Excellent CIS-PA – 100% Free Exam Fee | CIS-PA Reliable Test Practice

DumpsMaterials has many Certified Implementation Specialist - Platform Analytics (CIS-PA) practice questions that reflect the pattern of the real Certified Implementation Specialist - Platform Analytics (CIS-PA) exam. DumpsMaterials allows you to create a Certified Implementation Specialist - Platform Analytics (CIS-PA) exam dumps according to your preparation. It is easy to create the ServiceNow CIS-PA Practice Questions by following just a few simple steps. Our Certified Implementation Specialist - Platform Analytics (CIS-PA) exam dumps are customizable based on the time and type of questions.

ServiceNow CIS-PA Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Data Visualization: This section focuses on presenting data through widgets, interactive filters, appropriate visualizations, dashboards, and analyzing data using Analytics Hub and KPI Details.
Topic 2	<ul style="list-style-type: none">• Configure Breakdowns and Breakdown Sources: This section covers setting up breakdowns to analyze indicators across different dimensions, including breakdown mappings, matrices, exclusions, scripted mappings, and bucket groups.
Topic 3	<ul style="list-style-type: none">• Administration and Solutions: This domain covers administrative tasks using the Admin Console and accelerating deployment with pre-built Content Packs.
Topic 4	<ul style="list-style-type: none">• Perform Diagnostics and Troubleshooting: This section addresses identifying and resolving issues using Spotlight diagnostic tools to monitor system health and performance.

ServiceNow Certified Implementation Specialist - Platform Analytics Sample Questions (Q52-Q57):

NEW QUESTION # 52

Which definition describes the functionality of a Formula Indicator?

- A. The Formula Indicator score is calculated when the Formula Indicator is viewed
- B. A Formula Indicator can reference the Indicator Threshold value
- C. A Formula Indicator is needed anytime you need to calculate an aggregate
- **D. A Formula Indicator can use up to 5 Automated Indicators**

Answer: D

Explanation:

A Formula Indicator in ServiceNow Platform Analytics allows you to calculate a derived score using up to five other indicators (automated or manual) through a mathematical expression. These component indicators must already exist and have collected data.

Formula Indicators are not calculated at view time; instead, they are pre-calculated during data collection and stored like other indicator scores. This ensures consistent historical trending and optimal dashboard performance. Aggregates such as count or sum are handled by automated indicators, not formula indicators.

Formula indicators also cannot reference indicator threshold values, as thresholds are used only for KPI status evaluation and visualization, not for calculations.

ServiceNow documentation clearly states the five-indicator limit and emphasizes that Formula Indicators are meant for derived metrics, such as percentages, ratios, or normalized scores, making option B the only correct definition.

NEW QUESTION # 53

What configuration setting should be used to run a Historical Collection Job?

- A. Daily
- B. Weekly
- **C. Once or On Demand**
- D. Monthly

Answer: C

Explanation:

A Historical Collection Job is designed to collect past data for a defined historical period and is typically executed one time or on demand. Unlike scheduled collection jobs (daily, weekly, or monthly), historical jobs are not intended to run repeatedly.

ServiceNow documentation specifies that historical collections are initiated manually to backfill data for indicators that were created after records already existed. Running them on a recurring schedule could lead to duplicated or incorrect data. Therefore, the correct configuration is Once or On Demand, making option A the correct answer.

NEW QUESTION # 54

A filtered Time Series widget shows individual trends for the number of open incidents with High and Critical priorities.

Which action configures the Responsive Canvas Dashboard to show a combined trend for the Critical and High-priority incidents?

- A. Set the Show multiple elements as property to Separate
- **B. Set the Show multiple elements as property to Aggregate**
- C. Check Manual elements and add widget elements for the High and Critical incidents
- D. Apply an elements filter to return High and Critical incidents only

Answer: B

Explanation:

In Responsive Canvas dashboards, when a Time Series widget contains multiple elements, the Show multiple elements as property controls how those elements are visualized. Setting this property to Aggregate combines the values of all returned elements into a single trend line, which is exactly the desired outcome when viewing a combined trend for High and Critical priority incidents.

Applying an elements filter (option D) limits which elements are displayed but does not combine them into one trend. Setting the property to Separate (option C) explicitly shows individual trend lines for each element.

Manually adding elements (option B) still results in multiple distinct series unless aggregation is enabled. According to ServiceNow Platform Analytics documentation, aggregation is the correct method for consolidating multiple indicator elements into one unified visualization on a dashboard.

NEW QUESTION # 55

When sharing a Dashboard, who can be granted Dashboard access?

- A. A specific role
- B. A specific user
- C. A specific user, group, or role
- D. A specific group

Answer: C

Explanation:

In Platform Analytics, dashboards are shared through the dashboardShareaction. In theShare Dashboard dialog, theGrant access tofield explicitly allows you to enterone or more users, groups, or rolesto share the dashboard with. This sharing controls whether recipients canviewthe dashboard oreditit, depending on whether you add them as a viewer or editor. Sharing can also optionally allow recipients to manage (add/edit /remove) sharing permissions if that option is enabled. ServiceNow further notes that only certain privileged roles (such asadmin, dashboard_admin, pa_admin, or pa_power_user) can see roles in the sharing panel in some configurations, and sharing with roles may require read access to theRoles [sys_user_role]table. This means access can be granted at the individual level (user), team level (group), or permission level (role), making "user, group, or role" the correct and complete choice.

NEW QUESTION # 56

When configuring a newMetric Definitionto track theduration an incident is assigned to a specific group, whichtypeshould be selected?

- A. Assignment group
- B. State change
- C. Script calculation
- D. Field value duration

Answer: D

Explanation:

To track how long an incident remains assigned to a specific group, the correct Metric Definition type isField value duration. This type measures the amount of time a record spends with a particular value in a specified field, such as assignment_group. State change metrics track transitions between states, not time spent in a field value. Script calculations are used only when duration cannot be calculated through standard field tracking. "Assignment group" is a field, not a metric type. ServiceNow documentation specifies that Field value duration metrics are designed for tracking time spent in a given field value, making option A the correct choice.

NEW QUESTION # 57

.....

The biggest advantage of our CIS-PA study question to stand the test of time and the market is that our sincere and warm service. To help examinee to pass CIS-PA exam, we are establishing a perfect product and service system between us. We can supply right and satisfactory CIS-PA exam questions you will enjoy the corresponding product and service. We can't say we are the absolutely 100% good, but we are doing our best to service every customer. Only in this way can we keep our customers and be long-term cooperative partners. Looking forwarding to your CIS-PA Test Guide use try!
