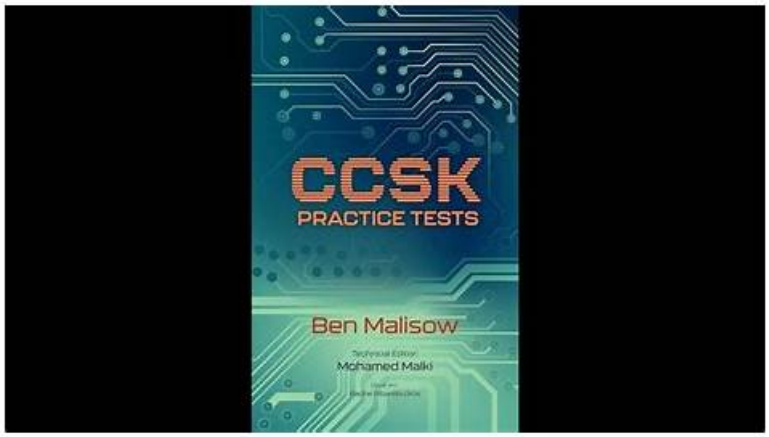
Exam CCSK Online | CCSK Practice Tests



P.S. Free & New CCSK dumps are available on Google Drive shared by Braindumpsqa: https://drive.google.com/open?id=1-XeaofD-4O3z6npFm-w2EkP_LX5JeBgx

Our experts are not slavish followers who just cut and paste the content into our CCSK practice materials, all CCSK exam questions are elaborately compiled by them. Just a small amount of money, but you can harvest colossal success with potential bright future. So we have the courage and justification to declare the number one position in this area, and choosing CCSK Actual Exam is choosing success.

The CCSK exam is based on the CSA's "Security Guidance for Critical Areas of Focus in Cloud Computing" and is updated regularly to reflect changes in the cloud security landscape. The latest version of the exam, CCSK v4.0, covers topics such as cloud architecture, data security, compliance, and risk management. CCSK exam consists of 60 multiple-choice questions that must be completed within 90 minutes.

CCSK Practice Tests - CCSK Reliable Test Answers

Similarly, Braindumpsqa offers up to 1 year of free Cloud Security Alliance CCSK exam questions updates if in any case, the content of Certificate of Cloud Security Knowledge v5 (CCSKv5.0) (CCSK) certification test changes. Braindumpsqa provides its product in three main formats i.e., Cloud Security Alliance CCSK Dumps PDF, Web-Based Certificate of Cloud Security Knowledge v5 (CCSKv5.0) (CCSK) Practice Test, and Desktop CCSK Practice Exam Software.

Cloud Security Alliance Certificate of Cloud Security Knowledge v5 (CCSKv5.0) Sample Questions (Q285-Q290):

NEW QUESTION # 285
Which of following responsibilities can never be transferred. even during cloud adoption?

- A. Application Development
- B. Infrastructure
- C. Governance
- D. Security

Answer: C

Explanation:
The primary issue to remember when governing cloud computing is that an organization can never outsource responsibility for governance, even when using external providers. This is always true, cloud or not, but is useful to keep in mind when navigating cloud computing's concepts of shared responsibility models Ref: CSA Security Guidelines V4.0

NEW QUESTION # 286

Why is it important to control traffic flows between networks in a cybersecurity context?

- A. To reduce the amount of data stored
- B. To simplify network architecture
- C. To increase the speed of data transmission
- D. To reduce the blast radius of attacks

Answer: D

Explanation:
Controlling traffic flows between networks is critical in a cybersecurity context toreduce the blast radius of attacks. By segmenting networks and implementing controls such as firewalls, organizations can limit the lateral movement of attackers, containing breaches and minimizing their impact.
From theCCSK v5.0 Study Guide, Domain 9 (Network Security), Section 9.2:
"Controlling traffic flows between networks is a fundamental cybersecurity practice to reduce the blast radius of attacks. Network segmentation and micro-segmentation limit an attacker's ability to move laterally within the environment, containing breaches and protecting critical assets." Option B (To reduce the blast radius of attacks) is the correct answer.
* Option A (To increase the speed of data transmission) is incorrect because traffic control focuses on security, not speed.
* Option C (To simplify network architecture) is incorrect because segmentation may increase complexity.
* Option D (To reduce the amount of data stored) is incorrect because traffic control does not directly affect data storage.

NEW QUESTION # 287
A company plans to shift its data processing tasks to the cloud. Which type of cloud workload best describes the use of software emulations of physical computers?

- A. Virtual Machines (VMs)
- B. Platform as a Service (PaaS)
- C. Serverless Functions (FaaS)
- D. Containers

Answer: A

Explanation:
The correct answer isD. Virtual Machines (VMs). In the context of cloud computing,Virtual Machines (VMs)are software-based emulations of physical computers. They run an operating system (OS) and applications just like a physical machine would. VMs are often hosted on physical servers using hypervisors, which allow multiple VMs to run on a single physical machine, thereby sharing resources like CPU, memory, and storage.
Why Virtual Machines (VMs) are Suitable for Data Processing:
Full OS Environment:VMs provide a complete operating system environment, making them suitable for running complex data processing tasks that require specific OS configurations.
Isolation:Each VM operates independently, providing isolation between different workloads, which is essential when processing sensitive or diverse data sets.
Scalability:Cloud providers offer VM scaling options to meet the demands of data processing workloads.
Compatibility:VMs can run legacy applications that may not be compatible with newer cloud-native technologies.
Why Other Options Are Incorrect:
A . Platform as a Service (PaaS):PaaS provides a platform for developing and deploying applications without managing underlying infrastructure. It is not directly related to VM-based processing.
B . Serverless Functions (FaaS):Serverless computing abstracts the infrastructure and is used for running discrete functions rather than emulating entire machines.
C . Containers:Containers package applications and dependencies but share the host OS kernel. They are lightweight compared to VMs and do not fully emulate physical computers.
Real-World Example:
If a company moves a data processing application that was traditionally run on an on-premises physical server to the cloud, they might choose VMs on services like AWS EC2, Azure Virtual Machines, or Google Compute Engine to maintain the same OS environment and application compatibility.

as a Service (IaaS) Domain

NEW QUESTION # 288
To understand their compliance alignments and gaps with a cloud provider, what must cloud customers rely on?

- A. EDiscovery tools
- B. Provider run audits and reports
- C. Provider and consumer contracts
- D. Provider documentation
- E. Third-party attestations

Answer: E

NEW QUESTION # 289
ENISA: A reason for risk concerns of a cloud provider being acquired is:

- A. Provider may change physical location
- B. Resource isolation may fail
- C. Arbitrary contract termination by acquiring company
- D. Mass layoffs may occur
- E. Non-binding agreements put at risk

Answer: E

NEW QUESTION # 290
.....

We develop many reliable customers with our high quality CCSK prep guide. When they need the similar exam materials and they place the second even the third order because they are inclining to our CCSK study braindumps in preference to almost any other. Compared with those uninformed exam candidates who do not have effective preparing guide like our CCSK study braindumps, you have already won than them. Among wide array of choices, our products are absolutely perfect. Besides, from economic perspective, our CCSK Real Questions are priced reasonably so we made a balance between delivering satisfaction to customers and doing our own jobs. So in this critical moment, our CCSK prep guide will make you satisfied.
