## EMC Dell Information Storage and Management Foundations v2 Exam Sample Questions (Q31-Q36):

### NEW QUESTION # 31

Question:

A Fibre Channel switch has eight ports, and all ports must be operational from 6 AM to 6 PM, Monday through Friday. However, a failure of Port 4 occurs within the week as follows:

- \* Monday: 11 AM to 1 PM
  - \* Wednesday: 5 PM to 10 PM
  - \* Thursday: 7 AM to 10 AM
  - \* Saturday: 11 AM to 1 PM
- What is the availability of Port 4 in that week?

- A. 81.6%
- B. 90%

- C. 86.7%
- D. 80%

**Answer: C**

Explanation:

Total operational hours required: 12 hours/day × 5 days = 60 hours

Total downtime during required hours:

\* Monday: 2 hours

\* Wednesday: 1 hour (only 5 PM to 6 PM counts)

### NEW QUESTION # 32

Question:

(Refer to exhibit diagram)

The diagram shows a SAN zoning configuration with three zones: Zone 1 (Mixed), Zone 2 (WWN), and Zone 3 (Port). Which zoning type is used in Zone 2?

- A. No zoning
- B. Mixed zoning
- C. Port zoning
- D. WWN zoning

**Answer: D**

Explanation:

WWN zoning uses the World Wide Names (unique identifiers) of devices (HBAs and targets) to define zone membership.

Offers flexibility: devices can be moved to different ports without reconfiguring zoning.

Common in modern SAN environments.

\* Port zoning uses physical port numbers for zone membership.

\* Mixed zoning combines port and WWN methods.

\* No zoning would not segment traffic.

### NEW QUESTION # 33

Question:

What is an advantage of deploying intelligent storage systems in the data center?

- A. Migrates data from a data center to the cloud at no cost
- B. Enables efficient and optimized storage and management of information
- C. Reduces the complexity of managing information by creating silos of storage
- D. Reduces the amount of data to replicate, migrate, and back up

**Answer: B**

Explanation:

Intelligent storage systems incorporate advanced features like automated tiering, deduplication, and compression. These features enable efficient storage utilization and optimized management by automating data placement and reducing manual intervention.

\* Option A: While intelligent systems may facilitate cloud integration, they do not guarantee cost-free migration.

\* Option B: Data reduction features help, but the primary advantage is broader efficiency and optimization.

\* Option C: Creating silos increases complexity; intelligent systems aim to unify and simplify storage management.

### NEW QUESTION # 34

Question:

An IT team needs to connect a compute system to a switch in their SAN. What is the port type?

- A. N\_port
- **B. F\_port**
- C. G\_port
- D. E\_Port

**Answer: B**

Explanation:

An F\_port (Fabric port) is used on a Fibre Channel switch to connect N\_ports (Node ports) on end devices like servers and storage arrays.

\* N\_port: On the compute system (HBA).

\* F\_port: On the switch, accepting N\_port connections.

\* E\_port: For switch-to-switch ISL (Inter-Switch Link) connections.

\* G\_port: A generic port that can operate as either an F\_port or an E\_port (not the direct answer in this scenario).

Reference: Dell Information Storage and Management Foundations 2023 Study Guide, Section: FC SAN Ports.

### NEW QUESTION # 35

Question:

A backup array was able to achieve a 30:1 reduction by finding multiple copies of the same data. Which method was used in this scenario?

- A. Data compression
- B. Data replication
- **C. Data deduplication**
- D. Data encryption

**Answer: C**

Explanation:

Data deduplication is a technique that eliminates redundant copies of data, storing only unique instances.

When multiple copies of the same data are found, deduplication replaces them with references to a single stored copy, significantly reducing storage requirements.

\* Data replication: Involves copying data to another location for redundancy, not reducing storage size.

\* Data encryption: Secures data but doesn't affect storage size.

\* Data compression: Reduces data size by encoding information more efficiently but doesn't eliminate duplicates.
