (MDM) solutions are used to manage and secure Apple devices remotely. To link a device to an MDM solution, an enrollment profile is required. This profile is a configuration file that, once installed on the device, establishes a connection between the device and the MDM server, allowing the server to send commands and policies to the device. The enrollment profile contains information such as the MDM server's URL and authentication details, enabling secure communication via Apple Push Notification service (APNs). While APNs (option A) facilitates communication between the MDM server and the device after enrollment, it is not the mechanism that links the device to the MDM solution. A firewall (option B) is a network security tool and unrelated to linking a device to MDM, and a restriction (option C) is a policy applied via MDM, not the linking mechanism itself. According to Apple's official documentation, such as the Apple Platform Deployment Guide, the enrollment profile is the foundational step for MDM enrollment.

Reference: Apple Platform Deployment Guide (Chapter: Mobile Device Management).

NEW QUESTION # 213

Which type of enrollment separates personal and managed data on BYOD devices?

- A. Device Enrollment
