Huawei HCIP-Access V2.5 Sample Questions (Q21-Q26):

NEW QUESTION # 21

The priority of the packets at the egress port can be mapped or set directly. Which of the following statements about priority processing is correct?

- A. The priority mapping can be set separately for the inner and outer priorities.
- B. The priority policy must be tag-in-package regardless of the priority setting mode.
- C. Priorities of outbound and inbound packets are strictly mapped. An outer VLAN ID cannot be mapped to the priority of an inner VLAN ID.
- D. The priority mapping needs to match the corresponding mapping profile. The mapping in a profile is fixed.

Answer: A

Explanation:

Huawei devices support independent mapping/remarking for inner and outer VLAN priorities (802.1p CoS) when QinQ is used. Operators can define distinct mapping tables or remark rules per tag. Option A is incorrect (priorities can be derived or remarked, not "must be" tag-in-packet), option C is incorrect because mapping profiles are configurable, and option D confuses VLAN IDs with priorities; inner/outer CoS can be mapped independently for inbound/outbound directions.

NEW QUESTION # 22

Which of the following statements about the implementation of VLAN Layer 2 intercommunication through ARP proxy and VLAN service-profile is correct?

- A. Both of them can implement Layer 2 isolation of smart VLANs.
- B. Compared with the VLAN service profile, ARP proxy saves IP addresses.
- C. The ARP proxy must be configured on the OLT to solve the voice interworking problem.
- D. The VLAN service profile must be configured on the ONU to implement voice communication.

Answer: C

Explanation:

For intercommunication across VLANs-especially for voice between ONUs-ARP Proxy is configured on the OLT so the OLT responds to ARP on behalf of endpoints and bridges traffic across VLAN boundaries without exposing the full L3 gateway to each segment.

A: "Saving IP addresses" is not the defining difference; ARP Proxy's function is ARP mediation to enable L2/L3 reachability.

B: Both features target intercommunication, not isolation.

D: A VLAN service-profile is planned and applied from the OLT side to ONUs; it is not "configured on the ONU" directly for this purpose.
