## Reliable AZ-120 Exam Voucher | Valid AZ-120 Exam Syllabus

Our PDFDumps have a huge IT elite team. They will accurately and quickly provide you with Microsoft certification AZ-120 exam materials and timely update Microsoft AZ-120 exam certification exam practice questions and answers and binding. Besides, PDFDumps also got a high reputation in many certification industry. The the probability of passing Microsoft Certification AZ-120 Exam is very small, but the reliability of PDFDumps can guarantee you to pass the examination of this probability.

### Microsoft Planning and Administering Microsoft Azure for SAP Workloads Sample Questions (Q300-Q305):

#### NEW QUESTION # 300

You have an Azure Active Directory (Azure AD) tenant and an SAP Cloud Platform Identity Authentication Service tenant. You need to ensure that users can use their Azure AD credentials to authenticate to SAP applications and services that trust the SAP Cloud Platform Identity Authentication Service tenant.

In which order should you perform the actions? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

#### Answer:

Explanation:

□ Explanation:

Step 1: Create and configure an enterprise application in the Azure AD tenant To configure the integration of SAP Cloud Platform Identity Authentication into Azure AD, you need to add SAP Cloud Platform Identity Authentication from the gallery to your list of managed SaaS apps.

\* Sign in to the Azure portal using either a work or school account, or a personal Microsoft account.

\* On the left navigation pane, select the Azure Active Directory service.

\* Navigate to Enterprise Applications and then select All Applications.

\* To add new application, select New application.

\* In the Add from the gallery section, type SAP Cloud Platform Identity Authentication in the search box.

\* Select SAP Cloud Platform Identity Authentication from results panel and then add the app. Wait a few seconds while the app is added to your tenant.

□ Step 2: Download the single sign-on (SSO) metadata from the Azure AD tenant.

Download single sign-on metadata from Azure Active Directory.

Step 3: Create and configure a corporate identity provider.

Create corporate identity provider.

Step 4: Download the SAP Cloud Platform Identity Authentication Service tenant metadata.

Download Identity Authentication service tenant metadata.

Step 5: Upload the SAP Cloud Platform Identity Authentication Service tenant metadata to Azure AD tenant.

Upload Identity Authentication service tenant metadata to Azure Active Directory.

You have already uploaded the metadata file from Azure Active Directory to Identity Authentication service.

It's time to do it the other way round now and upload the metadata of Identity Authentication service to Azure Active Directory.

#### NEW QUESTION # 301

You plan to deploy SAP application servers that run Windows Server 2016.

You need to use PowerShell Desired State Configuration (DSC) to configure the SAP application server once the servers are deployed.

Which Azure virtual machine extension should you install on the servers?

- A. the Azure DSC VM Extension
- B. the Azure Enhanced Monitoring Extension for SAP
- C. the Azure Chef extension

- D. the Azure virtual machine extension

**Answer: A**

Explanation:

The Azure Desired State Configuration (DSC) VM Extension is updated as-needed to support enhancements and new capabilities delivered by Azure, Windows Server, and the Windows Management Framework (WMF) that includes Windows PowerShell.

### NEW QUESTION # 302

This question requires that you evaluate the underlined BOLD text to determine if it is correct.

You are planning for the administration of resources in Azure.

To meet the technical requirements, you must first implement Active Directory Federation Services (AD FS).

Instructions: Review the underlined text. If it makes the statement correct, select "No change is needed". If the statement is incorrect, select the answer choice that makes the statement correct.

- A. Enterprise State Roaming
- **B. No change is needed**
- C. Azure AD Connect
- D. Azure AD join

**Answer: B**

Explanation:

The SAP Cloud Platform Identity Authentication and Active Directory Federation Services enable you to implement SSO across applications or services that are protected by Azure AD (as an IdP) with SAP applications and services that are protected by SAP Cloud Platform Identity Authentication.

Scenario: Use Active Directory accounts to administer Azure resources.

Incorrect Answers:

Not D: With Windows 10, Azure Active Directory (Azure AD) users gain the ability to securely synchronize their user settings and application settings data to the cloud. Enterprise State Roaming provides users with a unified experience across their Windows devices and reduces the time needed for configuring a new device. Enterprise State Roaming operates similar to the standard consumer settings sync that was first introduced in Windows 8.

### NEW QUESTION # 303

You plan to deploy SAP on Azure.

The deployment must meet the following requirements:

- \* Support failover to another Azure region in the event of a regional outage.
- \* Minimize data loss during a failover.
- \* Minimize costs.

Which fault tolerance technology should you choose for the SAP Web Dispatcher and the Microsoft SQL Server 2017 servers to meet the requirements? To answer, drag the appropriate technologies to The correct targets. Each technology may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

### NEW QUESTION # 304

You are planning replication of the SAP HANA database for the disaster recovery environment in Azure.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.
