## Microsoft Power Platform Developer Sample Questions (Q381-Q386):

### NEW QUESTION # 381

A company uses five different shipping companies to deliver products to customers. Each shipping company has a separate service that quotes delivery fees for destination addresses.

You need to design a custom connector that retrieves the shipping fees from all the shipping companies by using their APIs.

Which three elements should you define for the custom connector? Each correct answer presents part of the solution.

NOTE: Each correct selection is worth one point.

- A. Fee reference
- B. Fee parameter
- C. Address parameter
- D. Authentication model
- E. OpenAPI definition

**Answer: C,D,E**

Explanation:

Explanation

C: You can create a custom connector using a OpenAPI definition file or a URL to OpenAPI definition.

B: On the Security page you get to choose how to authenticate to the API.

A: If you were to create a Custom Connector from scratch, then you would have to study the API you have chosen and type in the URL manually here.

### NEW QUESTION # 382

You need to assign security roles to groups of users.

Which security roles should you use? To answer, drag the appropriate security types to the correct roles. Each security type may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Graphical user interface, text, application Description automatically generated

Scenario: The company identifies the following job roles:

You must grant users the minimum permissions required to perform their job tasks.

Intern: Environment Maker

Environment Maker: Can create new resources associated with an environment, including apps, connections, custom APIs, gateways, and flows using Microsoft Power Automate. However, this role doesn't have any privileges to access data within an environment.

Manager: System Administrator:

System Administrator: Has full permission to customize or administer the environment, including creating, modifying, and assigning security roles. Can view all data in the environment.

Sales representative: Common Data Service User

Basic User/ Common Data Service User: Read (self), Create (self), Write (self), Delete (self) Can run an app within the environment and perform common tasks for the records that they own.

### NEW QUESTION # 383

A company is creating a new system based on Microsoft Dataverse.

You need to select the Dataverse features that meet the company's requirements.

Which features should you select? To answer, drag the appropriate features to the correct requirements. Each feature may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

□

#### NEW QUESTION # 384

You are creating a canvas app for a company. A security role has been created for sales representatives and a second security role has been created for sales managers.

The canvas app has the following requirements:

- \* Sales managers must be able to view the records of the salespeople in their business unit.
- \* Sales managers must be the only people who can view sales probability data in opportunity records.
- \* Sales representatives and new hires assigned to the same territory share access to sales records.

You need to assign permissions for the app.

Which security options should you use? To answer, drag the appropriate security options to the correct scenarios. Each security option may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

□

#### Answer:

Explanation:

□

Explanation:

□

Box 1: Role-based security

Dataverse uses role-based security to group together a collection of privileges. These security roles can be associated directly to users, or they can be associated with Dataverse teams and business units.

Box 2: Field-level security

Sometimes record-level control of access is not adequate for some business scenarios. Dataverse has a field-level security feature to allow more granular control of security at the field level. Field-level security can be enabled on all custom fields and most system fields.

Box 3: Record-level security

#### NEW QUESTION # 385

You need to reduce response time for the information email on the website.

What should you create?

- A. A flow that creates a SharePoint item for each email response
- B. A power Apps app that displays the number of emails received in a dashboard
- C. Logic app that moves all emails received to Azure Blob storage.
- **D. A flow that create a notification in Microsoft Teams**

#### Answer: D

Explanation:

Explanation

Scenario:

Customers report that the response time from the information email listed on the Adventure Works Cycles website is greater than five days.

\* Microsoft Teams is used for all collaboration.

#### NEW QUESTION # 386
