

Free Demo: 100% Cisco 350-501 Exam Questions

DOWNLOAD the newest Dumpexams 350-501 PDF dumps from Cloud Storage for free: <https://drive.google.com/open?id=1xp5IR1xTR-fHLu5lqi-BkRtKfMXgnWk>

It is our company that can provide you with special and individual service which includes our 350-501 preparation quiz and good after-sale services. Our experts will check whether there is an update on the question bank every day, so you needn't worry about the accuracy of study materials. If there is an update system, we will send them to the customer automatically. As is known to all, our 350-501 simulating materials are high pass-rate in this field, that's why we are so famous. If you are still hesitating, our 350-501 exam questions should be wise choice for you.

Requirements

There are no strict requirements to follow if you want to go for the Cisco 350-501 test, but you need to understand one simple thing. Any students should ace the exam content to be able to answer all the required questions during the test. On the other hand, if you have about 3-5 years of experience, you can opt for these options as well. Thus, it will be much easier for you to absorb new details and prove your skills. However, it doesn't mean that you can avoid preparing for the exam.

The 350-501 certification exam covers a range of topics, including network architecture, virtualization, automation, security, and troubleshooting. Candidates must demonstrate their proficiency in designing, implementing, and managing complex network solutions using Cisco technologies. Achieving this certification is a valuable achievement for professionals who are looking to demonstrate their expertise in service provider networking and advance their careers in this field.

Cisco 350-501 Exam is an online-based test that includes multiple-choice questions, simulations, and drag-and-drop exercises. 350-501 exam is 120 minutes long, and the passing score is 825 out of 1000. 350-501 exam fee is \$400, and the registration process can be done through the Pearson VUE website.

One of the Best Ways to Prepare For the Cisco 350-501 Certification Exam

You can easily get Cisco 350-501 certified if you prepare with our Cisco 350-501 questions. Our product contains everything you need to ace the 350-501 certification exam and become a certified Cisco professional. So what are you waiting for? Purchase this updated Cisco 350-501 Exam Practice material today and start your journey to a shining career.

Cisco Implementing and Operating Cisco Service Provider Network Core Technologies Sample Questions (Q503-Q508):

NEW QUESTION # 503

Refer to the exhibit. A network administrator implemented MPLS routing between routers R1, R2, R3, and R4. AToM is configured between R1 and R4 to allow Layer 2 traffic from hosts on RA1 and RA2. A targeted MPLS session is established

between R1 and R4. Which additional action must the administrator take on all routers so that LDP synchronization occurs between connected LDP sessions?

- **A. Disable the MPLS LDP IGP sync holddown.**
- B. Enable MPLS LDP sync delay timers.
- C. Configure EIGRP as the routing protocol using stub areas only.
- D. Configure OSPF or IS-IS as the routing protocol.

Answer: A

NEW QUESTION # 504

Refer to the exhibit.

□ A Cisco engineer is implementing gRPC dial-out on an ASR. Receiver 192.168.1.1 will be assigned one of the subscriptions, and it will manage the ASR. Which command is needed to complete the router configuration?

- A. protocol any
- B. protocol grpc
- C. protocol all
- **D. protocol tcp**

Answer: D

Explanation:

In this scenario, gRPC dial-out mode is being used for telemetry. The receiver with IP address 192.168.1.1 will be assigned one of the subscriptions and will manage the ASR. To configure this, the router needs to use the protocol tcp command. This ensures that telemetry data is streamed out over a TCP connection to the specified receiver. Other options (A, B, and D) are not relevant for this specific use case.

NEW QUESTION # 505

Refer to the exhibit:

□ Assume all other configurations are correct and the network is otherwise operating normally. Which conclusion can you draw about the neighbor relationship between routers R1 and R2?

- **A. The neighbor relationship is down because R1 believes R2 is in AS 65012.**
- B. The neighbor relationship is down because the local I-as value for R2 is missing in the R1 neighbor statement
- C. The neighbor relationship will be up only if the two devices have activated the correct neighbor relationships under the IPv4 address family
- D. The neighbor relationship is up

Answer: A

Explanation:

The configuration for R1 indicates a BGP neighbor relationship with a device in AS 65012. However, R2 is actually in AS 65000, leading to a mismatch in AS numbers. This discrepancy will prevent the establishment of a BGP neighbor relationship between R1 and R2.

NEW QUESTION # 506

Refer to the exhibit:

□ Which condition must be met by the OSPF peer of router R1 before the two devices can establish communication?

- A. The OSPF peer must be configured as an OSPF stub router
- B. The OSPF peer must use clear-text authentication
- C. The interface on the OSPF peer may have a different key ID, but it must use the same key value as the configured interface
- **D. The interface on the OSPF peer must use the same key ID and key value as the configured interface**

Answer: D

NEW QUESTION # 507

Refer to the exhibit:

After implementing a new design for the network, a technician reviews the pictured CLI output as part of the MOP. Which two statements describe what the technician can ascertain from the ImpNull output? (Choose two.)

- A. Label 0 is used for the prefix displayed but will not be part of the MPLS label stack for packets destined for 192.168.10.10.
- B. Label 3 is in use for the prefix displayed and will be part of the MPLS label stack for packets destined for 192.168.10.10
- C. Label 0 is used for the prefix displayed and will be part of the MPLS label stack for packets destined for 192.168.10.10
- D. Penultimate Hop Popping is in use for the prefix displayed
- E. Ultimate Hop Popping is in use for the prefix displayed.

Answer: A,D

Explanation:

The term 'ImpNull' in the CLI output indicates that Label 0, also known as the "Implicit Null" label, is used for the prefix displayed. This label instructs the penultimate router in an MPLS network to pop the label before forwarding the packet to the ultimate hop, which is the egress router. Therefore, Label 0 will not be part of the MPLS label stack for packets destined for 192.168.10.10 (Option A). This process is known as Penultimate Hop Popping (PHP) and is used to optimize the forwarding process by reducing one level of lookup at the egress router (Option D).

For more detailed information, please refer to the MPLS section in the Implementing and Operating Cisco Service Provider Network Core Technologies (SPCOR) course materials.

NEW QUESTION # 508

.....

Free update for 350-501 Study Guide materials are available, that is to say, in the following year, you can get the latest information about the 350-501 exam dumps without spending extra money. In addition, 350-501 study guide of us is compiled by experienced experts, and they are quite familiar with the dynamics of the exam center, so that if you choose us, we can help you to pass the exam just one time, in this way, you can save your time and won't waste your money. We also have online and offline chat service stuff, if any other questions, just contact us.
