More importantly, our commitment to help you become Order-Management-Administrator Certified does not stop in buying our products. We offer customer support services that offer help whenever you'll be need one.

Salesforce Order Management Administrator Accredited Professional Sample Questions (Q89-Q94):

NEW QUESTION # 89

An administrator is creating a flow to manage order fulfillment. The administrator creates a fault path to handle a possible error. What object record should the administrator create in the fault path to notify users of an error?

- A. Order Summary Exception
- B. OrderError
- C. Fulfillment Error
- D. **Process Exception**

Answer: D

Explanation:

The object record that the administrator should create in the fault path to notify users of an error is Process Exception. A Process Exception is a record that represents an error or exception that occurred during the order lifecycle, such as payment authorization failure, inventory allocation failure, fulfillment location assignment failure, etc. A Process Exception has a lookup relationship to the Order object, and it contains information such as the exception type, status, message, etc. Verified

NEW QUESTION # 90

An administrator is configuring delivery methods. What two types of records need to be created?

- A. Product Summary
- B. **Order Delivery Method**
- C. Order Delivery Summary
- D. Product
- E. **Delivery Method**

Answer: B,E

Explanation:

The Order Delivery Method and Delivery Method objects are used to configure delivery methods for orders.

A delivery method is a way of delivering an order to a customer, such as standard shipping, express shipping, or in-store pickup. A Delivery Method record defines the name, description, type, and cost of a delivery method. An Order Delivery Method record associates an order with a delivery method and stores additional information such as the delivery address, tracking number, and status. References: Order Management Objects, [Delivery Methods]

NEW QUESTION # 91

Where should a service agent go first to view process exceptions related to a specific Order?

- A. Order Record - Details Tab
- B. Order Record - Process Exception Details Tab
- **C. Order Summary Record - Related Tab**
- D. Change order Record -Related Tab

Answer: C

NEW QUESTION # 92

A company has multiple fulfillment centers that they want to utilize when orders are fulfilled. The administrator is tasked with minimizing the distance from fulfillment center to delivery location. How can this be accomplished?

- A. Modify the Fulfillment Location Search process to search by closest distance instead of least number of splits
- B. Ask a developer to create an Apex Action that can determine the closest fulfillment location
- **C. Add the "Order Routing Rank By Closest Distance" action to the fulfillment flow**
- D. Create a Workflow Rule on the Fulfillment Order object that utilizes the Order Management workflow field update actions

Answer: C

Explanation:

The best way for the administrator to accomplish this task is to add the "Order Routing Rank By Closest Distance" action to the fulfillment flow. This action is a flow core action that ranks the fulfillment locations by their distance from the delivery location, and returns a list of ranked locations. The administrator can use this action to find the optimal fulfillment location for each order based on proximity. Verified Reference: https://help.salesforce.com/s/articleView?id=sf.flow_ref_elements_om_actions_order_routing_rank_by_closest_distance.htm&type=5

NEW QUESTION # 93

An administrator is running into performance issues due to a high number of records being created in a flow. How can the administrator modify the flow to improve scalability?

- **A. Use the Bulk Create Records node in the Flow to improve performance**
- B. Offload the creation of records to a Subflow that will be called in the Reference Flow
- C. Ask a developer to create a Flow apex action to offload the creation of records
- D. Ask a developer to offload all the Flow functionality to Apex code via Triggers and Apex classes

Answer: A

Explanation:

The best way for an administrator to modify the flow to improve scalability when running into performance issues due to a high number of records being created in a flow is to use the Bulk Create Records node in the Flow. This node allows the administrator to create multiple records of the same object type in one transaction, which reduces the number of database operations and improves the flow performance. Verified Reference: https://help.salesforce.com/s/articleView?id=sf.flow_ref_elements_data_bulk_create.htm&type=5

NEW QUESTION # 94

.....

If you want to constantly improve yourself and realize your value, if you are not satisfied with your current state of work, if you still spend a lot of time studying and waiting for Order-Management-Administrator qualification examination, then you need our Order-Management-Administrator material, which can help solve all of the above problems.
