Perfect New PDI Dumps Pdf Covers the Entire Syllabus of PDI

As a prestigious platform offering practice material for all the IT candidates, Prep4King experts try their best to research the best valid and useful Salesforce PDI exam dumps to ensure you 100% pass. The contents of PDI exam training material cover all the important points in the PDI Actual Test, which can ensure the high hit rate. You can instantly download the Salesforce PDI practice dumps and concentrate on your study immediately.

Salesforce PDI Certification Exam is a comprehensive test that assesses an individual's ability to develop and customize Salesforce applications. PDI exam covers a broad range of topics, including Apex programming language, Visualforce pages, data modeling, and security. It requires a solid understanding of the Salesforce platform and the ability to apply that knowledge to real-world scenarios. Those who pass the exam will have demonstrated their ability to design and develop custom applications that meet the unique needs of their organization.

Salesforce Platform Developer I (PDI) Sample Questions (Q108-Q113):

NEW QUESTION # 108

What are three capabilities of the `<ltng : require>` tag when loading JavaScript resources in Aura components?

Choose 3 answers

- A. Loading scripts In parallel
- B. Loading externally hosted scripts
- C. Specifying loading order
- D. One-time loading for duplicate scripts
- E. Loading files from Documents

Answer: A,C,D

NEW QUESTION # 109

A developer creates a batch Apex job to update a large number of records, and receives reports of the job timing out and not completing.

What is the first step towards troubleshooting the issue?

- A. Decrease the batch size to reduce the load on the system.
- **B. Check the asynchronous job monitoring page to view the job status and logs.**
- C. Check the debug logs for the batch job.
- D. Disable the batch job and recreate it with a smaller number of records.

Answer: B

NEW QUESTION # 110

A developer needs to make a custom Lightning Web Component available in the Salesforce Classic user interface. Which approach can be used to accomplish this?

- A. Use a Visualforce page with a custom controller to invoke the Lightning Web Component using a call to an Apex method.
- B. Embed the Lightning Web Component in a Visualforce Component and add directly to the page layout.
- **C. Use the Lightning Out JavaScript library to embed the Lightning Web Component in a Visualforce page and add to the page layout.**
- D. Wrap the Lightning Web Component in an Aura Component and surface the Aura Component as a Visualforce tab.

Answer: C

Explanation:

To make a Lightning Web Component (LWC) available in Salesforce Classic, you can embed it in a Visualforce page using Lightning Out.

Option D: Use the Lightning Out JavaScript library to embed the Lightning Web Component in a Visualforce page and add to the page layout.

Lightning Out allows LWCs to be embedded in Visualforce pages.

The Visualforce page can then be included in Salesforce Classic interfaces.

Why Not Other Options:

Option A: Visualforce components cannot directly contain LWCs.

Option B: Wrapping an LWC in an Aura component and surfacing it as a Visualforce tab doesn't make it available on page layouts.

Option C: You cannot invoke an LWC from a Visualforce page using an Apex method call.

Reference:

Lightning Out for Visualforce:

"Lightning Out is a feature that extends Lightning components to any web page. Use it to embed Lightning web components in a Visualforce page."

- Lightning Web Components Dev Guide: Use Lightning Web Components in Visualforce Pages

NEW QUESTION # 111

How can a developer refer to, or instantiate a PageReference in Apex? Choose 2 answers

- **A. By using the Page object and a Visualforce page name.**
- B. By using the PageReference.Page() method with a partial or full URL.
- C. By using the ApexPages.Page() method with a Visualforce page name.
- **D. By using a PageReference with a partial or full URL.**

Answer: A,D

NEW QUESTION # 112

As part of new feature development, a developer is asked to build a responsive application capable of responding to touch events, that will be executed on stateful clients.

Which two technologies are built on a framework that fully supports the business requirement? Choose 2 answers
