- A. Queries data from multiple tables
- B. Provides custom functions
- C. Creates inner joins
- D. Avoids manipulation of process data

Answer: B,D

Explanation:
The SQL Query Editor in SAP Signavio Process Intelligence allows users to write custom queries to analyze process data. The documentation details its capabilities:
* Exact Extract:"The SQL Query Editor in SAP Signavio Process Intelligence provides:
* Protection against data manipulation by restricting queries to read-only operations.
* Support for custom functions to perform advanced calculations or data transformations within queries." (SAP Signavio Process Intelligence User Guide, section on "SQL Query Editor Features").
* Explanation:
* Option B (Avoids manipulation of process data):The SQL Query Editor is designed to ensure data integrity by allowing only read-only queries, preventing accidental or unauthorized changes to the underlying process data.
* Option D (Provides custom functions):Users can define custom functions within the SQL Query Editor to perform specific calculations or transformations, such as aggregating data in unique ways or applying complex logic.
* Option A (Queries data from multiple tables)is incorrect because, while the editor can query data, it typically operates on a single event log or case attributes table within an investigation, not multiple unrelated tables.
* Option C (Creates inner joins)is incorrect as inner joins are not a primary feature of the SQL Query Editor in Process Intelligence, which focuses on querying pre-structured process data.
