

最新更新Web-Development-Applications考試心得|第一次嘗試輕鬆學習並通過考試和熱門的Web-Development-Applications測試

BONUS!!! 免費下載PDFExamDumps Web-Development-Applications考試題庫的完整版: <https://drive.google.com/open?id=1glhDwjZ-Ogl7atCbHPpW3qzn4EA6Gs0p>

彰顯一個人在某一領域是否成功往往體現在他所獲得的資格證書上，在IT行業也不外如是。所以現在很多人都選擇參加Web-Development-Applications資格認證考試來證明自己的實力。但是要想通過Web-Development-Applications資格認證卻不是一件簡單的事。不過只要你找對了捷徑，通過考試也就變得容易許多了。這就不得不推薦PDFExamDumps的考試考古題了，它可以讓你少走許多彎路，節省時間幫助你考試合格。

WGU Web-Development-Applications 考試大綱：

主題	簡介
主題 1	• Validation, Testing, and Form Development: This section of the exam measures skills of Web Developers and covers the ability to validate code, test web pages for accuracy, and build form components. It includes understanding how to detect errors, ensure compliance with standards, and implement form fields with inline validation to improve user experience. The focus is on creating forms that work reliably, meet usability expectations, and maintain proper data entry flow.
主題 2	• Responsive Web Design (RWD) for Browsers and Apps: This section of the exam measures skills of Front-End Designers and covers concepts related to mobile-first layout planning, responsive frameworks, and techniques used to ensure compatibility with modern browsers and applications. Candidates must demonstrate how to adjust elements for better usability on mobile devices and apply responsive strategies that allow a single design to function seamlessly across various environments.
主題 3	• Creating Adaptive Web Documents and Pages: This section of the exam measures skills of Front-End Designers and covers the techniques needed to make websites display correctly across traditional desktops and mobile devices. It emphasizes adaptive page layout, flexible formatting, and user-friendly presentation so that content remains readable and functional on screens of different sizes. Candidates are expected to show an understanding of how to create consistent designs that respond smoothly to device changes.
主題 4	• HTML5, CSS3, and JavaScript Foundations: This section of the exam measures skills of Web Developers and covers the essential ability to manually code using HTML5, CSS3, and JavaScript to create structured, visually styled, and interactive web content. It focuses on building accurate page layouts, applying modern styling rules, and writing basic scripts that support user interaction. The aim is to ensure candidates can construct professional web documents using current standards and properly integrate all three technologies.

最新更新的Web-Development-Applications考試心得 & 保證WGU Web-Development-Applications考試成功與優質的Web-Development-Applications測試

如果你還在為 WGU的Web-Development-Applications考試認證而感到煩惱，那麼你就選擇PDFExamDumps培訓資料網站吧，PDFExamDumps WGU的Web-Development-Applications考試培訓資料無庸置疑是最好的培訓資料，選擇它是你最好的選擇，它可以保證你百分百通過考試獲得認證。來吧，你將是未來最棒的IT專家。

最新的 Courses and Certificates Web-Development-Applications 免費考試真題 (Q76-Q81):

問題 #76

Which HTML tag should a developer use to create a drop-down list?

- A. <Output>
- **B. <Select>**
- C. <Option>
- D. <Section >

答案： B

解題說明：

The<select>tag is used in HTML to create a drop-down list. It is used in conjunction with the<option>tags to define the list items within the drop-down menu.

* Purpose of<select>: The<select>element is used to create a control that provides a menu of options.

The user can select one or more options from the list.

* Structure of Drop-down List:

* The<select>element encloses the<option>elements.

* Each<option>element represents an individual item in the drop-down list.

* Usage Example:

```
<label for="cars">Choose a car:</label>
<select id="cars" name="cars">
  <option value="volvo">Volvo</option>
  <option value="saab">Saab</option>
  <option value="fiat">Fiat</option>
  <option value="audi">Audi</option>
</select>
```

In this example, the<select>tag creates a drop-down list with four options: Volvo, Saab, Fiat, and Audi.

* Attributes of<select>:

* name: Specifies the name of the control, which is submitted with the form data.

* id: Used to associate the<select>element with a label using the<label>tag'sforattribute.

* multiple: Allows multiple selections if set.

問題 #77

Which attribute displays help text in an input field without specifying an actual value for the input?

- **A. Placeholder**
- B. Default
- C. name
- D. For

答案： A

解題說明：

The placeholder attribute in an <input> element displays help text in the input field without specifying an actual value for the input. This text disappears when the user starts typing.

* Placeholder Attribute: This attribute provides a hint to the user about what type of information is expected in the field.

* Usage Example:

```
<input type="text" placeholder="Enter your name">
```

The input field will show "Enter your name" as help text.

References:

* MDN Web Docs on placeholder

* W3C HTML Specification on Input Placeholder

問題 #78

Which property should a developer use to ensure that a background image appears only once?

- A. background-repeat
- B. background-size
- C. background-origin
- D. background-clip

答案： A

解題說明：

> "The 'background-repeat' property in CSS defines how background images are repeated. To prevent a background image from repeating, use 'background-repeat: no-repeat;'. "

>

> "The default value is 'repeat', which tiles the image both horizontally and vertically unless otherwise specified." References:

* MDN Web Docs: background-repeat

* CSS Backgrounds and Borders Module

問題 #79

Which element attaches an external CSS document to a web page?

- A. <Meta>
- B. <Link>
- C. <style>
- D. <Script>

答案： B

解題說明：

To attach an external CSS document to a web page, the <link> element is used within the <head> section of the HTML document.

* <link> Element:

* Purpose: Links external resources, such as stylesheets, to the HTML document.

* Attributes:

* rel="stylesheet": Specifies the relationship between the current document and the linked resource.

* href="path/to/stylesheet.css": Specifies the URL of the external stylesheet.

* Example:

```
<head>
```

```
<link rel="stylesheet" href="styles.css">
```

```
</head>
```

* Other Options:

* <style>: Used to embed internal CSS directly within the HTML document, not for linking external CSS.

* <script>: Used to embed or link to JavaScript files.

* <meta>: Provides metadata about the HTML document, not for linking stylesheets.

* References:

* W3C HTML5 Specification - The link element

* MDN Web Docs - <link>

By using the <link> element correctly, you can ensure that your web page is styled with external CSS, maintaining a separation of

concerns and making your HTML more manageable.

問題 #80

Given the following code:

```
<!DOCTYPE html>
<html>
<body>

<h1 id="id1">Blog Title</h1>

<button type="button"
onclick="document.getElementById('id1').style.color = 'red'">
Click Here</button>

</body>
</html>
```

What is occurring?

- A. An event handler is tracking keyboard strokes.
- **B. JavaScript is using the DOM to make a style change.**
- C. In-line CSS is styling the <h1> tag.

答案: B

解題說明:

The given code snippet demonstrates how JavaScript can manipulate the DOM to change the style of an element.

* Code Analysis:

* Given the HTML:

```
<h1 id="id1">Blog Title</h1>
```

```
<button type="button" onclick="document.getElementById('id1').style.color = 'red'">Click Here</button>
```

* When the button is clicked, the JavaScript code within the onclick attribute changes the color of the h1 element to red.

* Explanation:

* Option A: An event handler tracking keyboard strokes is incorrect because the event handler is tracking a mouse click, not keyboard strokes.

* Option B: JavaScript is using the DOM to make a style change is correct because the onclick attribute contains JavaScript code that modifies the style of the h1 element.

* Option C: In-line CSS is styling the <h1> tag is incorrect because the style change is done via JavaScript, not inline CSS.
