Many students did not perform well before they use Cisco Certified Support Technician (CCST) Cybersecurity actual test. They did not like to study, and they disliked the feeling of being watched by the teacher. They even felt a headache when they read a book. There are also some students who studied hard, but their performance was always poor. Basically, these students have problems in their learning methods. 100-160 prep torrent provides students with a new set of learning modes which free them from the rigid learning methods.

Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q245-Q250):

NEW QUESTION # 245

Which of the following is an example of a corrective control?

- A. Antivirus software
- **B. Backup and recovery**
- C. Intrusion prevention system
- D. User awareness training

Answer: B

Explanation:

Backup and recovery is a corrective control that enables organizations to restore systems, data, and services after an incident or a failure. It helps to recover from various incidents such as data loss, hardware failure, or a security breach, restoring operations to a functional state.

NEW QUESTION # 246

Which of the following involves dividing a network into smaller, more manageable segments?

- A. VLAN configuration
- B. DHCP configuration
- **C. Subnetting**
- D. IP addressing

Answer: C

Explanation:

Subnetting is the process of dividing a network into smaller subnetworks, called subnets or subnetworks. It helps in improving network performance, optimizing address allocation, and enhancing network security. Subnetting is typically done by using a subnet mask to determine the network and host portions of an IP address.

NEW QUESTION # 247

Which of the following password policies is considered a best practice?

- A. Enforcing a minimum password length and complexity requirements
- B. Requiring passwords to be changed every 5 years
- C. Storing passwords in plain text format
- D. Allowing users to set easily guessable passwords

Answer: A

Explanation:

Enforcing a minimum password length and complexity requirements is considered a best practice for password policies. This helps to ensure that passwords are not easily guessable and increases the security of user accounts.

NEW QUESTION # 248

Which of the following best describes the concept of automation in cybersecurity testing?

- A. Performing physical tests on network infrastructure
- B. Using software and tools to automatically conduct security tests
- C. Conducting manual security tests
- D. Implementing security controls to prevent attacks

Answer: B

Explanation:

Automation in cybersecurity testing involves using software and tools to automatically conduct security tests. This approach helps to increase efficiency and accuracy by automating repetitive tasks, such as vulnerability scanning, penetration testing, and log analysis. It allows for the identification of security issues and vulnerabilities in a timely manner.
