1 / 7

P.S. Free 2026 Netskope NSK300 dumps are available on Google Drive shared by DumpsFree: <https://drive.google.com/open?id=1xbDaQOWS39AiE8uvwQU9JQmtaGkK8SFJ>

Being anxious for the exam ahead of you? Have a look of our NSK300 practice materials please. Presiding over the line of NSK300 practice materials over ten years, our experts are proficient as elites who made our NSK300 practice materials, and it is their job to officiate the routines of offering help for you. All points are predominantly related with the exam ahead of you. Every page is full of well-turned words for your reference related wholly with the real exam.

Our company always feedbacks our candidates with highly-qualified NSK300 study guide and technical excellence and continuously developing the most professional NSK300 exam materials. You can see the high pass rate as 98% to 100%, which is unmatched in the market. What is more, our NSK300 Practice Engine persists in creating a modern service oriented system and strive for providing more preferential activities for your convenience.

## NSK300 – 100% Free Preparation | High Pass-Rate New Netskope Certified Cloud Security Architect Braindumps Sheet

What is more, we have free demos are freebies for your information. In case you are tentative about their quality, we give these

demos form which you could get the brief outline and questions closely related with the NSK300 practice materials. Only by practising them on a regular base, you will see clear progress happened on you. Besides, rather than waiting for the gain of our NSK300 practice materials, you can download them immediately after paying for it, so just begin your journey toward success now.

## **Netskope Certified Cloud Security Architect Sample Questions (Q29-Q34):**

### **NEW QUESTION # 29**

You are attempting to merge two Advanced Analytics reports with DLP incidents: Report A with 3000 rows and Report B with 6000 rows. Once merged, you notice that the merged report is missing a significant number of rows.

What is causing this behavior?

- A. Visualizations have a system limit of 5000 rows.
- B. Filters are applied differently to dimensions and measures
- **C. Missing data is due to viewing limits.**
- D. Netskope automatically deduplicates data in merged reports.

**Answer: C**

Explanation:

When merging two Advanced Analytics reports in Netskope, if the merged report is missing rows, it is likely due to viewing limits within the system. Netskope's Advanced Analytics platform has limitations on the number of rows that can be viewed at once, which can result in missing data when dealing with large reports. This viewing limit ensures performance and manageability of the data within the system.

### **NEW QUESTION # 30**

Your client is an NG-SWG customer. They are going to use the Explicit Proxy over Tunnel (EPoT) steering method. They have a specific list of domains that they do not want to steer to the Netskope Cloud.

What would accomplish this task"

- A. Define exceptions in the Netskope steering configuration
- **B. Define exception domains in the PAC file.**
- C. Create a real-time policy with a bypass action.
- D. Use an SSL decryption policy.

**Answer: B**

Explanation:

To accomplish the task of not steering specific domains to the Netskope Cloud while using the Explicit Proxy over Tunnel (EPoT) steering method, you would define exception domains in the PAC file (A). This is because the PAC file is used to specify which domains should bypass the proxy and connect directly, thus allowing for granular control over the traffic that is steered to Netskope1.

The use of PAC files for steering exceptions is a standard practice in proxy configurations and is supported by Netskope's EPoT steering method as outlined in their documentation1.

### **NEW QUESTION # 31**

Review the exhibit.

dependent on the type of profile and applications you selected.

User = All Users: click to select subset of users X

**ADD CRITERIA \***

Application EDIT

Application = Microsoft OneDrive

**ACTIVITIES & CONSTRAINTS**

Activity = Upload

**ADD CRITERIA \***

DLP Profile = DLP-SourceCode (predefined) DLP-PCI (predefined) DLP-PII (predefined) X

**PROFILE ACTION**

Profile	Action	...
DLP-SourceCode	Alert	...
DLP-PCI	Block : Default Template	...
DLP-PII	UserAlert : Default Template	...

Set action for each profile ...

+ ADD TRAFFIC ACTION

**Sample**

+ POLICY DESCRIPTION  
+ EMAIL NOTIFICATION

A user has attempted to upload a file to Microsoft OneDrive that contains source code with PII and PCI data. Referring to the exhibit, which statement is correct?

- A. The user will be blocked and a single Incident will be generated referencing the DLP-PCI profile.
- B. The user will be alerted and a single incident will be generated referencing the DLP-PII profile.
- C. The user will be blocked and a separate incident will be generated for each of the matching DLP profiles.
- D. The user will be blocked and a single Incident will be generated referencing all of the matching DLP profiles**

**Answer: D**

### NEW QUESTION # 32

Users at your company's branch office in San Francisco report that their clients are connecting, but websites and SaaS applications are slow. When troubleshooting, you notice that the users are connected to a Netskope data plane in New York where your company's headquarters is located.

What is a valid reason for this behavior?

- A. The closest Netskope data plane to San Francisco is unavailable.**
- B. The Netskope Client's on-premises detection check failed.
- C. The Netskope Client's default DNS over HTTPS call is failing.
- D. The Netskope Client's DNS call to Secure Forwarder is failing

**Answer: A**

Explanation:

The reported issue of slow website and SaaS application access for users in the San Francisco branch office, despite being connected to a Netskope data plane in New York, can be attributed to the geographical distance between the user location and the data plane. The Netskope Security Cloud operates through a distributed network of data planes strategically placed in various regions. When users connect to a data plane that is geographically distant, it can result in latency due to longer network traversal times. In this case, the closest Netskope data plane to San Francisco might be unavailable or experiencing high load, leading to performance issues. To address this, consider optimizing data plane selection based on proximity to the user location or investigating any data plane availability or performance issues.

### NEW QUESTION # 33

Review the exhibit.

The screenshot shows the configuration of a DLP policy. The top section, 'ADD CRITERIA', includes a dropdown for 'User' set to 'All Users' and a dropdown for 'Application' set to 'Microsoft OneDrive'. Under 'ACTIVITIES & CONSTRAINTS', 'Activity' is set to 'Upload'. The 'DLP PROFILE' section lists three profiles: 'DLP-SourceCode (predefined)', 'DLP-PCI (predefined)', and 'DLP-PII (predefined)'. The 'PROFILE ACTION' table shows the following actions:

Profile	Action	Template
DLP-SourceCode	Alert	...
DLP-PCI	Block : Default Template	...
DLP-PII	UserAlert : Default Template	...

Below the table, there is a checked checkbox for 'Set action for each profile' and a link to '+ ADD TRAFFIC ACTION'. At the bottom, there is a 'Sampling' field, a link to '+ POLICY DESCRIPTION', a link to '+ EMAIL NOTIFICATION', and an 'Enabled' toggle switch which is turned on.

A user has attempted to upload a file to Microsoft OneDrive that contains source code with PII and PCI data. Referring to the exhibit, which statement is correct?

- A. The user will be blocked and a single Incident will be generated referencing the DLP-PCI profile.
- B. The user will be alerted and a single incident will be generated referencing the DLP-PII profile.
- C. The user will be blocked and a single Incident will be generated referencing all of the matching DLP profiles
- D. The user will be blocked and a separate incident will be generated for each of the matching DLP profiles.**

**Answer: D**

Explanation:

In the given scenario, a user is attempting to upload a file containing sensitive PII and PCI data to Microsoft OneDrive. The Netskope Security Cloud provides real-time data and threat protection when accessing cloud services, websites, and private apps from anywhere, on any device. Based on the exhibit provided, different DLP (Data Loss Prevention) profiles are triggered - DLP-SourceCode, DLP-PCI, and DLP-PII. Each of these profiles has specific actions associated with them; for instance, an alert is generated for Source Code while blocking actions are initiated for PCI and PII data. Since multiple DLP profiles are triggered due to the sensitive nature of the content in the file being uploaded, separate incidents will be generated for each matching profile ensuring comprehensive security coverage and incident reporting.
