AVIXA Certified Technology Specialist Sample Questions (Q210-Q215):

NEW QUESTION # 210

A cardioid subwoofer array uses delay, equalization, and

- A. polarity.
- B. phase shift.
- C. gating.
- D. compression.

Answer: B

Explanation:

In a cardioid subwoofer array, phase shift is employed along with delay and equalization to control the directivity of the sound, focusing bass energy forward and minimizing it behind. Phase shifting alters the waveforms of sound signals, contributing to the cardioid pattern that reduces bass spill to unwanted areas.

CTS Technology Specialist ReferenceThe CTS materials on sound system design explain that phase manipulation, alongside delay, is essential for cardioid subwoofer arrays to control low-frequency dispersion effectively.

NEW QUESTION # 211

Which of these cables should be used for a balanced microphone signal?

□

- A. B
- B. A
- C. C
- D. D

Answer: B

Explanation:

Cable A is a shielded twisted pair (STP) cable, which is suitable for carrying balanced microphone signals.

Balanced audio cables have three conductors: two for the signal (positive and negative) and one for the ground. The twisted pair helps to cancel out electromagnetic interference, providing a cleaner signal with less noise. The shielding further protects against external interference, making it ideal for professional audio applications.

NEW QUESTION # 212

During project delivery and after completion, it is important to ensure correct management of control system code so that

- A. other contractors are unable to reuse or edit code.
- B. sub-contract programmers submit uncompiled code as per their contract of employment.
- C. programming costs will be within project budget.
- D. the most up-to-date version of code is available for upload when required.

Answer: D

Explanation:

Proper management of control system code during and after project delivery is crucial to ensure that the most current version of the code is always available. This allows for quick and accurate updates, troubleshooting, and maintenance when needed. Ensuring that the latest version of the code is well-documented and accessible helps maintain the integrity of the system and supports efficient operations and future modifications. This practice reduces the risk of running outdated or incorrect code, which can lead to system malfunctions and increased costs.

NEW QUESTION # 213

When connecting a condenser microphone, what MUST be included in the system design for it to operate?

- A. stand
- B. mixer
- C. power source
- D. transmitter

Answer: C

Explanation:

A condenser microphone requires a power source to operate because it uses an electrostatic principle to convert sound into an electrical signal. This power is typically provided by phantom power supplied by a mixer or an audio interface. Without this power source, the condenser microphone will not function. It is crucial to include a power source in the system design to ensure the microphone operates correctly.

NEW QUESTION # 214

A schedule is being created for a project. Which of these factors will have the MOST impact on the calculations?

- A. labor hours
- B. blueprints
- C. cost of materials
- D. inventory

Answer: A

Explanation:

When creating a project schedule, labor hours are critical as they directly impact the timeline. Labor hours dictate how long tasks will take, which influences the entire schedule and project completion date.

CTS Technology Specialist Reference

Project management materials in CTS emphasize that accurate labor estimates are essential for realistic scheduling and resource allocation, directly impacting project duration.
