NEW QUESTION # 336

When you troubleshoot an SSL Decryption issue, which PAN-OS CLI command do you use to check the details of the Forward Trust certificate, Forward Untrust certificate, and SSL Inbound Inspection certificate?

- **A. debug dataplane show ssl-decrypt ssl-certs**
- B. show system setting ssl-decrypt certificate
- C. show system setting ssl-decrypt certs
- D. show system setting ssl-decrypt certificate-cache

Answer: A

Explanation:

To troubleshoot SSL Decryption issues and check the details of the Forward Trust certificate, Forward Untrust certificate, and SSL Inbound Inspection certificate, the PAN-OS CLI command `debug dataplane show ssl-decrypt ssl-certs` is used. This command provides detailed information about the SSL certificates involved in decryption and inspection processes, allowing administrators to verify certificate validity, issuer details, and other critical parameters. Understanding the certificate details is crucial in diagnosing issues related to SSL decryption, such as certificate validation errors or misconfigurations that could lead to decryption failures.

NEW QUESTION # 337

The same route appears in the routing table three times using three different protocols. Which mechanism determines how the firewall chooses which route to use?

- A. Metric
- B. Round Robin load balancing
- C. Order in the routing table
- **D. Administrative distance**

Answer: D

NEW QUESTION # 338

An organization is interested in migrating from their existing web proxy architecture to the Web Proxy feature of their PAN-OS 11.0 firewalls. Currently, HTTP and SSL requests contain the c IP address of the web server and the client browser is redirected to the proxy. Which PAN-OS proxy method should be configured to maintain this type of traffic flow?

- A. SSL forward proxy
- **B. Transparent proxy**
- C. Explicit proxy
- D. DNS proxy

Answer: B

Explanation:

Explanation

A transparent proxy is a type of web proxy that intercepts and redirects HTTP and HTTPS requests without requiring any configuration on the client browser¹. The firewall acts as a gateway between the client and the web server, and performs security checks on the traffic.

A transparent proxy can be configured on PAN-OS 11.0 firewalls by performing the following steps¹:

Enable Web Proxy under Device > Setup > Services

Select Transparent Proxy as the Proxy Type

Configure a Service Route for Web Proxy

Configure SSL/TLS Service Profile for Web Proxy

Configure Security Policy Rules for Web Proxy Traffic

By configuring a transparent proxy on PAN-OS 11.0 firewalls, an organization can migrate from their existing web proxy architecture without changing their network topology or client settings². The firewall will maintain the same type of traffic flow as before, where HTTP and HTTPS requests contain the IP address of the web server and the client browser is redirected to the proxy¹.

Answer A is not correct because DNS proxy is a type of web proxy that intercepts DNS queries from clients and resolves them using an external DNS server³. This type of proxy does not redirect HTTP or HTTPS requests to the firewall.

NEW QUESTION # 339

A firewall has been assigned to a new template stack that contains both "Global" and "Local" templates in Panorama, and a successful commit and push has been performed. While validating the configuration on the local firewall, the engineer discovers that some settings are not being applied as intended.

The setting values from the "Global" template are applied to the firewall instead of the "Local" template that has different values for the same settings.

What should be done to ensure that the settings in the "Local" template are applied while maintaining settings from both templates?

- A. Move the "Local" template above the "Global" template in the template stack.
- B. Perform a commit and push with the "Force Template Values" option selected.
- C. Override the values on the local firewall and apply the correct settings for each value.
- D. Move the "Global" template above the "Local" template in the template stack.

Answer: A
