## Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q109-Q114):

### NEW QUESTION # 109

A monolithic application was recently migrated to AWS and is now running on a single Amazon EC2 instance. Due to application limitations, it is not possible to use automatic scaling to scale out the application. The chief technology officer (CTO) wants an automated solution to restore the EC2 instance in the unlikely event the underlying hardware fails. What would allow for automatic recovery of the EC2 instance as quickly as possible?

- A. Configure AWS CloudTrail to monitor the health of the EC2 instance, and if it becomes impaired, trigger instance recovery.
- B. Configure an Amazon CloudWatch alarm to trigger an SNS message that alerts the CTO when the EC2 instance is impaired.
- **C. Configure an Amazon CloudWatch alarm that triggers the recovery of the EC2 instance if it becomes impaired.**
- D. Configure an Amazon EventBridge event to trigger an AWS Lambda function once an hour that checks the health of the EC2 instance and triggers instance recovery if the EC2 instance is unhealthy.

**Answer: C**

### NEW QUESTION # 110

Can resource record sets in a hosted zone have a different domain suffix (for example, www.blog.acme.com and www.acme.ca)?

- A. Yes, it can have for a maximum of three different TLDs.
- B. Yes, it can have depending on the TLD.
- **C. No**
- D. Yes

**Answer: C**

Explanation:

The resource record sets contained in a hosted zone must share the same suffix. For example, the example.com hosted zone can contain resource record sets for www.example.com and www.aws.example.com subdomains, but it cannot contain resource record sets for a www.example.ca subdomain.

### NEW QUESTION # 111

Your supervisor has asked you to build a simple file synchronization service for your department. He doesn't want to spend too much money and he wants to be notified of any changes to files by email. What do you think would be the best Amazon service to use for the email solution?

- A. Amazon SWF
- B. Amazon CloudSearch
- C. Amazon AppStream
- **D. Amazon SES**

**Answer: D**

Explanation:

File change notifications can be sent via email to users following the resource with Amazon Simple Email Service (Amazon SES), an easy-to-use, cost-effective email solution.

### NEW QUESTION # 112

A company is storing data that will not be frequently accessed in the AWS Cloud. If the company needs to access the data, the data must be retrieved within 12 hours. The company wants a solution that is cost-effective for storage costs per gigabyte.

Which Amazon S3 storage class will meet these requirements?

- A. S3 Standard
- B. S3 One Zone-Infrequent Access (S3 One Zone-IA)
- C. S3 Standard-Infrequent Access (S3 Standard-IA)
- **D. S3 Glacier Flexible Retrieval**

**Answer: D**

Explanation:

Amazon S3 Glacier Flexible Retrieval is designed for long-lived, infrequently accessed data where retrieval times of minutes to hours are acceptable. It offers very low storage cost per GB while still supporting faster retrieval than archival tiers that can take many hours or days.

The requirement states that data is rarely accessed and must be retrievable within 12 hours. Glacier Flexible Retrieval meets this retrieval-time requirement and is more cost-effective per GB than Standard and Infrequent Access storage classes for long-term, rarely accessed data.

S3 Standard, S3 Standard-IA, and S3 One Zone-IA are optimized for more frequent or lower-latency access and have higher storage cost per GB compared to Glacier Flexible Retrieval.

### NEW QUESTION # 113

In EC2, what happens to the data in an instance store if an instance reboots (either intentionally or unintentionally)?

- A. Data is partially present in the instance store.
- **B. Data persists in the instance store.**
- C. Data is deleted from the instance store for security reasons.
- D. Data in the instance store will be lost.

**Answer: B**

Explanation:

The data in an instance store persists only during the lifetime of its associated instance. If an instance reboots (intentionally or unintentionally), data in the instance store persists. However, data on instance store volumes is lost under the following circumstances.

Failure of an underlying drive

Stopping an Amazon EBS-backed instance

Terminating an instance
