

# Reliable ISTQB-CTFL Study Materials & Pdf ISTQB-CTFL Pass Leader

P.S. Free & New ISTQB-CTFL dumps are available on Google Drive shared by VCEEngine: [https://drive.google.com/open?id=1tMKqNsXCRQ\\_af6IXavhimgnJ00LrQT-W](https://drive.google.com/open?id=1tMKqNsXCRQ_af6IXavhimgnJ00LrQT-W)

We offer a money-back guarantee if you fail despite proper preparation and using our product (conditions are mentioned on our guarantee page). This feature gives you the peace of mind to confidently prepare for your ISTQB Certified Tester Foundation Level (CTFL v4.0) (ISTQB-CTFL) certification exam. Our ISTQB ISTQB-CTFL exam dumps are available for instant download right after purchase, allowing you to start your ISTQB Certified Tester Foundation Level (CTFL v4.0) (ISTQB-CTFL) preparation immediately.

You can enjoy 365 days free update after purchase of our ISTQB-CTFL exam torrent. About the updated ISTQB study material, our system will send the latest one to your payment email automatically as soon as the ISTQB-CTFL updated. So you can study with the latest ISTQB-CTFL Study Material. In addition, VCEEngine offer you the best valid ISTQB-CTFL training pdf, which can ensure you 100% pass. Try our ISTQB-CTFL free demo before you buy, you will be surprised by our high quality ISTQB-CTFL pdf vce.

## Pdf ISTQB-CTFL Pass Leader | Test ISTQB-CTFL Cram

We provide free PDF demo of our ISTQB-CTFL practice questions download before purchasing our complete version. After purchasing we provide one year free updates and one year customer service on our ISTQB-CTFL learning materials. Also we promise "Pass Guaranteed" with our ISTQB-CTFL training braindump. Our aim is to make our pass rate high up to 100% and the

ratio of customer satisfaction is also 100%. If you are looking for valid ISTQB-CTFL preparation materials, don't hesitate, go ahead to choose us.

## ISTQB Certified Tester Foundation Level (CTFL v4.0) Sample Questions (Q356-Q361):

### NEW QUESTION # 356

An alphanumeric password must be between 4 and 7 characters long and must contain at least one numeric character, one capital (uppercase) letter and one lowercase letter of the alphabet.

Which one of the following sets of test cases represents the correct outcome of a two-value boundary value analysis applied to the password length? (Note: test cases are separated by a semicolon)

- A. 1xA;aB11;Pq1ZZab;7iDD0a1x
- B. 1RhT;Sp53;3N3e10;8sBdby
- C. aB11;99rSp:5NnN10;7iDD0a1x
- D. 1xB: aB11: 99rSp: 5NnN10; 4NnN10T; 44ghWn19

### Answer: B

Explanation:

The correct outcome of a two-value boundary value analysis applied to the password length is the set of test cases represented by option D. Boundary value analysis is a test design technique that focuses on the values at the boundaries of an equivalence partition, such as the minimum and maximum values, or the values just above and below the boundaries. A two-value boundary value analysis uses two values for each boundary, one representing the valid value and one representing the invalid value. For example, if the valid range of values is from 4 to 7, then the two values for the lower boundary are 3 and 4, and the two values for the upper boundary are 7 and 8. The test cases in option D use these values for the password length, while also satisfying the other requirements of the password, such as containing at least one numeric character, one capital letter, and one lowercase letter. The test cases in option D are:

- \* 1RhT: a 4-character password that is valid
- \* rSp53: a 5-character password that is valid
- \* 3N3e10: a 6-character password that is valid
- \* 8sBdby: an 8-character password that is invalid The test cases in the other options are incorrect, because they either use values that are not at the boundaries of the password length, or they do not meet the other requirements of the password. For example, the test cases in option A are:
  - \* 1xA: a 3-character password that is invalid, but it does not contain a capital letter
  - \* aB11: a 4-character password that is valid
  - \* Pq1ZZab: a 7-character password that is valid
- \* 7iDD0a1x: an 8-character password that is invalid References: ISTQB Certified Tester Foundation Level (CTFL) v4.0 sources and documents:

### NEW QUESTION # 357

Consider the following simplified version of a state transition diagram that specifies the behavior of a video poker game:

□ What Is the minimum number of test cases needed to cover every unique sequence of up to 3 states/2 transitions starting In the "Start" state and ending In the "End" state?

- A. 0
- B. 1
- C. 2
- D. 3

### Answer: D

Explanation:

The minimum number of test cases needed to cover every unique sequence of up to 3 states/2 transitions starting in the "Start" state and ending in the "End" state is 4. This is because there are 4 unique sequences of up to 3 states/2 transitions starting in the "Start" state and ending in the "End" state:

Start -> Bet -> End

Start -> Deal -> End

Start -> 1st Deal -> End

Start -> 2nd Deal -> End Reference: ISTQB Certified Tester Foundation Level (CTFL) v4.0 sources and documents.

### NEW QUESTION # 358

Which of the following is NOT an objective of testing?

- A. Gaining confidence about the level of quality of the software
- B. Finding defects
- C. **Analyzing and removing the cause of failures**
- D. Providing information for decision-making

**Answer: C**

Explanation:

Analyzing and removing the cause of failures is not an objective of testing, but rather a task of development or maintenance. A failure is an event or behavior that deviates from the expected or specified result of a system under test. A failure is caused by an error (also known as a mistake or a fault) in the software code, design, or specification. Analyzing and removing the cause of failures is a process of locating and fixing errors in the software code, design, or specification, which is also known as debugging or defect resolution.

Analyzing and removing the cause of failures does not aim to find or report defects, but rather to correct or prevent them. The other options are objectives of testing. Finding defects is one of the main objectives of testing, as it helps to improve the quality and reliability of the software product. Providing information for decision-making is another objective of testing, as it helps to support decision making and risk management.

Gaining confidence about the level of quality of the software is another objective of testing, as it helps to assure that the software product meets its requirements and customer or user needs and expectations. ### NEW QUESTION # 359

Match the Work Product with the category it belongs to:

Work Product: 1. Risk register 2 Risk information

3. Test cases

4. Test conditions

Category of work products:

A . Test planning work products

B . Test analysis work products.

C Test design work products

D . Test monitoring and control work products

- A. 1-A.2-D.3-C.4-e
- B. 1-A.2-C.3-B.4-D
- C. 1-B. 2-D, 3-A.4-C
- D. 1-C, 2-A. 3-D, 4-B

**Answer: A**

### NEW QUESTION # 360

In a two-hour uninterrupted test session, performed as part of an iteration on an Agile project, a heuristic checklist was used to help the tester focus on some specific usability issues of a web application.

The unscripted tests produced by the tester's experience during such session belong to which one of the following testing quadrants?

- A. Q3
- B. Q2
- C. Q1
- D. Q4

**Answer: A**

#### Explanation:

The unscripted tests produced by the tester's experience during the two-hour test session belong to the testing quadrant Q3. The testing quadrants are a classification of testing types based on two dimensions: the test objectives (whether the testing is focused on supporting the team or critiquing the product) and the test basis (whether the testing is based on the technology or the business). The testing quadrants are labeled as Q1, Q2, Q3, and Q4, and each quadrant represents a different testing perspective, such as unit testing, acceptance testing, usability testing, or performance testing. The testing quadrant Q3 corresponds to the testing types that have the objective of critiquing the product from the business perspective, such as exploratory testing, usability testing, user acceptance testing, alpha testing, beta testing, etc. The unscripted tests performed by the tester in the given scenario are examples of exploratory testing and usability testing, as they are based on the tester's experience, intuition, and learning of the web application, and they focus on some specific usability issues, such as the user interface, the user satisfaction, the user feedback, etc. The other options are incorrect, because:

\* The testing quadrant Q1 corresponds to the testing types that have the objective of supporting the team from the technology perspective, such as unit testing, component testing, integration testing, system testing, etc. These testing types are usually performed by developers or testers who have access to the source code, the design, the architecture, or the configuration of the software system, and they aim to verify the functionality, the quality, and the reliability of the software system at different levels of integration.

\* The testing quadrant Q2 corresponds to the testing types that have the objective of supporting the team from the business perspective, such as functional testing, acceptance testing, story testing, scenario testing, etc. These testing types are usually performed by testers or customers who have access to the requirements, the specifications, the user stories, or the business processes of the software system, and they aim to validate that the software system meets the expectations and the needs of the users and the stakeholders.

\* The testing quadrant Q4 corresponds to the testing types that have the objective of critiquing the product from the technology perspective, such as performance testing, security testing, reliability testing, compatibility testing, etc. These testing types are usually performed by testers or specialists who have access to the tools, the metrics, the standards, or the benchmarks of the software system, and they aim to evaluate the non-functional aspects of the software system, such as the efficiency, the security, the reliability, or the compatibility of the software system under different conditions or environments. #### NEW QUESTION # 361

.....

Our ISTQB-CTFL study guide design three different versions for all customers. These three different versions include PDF version, software version and online version, they can help customers solve any problems in use, meet all their needs. Although the three major versions of our ISTQB-CTFL exam dumps provide a demo of the same content for all customers, they will meet different unique requirements from a variety of users based on specific functionality. The most important feature of the online version of our ISTQB-CTFL Learning Materials are practicality. The online version is open to all electronic devices, which will allow your device to have common browser functionality so that you can open our products. At the same time, our online version of the ISTQB-CTFL study guide can also be implemented offline, which is a big advantage that many of the same educational products are not able to do on the market at present.
