New InsuranceSuite-Analyst Practice Materials, New InsuranceSuite-Analyst Test Experience

We strongly advise you to buy our windows software of the InsuranceSuite-Analyst study materials, which can simulate the real test environment. There is no doubt that you will never feel bored on learning our InsuranceSuite-Analyst practice materials because of the smooth operation. You will find that learning is becoming interesting and easy. During the operation of the InsuranceSuite-Analyst Study Materials on your computers, the running systems of the InsuranceSuite-Analyst study guide will be flexible, which saves you a lot of troubles and help you concentrate on study.

Guidewire Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam Sample Questions (Q33-Q38):

NEW QUESTION # 33

_____ requirements are based on federal and/or state legislation that impact the project.

- A. Privacy
- B. National Legislative
- C. Business
- **D. Regulatory**

Answer: D

Explanation:

In Guidewire InsuranceSuite implementations, regulatory requirements are those driven by federal, state, or regional legislation that directly impact how insurance products are configured, processed, and administered.

Therefore, Option A - Regulatory is the correct answer.

Regulatory requirements arise from laws and regulations governing insurance operations, such as rating rules, policy wording mandates, claims handling timelines, reporting obligations, and compliance with state-specific insurance departments. These requirements are non-negotiable and must be met to ensure legal compliance and avoid penalties or operational risk.

From an analyst perspective, regulatory requirements must be clearly identified and documented during requirements gathering and elaboration. They often influence product model configuration, business rules, validations, workflows, and reporting. In Guidewire projects, regulatory requirements frequently vary by jurisdiction, making them especially important for multi-state or multi-region implementations.

The other options are less accurate. Privacy requirements (Option B) are a subset of regulatory concerns but focus specifically on data protection and confidentiality rather than broader insurance legislation. "National Legislative" (Option C) is not a standard classification used in Guidewire methodology. Business requirements (Option D) reflect organizational goals and operational needs, not legal mandates.

Properly identifying regulatory requirements ensures that Guidewire InsuranceSuite configurations align with legal obligations and that compliance is built into the system from the outset rather than retrofitted later. This is a critical responsibility of the Business Analyst in regulated insurance environments.

NEW QUESTION # 34

Identify which of the following are phases in the Guidewire Project Lifecycle:

- **A. Deployment**
- B. Maintenance
- C. Delivery
- **D. Inception**
- **E. Development**
- F. Initiation

Answer: A,D,E

Explanation:

The Guidewire implementation methodology (SurePath) structures the project lifecycle into distinct phases to ensure value delivery and risk management. Based on the InsuranceSuite Analyst documentation, the correct phases from your list are:

* Inception (C): This is the initial phase of the project execution (following Pre-Inception). The primary goals are to confirm the scope, produce the initial backlog of user stories, finalize the project plan, and obtain agreement on the Minimum Viable Product (MVP).

* Development (F): This is the iterative "Construction" phase. It is divided into multiple Sprints. During this phase, the team configures the application, develops integration points, and conducts unit testing to turn user stories into working software.

* Deployment (D): This phase focuses on moving the application from the test environment to the Production environment. It includes final "Deployment Prep" activities such as data migration, performance tuning, user training, and the actual "Go-Live" event.

Why the other options are incorrect:

- * A. Maintenance: While "Support & Maintenance" occurs after the project, it is considered the operational lifecycle (BAU) rather than a core implementation project phase.
- * B. Delivery: This is the overarching term for the entire engagement (e.g., "Guidewire Delivery Methodology") but is not a specific phase name itself.
- * E. Initiation: Guidewire terminology uses "Pre-Inception" or "Inception" rather than the generic PMI term "Initiation."

NEW QUESTION # 35

Knowing application logic helps non-developers define and document the business logic requirements for: (Choose two)

- A. Rule conditions and actions
- B. APIs
- C. Application processing flow
- D. Data dictionaries

Answer: A,C

Explanation:

A basic understanding of application logic enables non-developers—such as Business Analysts—to effectively define and document how the system should behave in response to business scenarios. The correct answers are Options B and D.

Understanding application logic helps analysts define the application processing flow (Option B). This includes how data moves through the system, when activities are created, how statuses change, and what actions are triggered at various points in a workflow. Analysts use this knowledge to document future-state processes and ensure Guidewire supports end-to-end business scenarios. It also helps analysts clearly define rule conditions and actions (Option D). Analysts frequently specify when a rule should apply and what outcome should occur, such as assigning work, displaying messages, or enforcing validations. While developers implement these rules in Gosu, analysts must document the business logic accurately.

The remaining options are less relevant. Data dictionaries (Option A) describe data structures rather than behavior. APIs (Option C) are technical integration constructs typically designed by developers and architects.

By understanding application logic concepts, analysts produce clearer, more actionable requirements that reduce ambiguity and improve implementation quality.

NEW QUESTION # 36

Story huddles are used to clarify functional requirement details and typically involve collaboration among which three required project team members?

- A. Developers
- B. Business Analysts
- C. Product Owners
- D. Quality Analysts
- E. Subject Matter Experts

Answer: A,B,D

NEW QUESTION # 37

Please select User Story Card best practices from the list below. (Choose two)

- A. Include field requirements in the UI Mock-up tab
- B. Change a requirement number after the story card has been published
- C. Include a requirement number for traceability
- D. Review every requirement with the team

Answer: C,D

Explanation:

Guidewire SurePath emphasizes consistency, clarity, and traceability when documenting User Story Cards.

Two key best practices that support these principles are including requirement numbers for traceability and reviewing every requirement with the team, making Options C and D correct.

Including a requirement number (Option C) is a critical best practice because it enables end-to-end traceability. Requirement numbers

allow analysts to link business requirements to user stories, acceptance criteria, test cases, defects, and final delivery. This is especially important in regulated insurance environments and large Guidewire programs where scope control and auditability are essential.

Reviewing every requirement with the team (Option D) ensures shared understanding across Business Analysts, Developers, and Quality Analysts. These reviews help identify gaps, assumptions, and ambiguities early, reducing rework and defects later in the project. This collaborative approach aligns with Agile and Guidewire's emphasis on early validation.

The remaining options are not best practices. Field-level requirements should be documented in requirement or rules sections, not embedded in UI mockup tabs (Option A). Changing requirement numbers after publication (Option B) breaks traceability and creates confusion across dependent artifacts.

NEW QUESTION # 38

.....

After cracking the Associate Certification - InsuranceSuite Analyst - Mammoth Proctored Exam (InsuranceSuite-Analyst) exam you will receive the credential badge. It will pave your way toward well-paying jobs or promotions in any reputed tech company.
