NEW QUESTION # 16
Which tool is used for business process analysis in the RISE toolchain?

- A. SAP Business Technology Platform
- B. SAP Enable Now
- C. SAP LeanIX
- D. SAP Signavio

Answer: D

Explanation:
SAP Signavio is SAP's dedicated suite for business process analysis and optimization. Within the RISE with SAP toolchain, Signavio enables organizations to evaluate existing processes, identify performance gaps, benchmark operations, and design optimized target processes. It is used heavily during the Discover and Prepare phases to guide fit-to-standard workshops. The other tools support architecture, extensions, and training but do not serve as the main process analysis engine.

NEW QUESTION # 17
Which method is primarily used to assess process performance and identify improvement opportunities in SAP Signavio?

- A. Interface Mapping
- B. Lifecycle Modelling
- C. KPI and Scoring
- D. Tag-Based Filtering

Answer: C

Explanation:
SAP Signavio evaluates business processes using key performance indicators such as cycle times, throughput, automation rates,

backlog volumes, and exception counts. These performance metrics are combined with a scoring system that highlights strengths and weaknesses across processes. This KPI-based evaluation helps identify bottlenecks, inconsistencies, or inefficiencies that should be targeted for improvement. The other options support documentation or filtering but are not the main method for performance assessment.

What are the phases of a business transformation process?

- A. Discover, prepare, explore, realize, deploy, run
- B. Analyze, plan, execute, monitor

- D. Discover, plan, analyze, design, implement, operate

Answer: A

These six phases-Discover, Prepare, Explore, Realize, Deploy, and Run-represent the standard SAP Activate-based structure used in transformation projects.
