

2026 100% Free 1z0-1093-25–Reliable 100% Free New Dumps Book | Oracle Cloud Database Services 2025 Professional New Practice Materials

What's more, part of that Exam4Labs 1z0-1093-25 dumps now are free: https://drive.google.com/open?id=1wZqEg3WtkB_p07ELU1k6cS2qPd8sNbuQ

Just like the old saying goes, motivation is what gets you started, and habit is what keeps you going. A good habit, especially a good study habit, will have an inestimable effect in help you gain the success. The 1z0-1093-25 exam prep from our company will offer the help for you to develop your good study habits. If you buy and use our study materials, you will cultivate a good habit in study. More importantly, the good habits will help you find the scientific prop learning methods and promote you study efficiency, and then it will be conducive to helping you pass the 1z0-1093-25 Exam in a short time. So hurry to buy the 1z0-1093-25 test guide from our company, you will benefit a lot from it.

Oracle 1z0-1093-25 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> MySQL HeatWave Technical Overview: This section of the exam measures the skills of a MySQL Cloud Specialist and introduces MySQL HeatWave, Oracle’s high-performance analytics engine for MySQL. It includes provisioning, migrating existing MySQL databases to HeatWave, and working with its analytical and machine-learning capabilities. It also covers day-to-day operational activities within the MySQL HeatWave environment.
Topic 2	<ul style="list-style-type: none"> Exadata Database Service (ExaDB): This section of the exam measures the skills of a Database Infrastructure Engineer and focuses on the advanced Exadata Database Service. It includes the provisioning of Exadata systems, management of Exadata Cloud Infrastructure, and VM Cluster administration. It also evaluates knowledge of lifecycle management tasks and how to interact with various Exadata management utilities and interfaces.
Topic 3	<ul style="list-style-type: none"> NoSQL Database Service Technical Overview: This section of the exam measures the skills of a NoSQL Developer and explores Oracle’s NoSQL Database Service. It includes understanding the basics of NoSQL architecture, handling table-level security, rate limiting, and data modeling. It also covers concepts like provisioned throughput and the usage of language SDKs for interacting with NoSQL services on Oracle Cloud.
Topic 4	<ul style="list-style-type: none"> Base Database Service - VM (BaseDB): This section of the exam measures the skills of a Cloud Database Administrator and covers the foundational elements of Oracle’s Base Database Service. It includes understanding what the BaseDB service is, how to provision and manage it, and lifecycle operations such as backups, recovery, patching, and upgrades. It also tests familiarity with monitoring and management interfaces used to control and observe the BaseDB environment.

Topic 5	<ul style="list-style-type: none"> • Oracle Cloud Infrastructure Database Management Service: This section of the exam measures the skills of a Cloud Operations Analyst and provides insight into Oracle's Database Management Service on OCI. It focuses on enabling the service for databases, monitoring their performance, and performing diagnostic and tuning activities. It also covers tasks related to the administration of databases running on Oracle Cloud Infrastructure.

Oracle 1z0-1093-25 Questions: [2026] To Pass Exam On the 1st Attempt

We have the free demo for the 1z0-1093-25 study guide, it will help you to have a better understanding of the exam dumps, if you decide to buy and pay for it, we will send the downloading link and password to you within 10 minutes, and if you don't receive it, please contact to our service stuff, we will deal with the problem for you immediately. What's more, free update for the 1z0-1093-25 Study Guide for 365 days, and the update version will send to you by email automatically, therefore you can have the latest information for the Oracle Cloud Database Services 2025 Professional.

Oracle Cloud Database Services 2025 Professional Sample Questions (Q14-Q19):

NEW QUESTION # 14

You are responsible for managing the storage configuration of an Exadata Database Service (ExaDB). You need to use the cellcli utility to modify the IORM (I/O Resource Management) settings to prioritize critical database workloads. Specifically, you want to adjust the share allocation for a specific database. Which cellcli command will accomplish this?

- A. cellcli change iormplan database dbname shares=value
- B. cellcli alter iormplan database dbname shares=value
- C. cellcli configure iormplan database dbname shares=value
- D. cellcli modify iormplan database dbname shares=value

Answer: B

Explanation:

A: cellcli alter iormplan database dbname shares=value

CellCLI Utility:

* cellcli is a command-line interface used to manage Exadata storage cells.

* Thealtercommand is used to modify existing configurations, including IORM plans.

* IORM (I/O Resource Management):

* Helps control how I/O resources are allocated among databases.

* Thesharesparameter adjusts the relative priority of I/O requests.

* Correct syntax for adjusting IORM:

```
bash
```

```
CopyEdit
```

```
cellcli -e "alter iormplan database dbname shares=value"
```

Why the other options are incorrect:

* B. configure iormplan:Used for creating or setting up new IORM plans, not for modification.

* C. modify iormplan:modify is not a valid command in CellCLI for IORM.

* D. change iormplan:No such command exists in CellCLI.

NEW QUESTION # 15

Which two statements accurately describe the Database Management's Autonomous Database monitoring capability?

- A. Database Management provides real-time and historical performance data, but is limited to monitoring CPU utilization on Autonomous Databases.
- B. Database Management offers comprehensive performance monitoring for Autonomous Databases, including CPU utilization, I/O statistics, active session history, and SQL performance analysis.
- C. Database Management can monitor Autonomous Databases, however, the retention period for performance data is

shorter compared to that of non-Autonomous Databases.

- D. Database Management does not support monitoring Autonomous Databases without enabling advanced features in the Autonomous Database itself.

Answer: B,C

Explanation:

Comprehensive Monitoring (C):

Database Management supports detailed performance monitoring for Autonomous Databases, including metrics like CPU usage, I/O statistics, and SQL performance data.

Data Retention Limitation (D):

The retention period for performance data on Autonomous Databases is typically shorter than that of manually managed databases due to automated data management policies.

Why the other options are incorrect:

- * A: Database Management covers more than just CPU monitoring.
- * B: Monitoring does not require enabling additional features on the Autonomous Database.

NEW QUESTION # 16

You are managing an Exadata Database Service (ExaDB) and need to perform a full backup of the database to Oracle Cloud Infrastructure Object Storage using the `bkup_api` utility. The backup must include all datafiles and control files. Which `bkup_api` command will achieve this?

- A. `bkup_api bkup_start --dbname=dbname`
- B. `bkup_api bkup_start --datafiles --controlfile --dbname=dbname`
- **C. `bkup_api bkup_start --full --dbname=dbname`**
- D. `bkup_api bkup_start --all --dbname=dbname`

Answer: C

Explanation:

Full Backup with `bkup_api`:

The `--full` flag in the `bkup_api` command ensures that the backup includes all datafiles and control files. This command is essential for creating a complete, consistent backup suitable for recovery purposes.

- * The backup is stored in OCI Object Storage, leveraging cloud scalability and redundancy.
- * The `--dbname` parameter specifies which database to back up.

Why the other options are incorrect:

- * A: This command may initiate a default backup, not a full one.
- * B: Specifying files individually is less efficient than using `--full`.
- * D: The `--all` option does not necessarily imply a full backup.

NEW QUESTION # 17

Before migrating to MySQL HeatWave, what is the MOST important action to take regarding user accounts and privileges?

- **A. Ensure all user accounts and privileges are compatible with MySQL 8.0, and recreate any incompatible accounts on the target instance.**
- B. Delete all user accounts except for the root account.
- C. Migrate all user accounts to use external authentication (e.g., LDAP).
- D. Merge all user accounts into a single 'admin' account.
- E. Reset all user passwords to default values.

Answer: A

Explanation:

B: Ensure all user accounts and privileges are compatible with MySQL 8.0:

- * MySQL HeatWave is based on MySQL 8.0, so compatibility is crucial.
- * User accounts and privileges must be updated to match the security and syntax requirements of MySQL 8.0.
- * If any incompatibility is detected, the accounts should be recreated on the target HeatWave instance.
- * Typical issues include changes in password hashing algorithms, privilege structure, and role management.

Why the other options are incorrect:

- * A. Resetting passwords to default: Risky from a security perspective and unnecessary.
- * C. Deleting user accounts except root: This drastically limits access and disrupts database operations.
- * D. External authentication (LDAP): Not mandatory or relevant to compatibility with HeatWave.
- * E. Merging accounts into a single 'admin': Violates best practices for user management and security.

NEW QUESTION # 18

Which of the following best describes the primary purpose of table rate limiting within Oracle NoSQL Database Cloud Service?

- A. To automatically optimize table schema design for improved query performance.
- B. To restrict the total amount of storage space a table can consume.
- C. To enforce strict data consistency across all table partitions, ensuring ACID compliance.
- **D. To prevent a single table from consuming excessive resources, ensuring fair allocation and preventing performance degradation for other tables and users.**

Answer: D

Explanation:

Table Rate Limiting:

Table rate limiting ensures that no single table monopolizes system resources, maintaining overall stability and performance in a multi-tenant environment. This feature is crucial for cloud services where numerous applications may share the same database infrastructure. It helps maintain fair access by capping the number of read/write operations per second.

Why the other options are incorrect:

- * A: ACID compliance is achieved through consistency settings, not rate limiting.
- * C: Schema optimization is not related to rate limiting.
- * D: Rate limiting controls IOPS (Input/Output Operations Per Second), not storage space.

NEW QUESTION # 19

.....

The Oracle Cloud Database Services 2025 Professional (1z0-1093-25) certification has become a basic requirement to advance rapidly in the information technology sector. Since Oracle Cloud Database Services 2025 Professional (1z0-1093-25) actual dumps are vital to prepare quickly for the examination. Therefore, you will need them if you desire to ace the Oracle Cloud Database Services 2025 Professional (1z0-1093-25) exam in a short time.
