Plat-Admn-202 Key Concepts & Exam Plat-Admn-202 Collection Pdf

When you try our part of Salesforce certification Plat-Admn-202 exam practice questions and answers, you can make a choice to our ValidBraindumps. We will be 100% providing you convenience and guarantee. Remember that making you 100% pass Salesforce Certification Plat-Admn-202 Exam is ValidBraindumps.

Salesforce Certified Platform App Builder Sample Questions (Q44-Q49):

NEW QUESTION # 44

Universal Containers has two types of applicants, hourly and salary. There are separate record types for each. While all members of

the human resource department need to be able to view all applicant records, only the hiring Manager and VP of HR should be able to create salary applicant records.

What should the app builder recommend to meet this requirement?

- A. Update the org-wide default to private and create a sharing rule for the role of recruiting manager.
- B. Configure the hourly record type as the default and instruct non-management users to accept the default record type.
- **C. Create a permission set containing the salary record type and assign it to the appropriate users.**
- D. Remove "create" permission for the salary applicant object for everyone except the manager and VP.

Answer: C

Explanation:

A permission set containing the salary record type and assigning it to the appropriate users would allow only those users to create salary applicant records, while still allowing all users to view all applicant records. This is the most granular and flexible way to meet the requirement

NEW QUESTION # 45

Cloud Kicks (CK) wants to set up a custom child object to track gift cards issued to a customer. A key requirement is to track the total number of gift cards opened and gift cards issued on an Account. CK wants to permanently ensure the gift cards are unable to be moved across any other Account once it is created.

On the gift card object, what type of field should be created to support this requirement?

- A. Formula
- **B. Master-detail relationship**
- C. Roll-up summary
- D. Lookup relationship

Answer: B

Explanation:

The app builder should create a master-detail relationship field on the gift card object to support the requirement. A master-detail relationship field creates a parent-child relationship between two objects, where the master record controls certain behaviors of the detail record. In this case, the Account object would be the master and the gift card object would be the detail. By creating a master-detail relationship field, the app builder can meet these requirements:

Track the total number of gift cards opened and gift cards issued on an Account: This can be done by creating roll-up summary fields on the Account object that count or sum up the values from the gift card records related to each account.

Permanently ensure the gift cards are unable to be moved across any other Account once it is created: This can be done by making the master-detail relationship field required on the gift card object, which means that every gift card record must be associated with an account record and cannot be changed once set. Option B, C, and D are not types of fields that can support this requirement.

NEW QUESTION # 46

Northern Trail Outfitters uses a custom object to track travel requests. Rangers want to have automatic posts on a record whenever a travel request has been approved.

Which feature should be used to accomplish this?

- **A. Feed tracking**
- B. Feed quick action
- C. Workflow rule
- D. Auto-response rule

Answer: A

Explanation:

To have automatic posts on a record whenever a travel request has been approved, feed tracking should be used. Feed tracking enables field updates to be displayed in the Chatter feed of a record or a user profile. Users can follow records or users to see updates in their own feed. Feed tracking can be enabled for standard or custom objects and selected fields.

NEW QUESTION # 47

Universal Containers would like to automatically assign a specific permission set to new users. How can this requirement be met?
Choose 2 Answers

- **A. Create a lightning process on the user object to launch a flow.**
- B. Create a workflow rule on the User object to assign a permission set.
- **C. Create a flow on the user object to assign a permission set.**
- D. Create an approval process on the User object to assign a permission set

Answer: A,C

Explanation:

A flow or a process can be used to assign a permission set to new users. A flow can be triggered by a record change or an invocable action, while a process can launch a flow as an immediate or scheduled action

NEW QUESTION # 48

Universal Containers (UC) tracks Account locations in Zip Code, a custom text field with a validation rule to enforce proper formatting of the US ZIP+4 code for UC's orders.

What formula should the app builder create on Order to display only the first five digits of Zip Code from the parent Account?

- A. BEGINS(Account.Zip_Code__r, 5)
- **B. LEFT(Account.Zip_Code__c, 5)**
- C. TEXT(Account.Zip_Code__c, 5)
- D. LPAD(Account.Zip_Code__r, 5)

Answer: B

Explanation:

LEFT(Account.Zip_Code__c, 5) is the correct formula to display only the first five digits of Zip Code from the parent Account. LEFT function returns the specified number of characters from the left side of a text string. Account.Zip_Code__c is the custom text field that stores the Zip Code on Account object. 5 is the number of characters to return from the left side of the Zip Code. The other options are not valid formulas or functions.

NEW QUESTION # 49

.....

In the past ten years, we always hold the belief that it is dangerous if we feel satisfied with our Plat-Admn-202 study engine and stop renovating. Luckily, we still memorize our initial determination. We are proud that our Plat-Admn-202 learning questions are so popular in the market. Please remember that all experiences will become your valuable asset in life. And it is never too late to learn more and something new. Just buy our Plat-Admn-202 Exam Braindumps, you will find that you can reach your dream easily.
