## **How to Prepare For Snowflake DAA-C01 Exam Questions?**

itPass4sure exam dumps have two version-PDF and SOFT version which will give you convenient. It is very convenient for you to use PDF real questions and answers. And you can download these materials and print it out for study at any time. The SOFT version simulates the real exam which will give you more realistic feeling. When you are faced with the real exam, you can pass Snowflake DAA-C01 test easily.

## Snowflake SnowPro Advanced: Data Analyst Certification Exam Sample Questions (Q40-Q45):

### NEW QUESTION # 40

You are working with a table 'ORDERS' containing order data, and a table 'CUSTOMER SEGMENTS' containing customer segment information. The 'ORDERS' table has columns 'ORDER ID', 'CUSTOMER ID', and 'ORDER AMOUNT'. The 'CUSTOMER SEGMENTS' table has columns 'CUSTOMER ID', 'SEGMENT ID', and 'SEGMENT NAME'. You need to create a query that enriches the 'ORDERS' table with the customer segment information. However, a customer can belong to multiple segments. You want to include all segments a customer belongs to in the enriched data, resulting in potentially multiple rows per order if the customer is in multiple segments. The output should include 'ORDER ID', 'ORDER AMOUNT', 'SEGMENT ID', and 'SEGMENT NAMES'. Which SQL statement would correctly enrich the ORDERS table without losing any order information, even if customers belong to multiple segments?

- A.

```
SELECT o.ORDER_ID, o.ORDER_AMOUNT, cs SEGMENT_ID, cs SEGMENT_NAME FROM ORDERS o LEFT JOIN CUSTOMER_SEGMENTS cs ON o.CUSTOMER_ID = cs.CUSTOMER_ID;
```

- B.

```
SELECT o.ORDER_ID, o.ORDER_AMOUNT, cs SEGMENT_ID, cs SEGMENT_NAME FROM ORDERS o INNER JOIN CUSTOMER_SEGMENTS cs ON o.CUSTOMER_ID = cs.CUSTOMER_ID;
```

- C.

```
SELECT o.ORDER_ID, o.ORDER_AMOUNT, cs SEGMENT_ID, cs SEGMENT_NAME FROM ORDERS o INNER JOIN CUSTOMER_SEGMENTS cs ON o.CUSTOMER_ID = cs.CUSTOMER_ID GROUP BY o.ORDER_ID;
```

- D.

```
SELECT o.ORDER_ID, o.ORDER_AMOUNT, cs SEGMENT_ID, cs SEGMENT_NAME FROM ORDERS o RIGHT JOIN CUSTOMER_SEGMENTS cs ON o.CUSTOMER_ID = cs.CUSTOMER_ID;
```

- E.

```
SELECT o ORDER_ID, o ORDER_AMOUNT, cs SEGMENT_ID, cs SEGMENT_NAME FROM ORDERS o CROSS JOIN CUSTOMER_SEGMENTS cs ON o.CUSTOMER_ID = cs.CUSTOMER_ID;
```

### Answer: B

#### Explanation:

An 'INNER JOIN' is the correct choice here. It will return all matching rows between the 'ORDERS' and tables based on the 'CUSTOMER ID'. If a customer belongs to multiple segments, each segment will be returned in a separate row associated with the order. "LEFT JOIN" includes rows from the left table even without a match in the right table which is not needed. 'GROUP BY' in the INNER JOIN will combine multiple segments with 'ORDER\_IDS' into one row, which is not needed as all segment names are expected. The subquery approach would only return one segment name per order. 'RIGHT JOIN' include all customer segments on the right which is also not needed.

### NEW QUESTION # 41

Which action aids in performing a diagnostic analysis on historical data to identify reasons/causes of anomalies?

- A. Collecting related data and demographics
- B. Analyzing data solely from the past month
- C. Focusing on isolated data points
- D. Ignoring statistical trends in historical data

### Answer: A

#### Explanation:

Collecting related data and demographics is crucial in understanding the reasons/causes of anomalies in historical data.

### NEW QUESTION # 42

You are tasked with building a dashboard that visualizes website traffic data stored in Snowflake. The data includes daily unique visitors, bounce rate, and average session duration. The business stakeholders want to understand the correlation between these metrics. They also want to identify any outliers or anomalies. Which chart type is BEST suited for identifying correlation and outliers in this dataset?

- A. A histogram showing the distribution of individual Metrics.
- B. A scatter plot matrix showing the pairwise relationships between all metrics.
- C. A bar chart comparing the average values of each metric.
- D. A pie chart showing the percentage contribution of each metric to the total.
- E. A line chart showing each metric over time.

**Answer: B**

Explanation:

A scatter plot matrix displays the pairwise relationships between multiple variables. This allows for easy identification of correlations (positive, negative, or none) and outliers in the data. Line charts are good for showing trends over time, but not for directly visualizing correlations between different metrics. Bar charts compare average values, and pie charts show proportions. Histograms help to show single distribution only.

**NEW QUESTION # 43**

What complexities might arise when identifying and resolving data import errors in Snowflake?

(Select all that apply)

- A. Handling only specific error types
- B. **Analyzing error logs for resolution**
- C. Resolving data inconsistencies
- D. Identifying error sources

**Answer: B,C,D**

Explanation:

Identifying and resolving data import errors involves challenges related to identifying error sources, resolving inconsistencies, and analyzing logs for resolution, which might be complex depending on the nature of the errors.

**NEW QUESTION # 44**

Configuring subscriptions and updates in a dashboard tool primarily helps in:

- A. Reducing the size of the data
- B. **Ensuring users receive the latest data**
- C. Enhancing the security of the data
- D. Changing the dashboard layout

**Answer: B****NEW QUESTION # 45**

.....

itPass4sure is one of the leading platforms that has been helping SnowPro Advanced: Data Analyst Certification Exam (DAA-C01) exam candidates for many years. Over this long time period we have helped SnowPro Advanced: Data Analyst Certification Exam (DAA-C01) exam candidates in their preparation. They got help from itPass4sure Snowflake DAA-C01 Practice Questions and easily got success in the final Snowflake DAA-C01 certification exam. You can also trust Snowflake DAA-C01 exam dumps and start preparation with complete peace of mind and satisfaction.
