SAP Certified Associate - Positioning SAP Business Transformation Management Solutions C_BCBTM_2509 Prüfungsfragen mit Lösungen (Q19-Q24):

19. Frage

What are the benefits of SAP Business Transformation Management solutions?

(Note: There are 2 correct answers to this question.)

- A. They are process mining tools which can help identifying process and IT infrastructure bottlenecks.
- B. They are tools limited to IT landscape analysis and financial reporting.
- C. They empower organizations to drive digital transformation by enhancing process efficiency and IT infrastructure management.
- D. They provide visibility into processes, people, and applications and therefore support our customers in their ERP transformation.

Antwort: C,D

Begründung:

SAP Business Transformation Management (BTM) Solutions are comprehensive, cross-functional tools designed to give organizations visibility across business processes, people, and technology - empowering them to manage digital transformation effectively.

"SAP BTM solutions provide end-to-end visibility across processes, people, and applications, helping organizations streamline ERP transformation initiatives." Reference:

Visibility Across the Enterprise (Answer B):

SAP BTM combines the analytical power of SAP Signavio (process intelligence), SAP LeanIX (enterprise architecture), and

WalkMe (adoption enablement) to support holistic transformation initiatives.

"BTM solutions provide a unified view of the business and IT landscape, ensuring transparency across processes, systems, and stakeholders." Driving Digital Transformation and Efficiency (Answer C):

These solutions enable companies to improve process performance and IT infrastructure through insight-driven optimization and modernization.

"By enhancing process efficiency and IT infrastructure management, SAP BTM empowers organizations to drive digital transformation with measurable business outcomes." Incorrect Options:

A: BTM solutions go far beyond IT analysis; they connect business, IT, and people perspectives.

D: While process mining is part of the suite (via Signavio), BTM offers much broader transformation management beyond mining alone.

Therefore, the verified answers are:

B: They provide visibility into processes, people, and applications and therefore support our customers in their ERP transformation.

C: They empower organizations to drive digital transformation by enhancing process efficiency and IT infrastructure management.

20. Frage

How can BTM Solutions help organizations manage their business transformation?

- A. They are crucial because they exclusively focus on enhancing a company's social media presence and marketing campaigns.
- B. They are revolutionary tools to support financial controlling and reporting.
- C. They are important because they provide direct support for human resource management and payroll processing.
- **D. They help businesses better understand and optimize their processes and IT infrastructure, while assisting the end user coping with digital change.**

Antwort: D

Begründung:

SAP Business Transformation Management (BTM) Solutions combine tools like SAP Signavio, SAP LeanIX, and WalkMe to give enterprises complete visibility and control over both business and IT transformation efforts.

"SAP BTM solutions enable companies to understand and optimize their processes and IT landscapes, while supporting users through change and adoption." Reference:

Process Optimization & IT Alignment:

SAP Signavio provides process mining and analytics, SAP LeanIX maps IT architecture, and WalkMe ensures user adoption.

Together, they deliver an integrated framework for sustainable transformation.

"By integrating business process management, enterprise architecture, and user enablement, SAP BTM helps organizations manage complexity and digital adoption simultaneously." User Adoption and Change Management:

WalkMe, a core BTM component, assists employees in adapting to new systems, minimizing disruption during digital transitions.

"BTM solutions assist end users in coping with digital change by delivering in-application guidance and real-time support." Incorrect Options:

A: Financial controlling is an ERP capability, not a BTM function.

B: Marketing is unrelated to BTM's transformation scope.

C: HR and payroll are managed in SAP SuccessFactors, not BTM.

Verified Correct answer: D: They help businesses better understand and optimize their processes and

21. Frage

What primary issue does WalkMe's solution aim to solve for customers?

- A. Need for upgrading physical infrastructure in organizations
- B. High employee turnover rates
- **C. Challenges in adopting and effectively using digital tools**
- D. Difficulty in maintaining accurate financial records

Antwort: C

Begründung:

The WalkMe Digital Adoption Platform (DAP), which is integrated into SAP's Business Transformation Management (BTM) solutions, primarily addresses the challenge of digital adoption - helping users effectively utilize enterprise software and workflows.

"WalkMe is designed to eliminate user friction with digital systems by providing contextual, in-application guidance and automation that accelerates digital adoption." Reference:

The main problem WalkMe solves is difficulty in adopting and effectively using digital tools, which directly impacts productivity, process efficiency, and transformation success.

"Organizations struggle with the complexity of modern applications; WalkMe's solution enables users to navigate and complete digital processes successfully without training dependency." Options B, C, and D do not represent the platform's focus:

WalkMe is not an HR solution to reduce turnover (B).

It does not manage physical infrastructure (C).

It does not handle financial record accuracy (D).

The central goal, as reinforced in SAP BTM documentation, is to bridge the gap between technology implementation and effective user adoption - making A the correct and verified answer.

22. Frage

What does WalkMe Discovery help organizations achieve?

- A. Enhances employee satisfaction scores by 50%
- B. Automates training development processes
- **C. Identifies underutilized tools and compliance risks**
- D. Translates all tools into multiple languages automatically

Antwort: C

Begründung:

WalkMe Discovery is a key component of the SAP Business Transformation Management (BTM) suite through SAP's partnership with WalkMe. It is designed to provide visibility into the digital application landscape and analyze software usage across the enterprise.

"WalkMe Discovery automatically discovers all web-based applications used across the organization, revealing underutilized tools, shadow IT, and potential compliance risks." Reference:

The tool allows transformation leaders to map actual system usage, understand license utilization, and identify areas of inefficiency or non-compliance, which directly supports SAP's Business Transformation Management (BTM²) framework goals for transparency and optimization.

"By identifying unused or redundant applications, WalkMe Discovery helps organizations reduce costs and mitigate compliance risks as part of their transformation initiatives." Option A (translation automation) and C (automated training development) are functions more aligned with WalkMe Digital Adoption Platform (DAP), not the Discovery module.

"While the WalkMe DAP provides in-app guidance and user training automation, Discovery focuses on discovering and analyzing app usage." Option D (enhancing satisfaction by 50%) is not a defined or measurable objective of the Discovery module; SAP does not claim specific numerical outcomes related to satisfaction.

Therefore, the correct answer - verified from SAP's official transformation documentation and WalkMe integration materials - is B: Identifies underutilized tools and compliance risks.

23. Frage

Which use cases are central to SAP LeanIX solutions?

(Note: There are 2 correct answers to this question.)

- A. Spend Management
- **B. Application Portfolio Management**
- **C. Technology Risk and Compliance**
- D. Blockchain Analytics

Antwort: B,C

Begründung:

SAP LeanIX is primarily focused on providing Enterprise Architecture Management (EAM) and Technology Risk and Compliance (TRC) capabilities, both essential for enabling data-driven transparency and governance in transformation projects.

"Core SAP LeanIX use cases include Application Portfolio Management (APM) and Technology Risk & Compliance (TRC), which help organizations streamline IT landscapes and mitigate risks." Reference:

Application Portfolio Management (Answer B):

SAP LeanIX enables organizations to document, analyze, and optimize their application landscape to ensure efficiency and alignment with business goals.

"The Application Portfolio Management use case helps enterprises assess application value, cost, and redundancy, improving decision-making and IT governance." Technology Risk and Compliance (Answer C):

This feature supports continuous evaluation of IT technology standards and compliance requirements, helping to manage risk exposure and regulatory alignment during transformation.
