Microsoft GH-100 Dumps Torrent | Answers GH-100 Real Questions

Whereas the Microsoft GH-100 PDF Dumps file is concerned, this file is simply a collection of real, valid, and updated GitHub Administration (GH-100) exam questions that also help you in preparation. So choose the right Actual4Cert exam questions format and start GH-100 Exam Preparation today. Order your GH-100 Dumps now to Avail 25% EXTRA Discount on the GH-100 Exam Dumps learning material and get your dream certification.

Microsoft GitHub Administration Sample Questions (Q45-Q50):

NEW QUESTION # 45

Which of the following accurately contrasts a GitHub App and a GitHub Action?

- A. GitHub Actions are limited to reading repository content only
- B. GitHub Apps can only be used inside .github/workflows
- C. GitHub Apps run only on GitHub-provided virtual machines, while GitHub Actions run only on customer-hosted machines
- D. GitHub Actions can only be used to respond to events within a single repository while GitHub Apps can respond to events from multiple repositories

Answer: D

Explanation:

GitHub Actions workflows are defined and triggered within a single repository's context, whereas GitHub Apps are installed at the organization or user level and can subscribe to events across multiple repositories.

NEW QUESTION # 46

Which of the following is true about outside collaborators in a GitHub organization?

- A. They appear in the organization's internal member list.
- B. They have access to all private repositories by default.
- C. They inherit organization-wide policies, such as SSO requirements.
- D. They are granted explicit access to specific repositories.

Answer: D

Explanation:

Outside collaborators aren't organization members; instead, they're granted explicit access - at read, write, or admin level - to only the repositories you choose.

NEW QUESTION # 47

When a user becomes a member of multiple GitHub organizations, which THREE of the following are important considerations for administrators? (Choose three.)

- A. The user will have different permission levels in each organization.
- B. The user's personal repositories will become accessible to all organizations.
- C. The user will automatically have the same role across all organizations.
- D. The user will need to authorize credentials separately for each SAML-enabled organization.
- E. The user's profile information becomes private to non-organization members.
- F. The user's repository access and/or team membership needs to be managed separately for each organization.

Answer: A,D,F

Explanation:

A user's repository access and team memberships are scoped to each organization, so admins must configure permissions separately per org.

When an organization enforces SAML SSO, each member must authorize their personal access tokens or SSH keys for that org, requiring separate approval for each SAML-enabled organization. Roles and permission levels (owner, member, billing manager, repository roles, etc.) are assigned on a per-organization basis, so a user often has different permissions in different organizations.

NEW QUESTION # 48

What is the potential consequence of enabling multiple rulesets that apply to the same branch in a repository?

- A. Only the most recently created ruleset will be enforced
- B. All applicable rulesets will be evaluated, and their combined rules enforced
- C. Only organization-level rulesets are enforced over repository-level ones
- D. Rulesets will override each other, leading to unpredictable behavior

Answer: B

Explanation:

If you enable multiple rulesets that target the same branch, GitHub will evaluate every matching ruleset and enforce the aggregate of their rules - so all constraints from all applicable rulesets apply.

NEW QUESTION # 49

Which practice helps avoid service disruption when consuming GitHub APIs at scale?

- A. Ignoring secondary rate limits
- B. Using multiple tokens to bypass limits

- C. Designing your application to work within GitHub's rate limits
- D. Caching all API responses permanently

Answer: C

Explanation:

Designing your integration to stay within GitHub's documented rate limits-by batching requests, using conditional requests, handling 429 responses with back-off, and monitoring the X-RateLimit-* headers - ensures you won't be temporarily throttled or cut off when you hit secondary limits.

NEW QUESTION # 50

.....

Nowadays, using computer-aided software to pass the GH-100 exam has become a new trend. Because the new technology enjoys a distinct advantage, that is convenient and comprehensive. In order to follow this trend, our company product such a GH-100 exam questions that can bring you the combination of traditional and novel ways of studying. The passing rate of our study material is up to 99%. If you are not fortune enough to acquire the GH-100 Certification at once, you can unlimitedly use our product at different discounts until you reach your goal and let your dream comes true.
