Topic 3	<ul style="list-style-type: none"><li>• Understand ChromeOS tenets: It discusses ChromeOS best practices and customers on chromeOS tenets.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>• Understand ChromeOS security processes: It focuses on deploying certificates and uChromeOS policies.</li></ul>

## Google Professional ChromeOS Administrator Exam Sample Questions (Q65-Q70):

### NEW QUESTION # 65

You need to create a recovery image on a USB stick. Which two steps should you take?  
(Choose 2 answers)

- A. Go to google.com/chromebooks
- B. Go to Google Play store
- C. Go to Chrome Web Store on a Chrome device**
- D. Install Chrome Recovery Utility and download the image for the correct device model to a USB stick.**
- E. Go to Device Settings.

**Answer: C,D**

Explanation:

Creating a recovery image for ChromeOS involves using the Chrome Recovery Utility, which is available in the Chrome Web Store. This tool allows users to create a recovery USB drive by downloading the necessary OS image and writing it to the USB stick.

Verified Answer from Official Source:

The correct answers are verified from the ChromeOS Recovery Guide, which specifies the use of the Chrome Recovery Utility from the Chrome Web Store.

"To create a ChromeOS recovery image, download the Chrome Recovery Utility from the Chrome Web Store.

Follow the on-screen instructions to create a recovery USB stick."

The Recovery Utility is the recommended method for creating a USB recovery device, ensuring compatibility and correctness of the OS image.

Objectives:

- \* Perform system recovery for ChromeOS devices.
- \* Utilize official recovery tools.

### NEW QUESTION # 66

Your leadership team would like to verify that all ChromeOS devices are restarted to apply the new update as quickly as possible. You have 2000 devices and your Admin console is configured with automatic updates enabled. What can you do to ensure the restart with the least amount of admin effort?

- A. Ask Human Resources to create and send out a company memo asking everyone to restart their devices within 24 hours
- B. In the Admin console, in 'Device Settings', under 'AutoUpdate Settings', configure 'Device Updates' to 'Allow updates'
- C. In 'User and Browser Settings', under 'Chrome Updates', configure 'Relaunch Notifications' to "Force relaunch after a period" and enter a time period in hours**
- D. Manually connect to each device using Chrome Remote Desktop and restart the device

**Answer: C**

Explanation:

To ensure that devices are restarted to apply updates efficiently, use the "Force relaunch after a period" setting within User and Browser Settings under Chrome Updates. This setting will automatically prompt users to restart their devices after the specified period.

Verified Answer from Official Source:

The correct answer is verified from the Google Admin Console Update Management Guide, which recommends configuring relaunch notifications to enforce updates.

"To ensure timely application of updates, set 'Relaunch Notifications' to 'Force relaunch after a period' within User and Browser Settings." This automated method reduces manual effort and guarantees that updates are applied promptly across the fleet.

Objectives:

- \* Enforce device updates efficiently.
- \* Utilize automated relaunch policies for ChromeOS devices.

### NEW QUESTION # 67

You have been tasked with selecting a 3rd party IdP to allow logging into ChromeOS devices. Your ChromeOS devices are displaying an "Unable to sign in to Google" message. How should you troubleshoot this?

- A. Disable the SSO connection in the Google Admin console
- B. Apply the SSO certificate to the ChromeOS device
- C. Check Multi-Factor Authentication for the user account in the Google Admin console
- D. **Ensure the Identity provider is using an SAML compliant connection**

#### Answer: D

Explanation:

The error message "Unable to sign in to Google" in the context of 3rd party IdP login typically points towards an issue with the SAML (Security Assertion Markup Language) connection. SAML is the standard protocol used for authentication between ChromeOS devices and external identity providers.

Here's a breakdown of troubleshooting steps:

- \* Verify SAML Compliance: The most critical step is to ensure that the 3rd party IdP is configured correctly to use SAML 2.0 and is adhering to the required SAML attributes and formatting.
- \* Check IdP Configuration: Review the SAML configuration settings in both the Google Admin console (under Security > Set up single sign-on (SSO) with a third party IdP) and the 3rd party IdP's administration portal. Ensure that the entity IDs, SSO URLs, and certificate information match exactly.
- \* Test SAML Connection: Use a SAML testing tool (e.g., SAML Tracer) to simulate the login process and inspect the SAML assertions. This can help pinpoint any errors or inconsistencies in the SAML response.
- \* Google Admin Console Logs: Check the Google Admin console logs for any relevant error messages related to the SAML authentication process.
- \* Contact IdP Support: If the issue persists, reach out to the support team of your 3rd party IdP for further assistance. They may have specific troubleshooting steps or logs to help diagnose the problem.

References:

- \* Set up single sign-on (SSO) with a third party IdP: <https://support.google.com/a/answer/60224>

### NEW QUESTION # 68

Your hardware OEM issues a recall for a safety issue. You need to deprovision devices from management before returning to the OEM. They will replace your existing ChromeOS devices with a different model.

Which option should you choose when deprovisioning to make sure you can reuse your Chrome Education/Enterprise Upgrade and remain compliant?

- A. Same model replacement
- B. **Different model replacement**
- C. ChromeOS Flex upgrade transfer
- D. Retiring from fleet

#### Answer: B

Explanation:

When deprovisioning ChromeOS devices for a hardware recall and replacement with different models, choosing the "Different model replacement" option is crucial to retain the Chrome Education/Enterprise Upgrade license compliance. This option ensures that the license is transferred to the new device correctly, avoiding any compliance issues or the need to repurchase licenses.

Here's why this option is important:

- \* License Transfer: It specifically designates the deprovisioning as being due to a hardware replacement with a different model. This triggers the system to transfer the license to the new device upon enrollment.
- \* Compliance: It maintains the compliance of your Chrome Education/Enterprise Upgrade licenses, ensuring you don't violate any licensing terms.
- \* Cost Savings: It avoids the need to purchase new licenses for the replacement devices, saving your organization money.

### NEW QUESTION # 69

What is the recommended way to provision users from an on-prem Active Directory environment into the Google Admin console?

- A. Azure AD Google Cloud/G Suite Connector
- B. Admin SDK Directory API
- **C. Google Cloud Directory Sync**
- D. Upload via CSV

**Answer: C**

Explanation:

The "Deprovision" command is specifically designed to remove a ChromeOS device from management policy updates. This means the device will no longer receive updates, configurations, or restrictions pushed from the Google Admin console.

Here's what happens when you deprovision a device:

- \* Policy Removal: All enterprise policies and configurations are removed from the device.
- \* Management Removal: The device is disassociated from the Google Admin console and no longer considered managed.
- \* Data Wipe (Optional): You can choose to wipe the device's data during deprovisioning to ensure no company data remains. Other options like "Reset," "Disable," or "Powerwash" may have different effects:
  - \* Reset: Resets the device to factory settings but might not remove management if not done through the Admin console.
  - \* Disable: Prevents the user from signing in but doesn't remove policies or management.
  - \* Powerwash: Factory resets the device, removing all user data and configurations, including management.

**NEW QUESTION # 70**

.....

We have applied the latest technologies to the design of our ChromeOS-Administrator test prep not only on the content but also on the displays. As a consequence you are able to keep pace with the changeable world and remain your advantages with our ChromeOS-Administrator training materials. Besides, you can consolidate important knowledge of ChromeOS-Administrator Exam for you personally and design customized study schedule or to-do list on a daily basis. The last but not least, our after-sales service can be the most attractive project in our ChromeOS-Administrator guide torrent.
