

# EMT Reasonable Exam Price | EMT Valid Test Vce

Without a doubt, there is one thing that can assist them with perceiving this interest and clearing their Emergency Medical Technicians Exam (EMT) exam with flying colors. NREMT EMT dumps merge all that gigantic and the competitor doesn't require to purchase the aide or different books to review. They have this test material and need nothing else for planning Emergency Medical Technicians Exam exam.

## There are the Problems in taking the Test Prep EMT Exam

The NREMT focuses on many technologies that's why it is getting more and more fame in the Medical sector within a short span. Therefore by this increases the difficulty of passing the NREMT exam. Candidates should pass the NREMT in order to survive in the Medical field. ActualTestsIT provides latest and valid NREMT Certified questions. This **Test Prep EMT exam dumps** have been verified and reviewed by the EMT professionals and experts. ActualTestsIT provides what others won't provide you. ActualTestsIT **Test Prep EMT exam dumps** have the latest and verified questions which will be asked in the real exam. ActualTestsIT offers you authentic NREMT questions. Apart from this we also provide the Test Prep EMT Practice Test which includes all the practice questions for the NREMT exam, **Test Prep EMT exam dumps** that will ensure 100% passing surety and the simple user interface of NREMT practice test. Our hired professionals who passed their EMT well contribute to making **Test Prep EMT exam dumps** updated with NREMT new questions to ensure candidates to clear their NREMT certification at first attempt. Candidates can achieve the best result in the NREMT they need to experience the types of NREMT question they will be asked to answer and prepare for the NREMT test from **Test Prep EMT exam dumps** for each and every topic.

## 100% Pass 2026 The Best NREMT EMT: Emergency Medical Technicians Exam Reasonable Exam Price

There is no doubt that the EMT certification can help us prove our strength and increase social competitiveness. Although it is not an easy thing for some candidates to pass the exam, but our EMT question torrent can help aggressive people to achieve their goals. This is the reason why we need to recognize the importance of getting the test EMT Certification. Now give me a chance to know our EMT study tool before your payment, you can just free download the demo of our EMT exam questions on the web.

### NREMT Emergency Medical Technicians Exam Sample Questions (Q45-Q50):

#### NEW QUESTION # 45

An 18-year-old patient is 40 weeks pregnant, and delivery is imminent. Which of the following actions should the EMT anticipate performing for the newborn? Select the three answer options that are correct.

- A. Stimulating
- B. Initiating chest compressions
- C. Suctioning
- D. Warming
- E. Drying
- F. Providing ventilations

**Answer: A,D,E**

Explanation:

The correct answers are A. Drying, B. Warming, and D. Stimulating.

These are the initial routine care steps for a newborn immediately after delivery and are performed on all newborns to promote breathing and prevent hypothermia.

Drying the newborn prevents heat loss and also provides mild stimulation to initiate breathing.

It is one of the first steps immediately after birth.

Newborns are highly susceptible to hypothermia.

Keeping the baby warm (blankets, skin-to-skin contact) is essential for normal physiological function.

Gentle stimulation (rubbing the back, flicking the soles of the feet) helps initiate spontaneous breathing.

C). Suctioning # Only performed if airway is obstructed or secretions are present, not routinely E). Providing ventilations # Only if the newborn is not breathing adequately F). Initiating chest compressions # Only if heart rate is < 60 bpm despite adequate ventilation Exact Extracts:

"Initial newborn care includes drying, warming, and stimulating the infant."

"Routine suctioning is not required unless the airway is obstructed."

"Ventilations and compressions are only indicated if the newborn is not breathing or has a low heart rate." References:

National EMS Education Standards - Childbirth and Newborn Care

NREMT Candidate Handbook - Patient Management

#### NEW QUESTION # 46

During transport, an 86-year-old patient becomes unresponsive. The airway is open, and the patient has adequate spontaneous breathing. How should an EMT position this patient?

- A. Fowler
- B. Recovery
- C. Supine
- D. Trendelenburg

**Answer: B**

Explanation:

The correct answer is C. Recovery.

This patient is:

- \* Unresponsive
- \* Has an open airway
- \* Is breathing adequately

This meets the criteria for placement in the recovery position (lateral recumbent position).

Why C is correct (Recovery position):

The recovery position is used to:

- \* Maintain a patent airway
- \* Allow secretions or vomit to drain
- \* Reduce the risk of aspiration

NREMT-aligned guidance states:

- \* "Unresponsive patients with adequate breathing should be placed in the recovery position."
- \* "This position helps protect the airway and prevents aspiration."

Why the other options are incorrect:

- \* A. Supine: Increases risk of airway obstruction and aspiration.
- \* B. Fowler: Used for conscious patients with breathing difficulty, not unresponsive patients.
- \* D. Trendelenburg: Not recommended; may impair breathing and does not improve outcomes.

Exact Extracts:

- \* "Place unresponsive breathing patients in the recovery position."
- \* "This helps maintain airway patency and allows drainage of secretions."
- \* "Airway protection is a priority in unresponsive patients."

#### NEW QUESTION # 47

A 9-year-old patient who was injured in an MCI is brought to the treatment area with a delayed triage tag. Which of the following signs or symptoms would the EMT expect to find? Select the three correct options.

- A. Palpable pulses being present
- B. Follows simple commands
- C. Ability to ambulate
- D. Mottled skin
- E. Respiratory rate of 16
- F. Breathing only after opening the airway

**Answer: A,B,C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

In pediatric START or JumpSTART triage, a "delayed" status is appropriate if the child is breathing adequately, has palpable pulses, and follows commands. The respiratory rate of 16 is normal for a 9-year-old, and being able to walk also supports the "delayed" tag.

"Mottled skin" and "breathing only after airway opening" would more likely lead to "immediate" or even "expectant" categories depending on associated symptoms.

PALS Provider Manual (American Heart Association)

#### NEW QUESTION # 48

A 61-year-old patient has a change in mental status and unilateral weakness that began suddenly about half an hour ago. What other sign or symptom would the EMT expect in this patient?

- A. Jaundice
- B. Dysphasia
- C. Petechiae

- D. Wheals

**Answer: B**

Explanation:

The correct answer is D because this patient's sudden change in mental status and one-sided weakness strongly suggest an acute stroke/CVA. Another commonly expected stroke finding is speech difficulty, including dysphasia/aphasia. The CDC lists stroke warning signs as sudden numbness or weakness on one side of the body and sudden confusion, trouble speaking, or difficulty understanding speech. (CDC)

#### NEW QUESTION # 49

A 42-year-old patient with a history of COPD has exertional dyspnea. The patient has a productive cough with green-tinged sputum. Which additional findings should the EMT expect to see with this patient? Select the two answer options that are correct.

- A. Stridor
- B. A rash
- C. Dependent edema
- D. Crackles
- E. Hot, moist skin

**Answer: C,D**

Explanation:

The correct answers are C. Crackles and E. Dependent edema.

This patient has a history of chronic obstructive pulmonary disease (COPD) with signs suggesting a respiratory infection or exacerbation (productive cough with green sputum).

C). Crackles - Correct

Crackles (rales) are commonly heard in COPD patients, especially during exacerbations or when infection (such as bronchitis or pneumonia) is present.

NREMT-aligned material states:

\* "Abnormal breath sounds such as wheezes and crackles may be present in patients with lower airway disease." Crackles indicate:

- \* Fluid or mucus in the airways
- \* Impaired gas exchange

E). Dependent edema - Correct

Patients with long-standing COPD may develop cor pulmonale (right-sided heart failure) due to chronic hypoxia.

This leads to:

- \* Fluid retention
- \* Swelling in the lower extremities (dependent edema)

NREMT-aligned guidance:

\* "Chronic lung disease can lead to right-sided heart failure, resulting in peripheral edema." Why the other options are incorrect:

- \* A. A rash: Not associated with COPD.
- \* B. Stridor: Indicates upper airway obstruction, not lower airway disease like COPD.
- \* D. Hot, moist skin: More consistent with fever or heat illness, not a typical COPD finding.

Key NREMT Concepts:

- \* COPD = lower airway disease # wheezes, crackles
- \* Chronic COPD # cor pulmonale # dependent edema

Exact Extracts:

\* "COPD is characterized by lower airway obstruction and abnormal breath sounds."

\* "Crackles may be present due to fluid or mucus in the lungs."

\* "Chronic hypoxia can lead to right-sided heart failure and peripheral edema." References:
