Latest ISO-IEC-27001-Lead-Implementer Demo, Detail ISO-IEC-27001-Lead-Implementer Explanation

The PECB ISO-IEC-27001-Lead-Implementer certification exam has grown in popularity in today's modern PECB era. Success in the ISO-IEC-27001-Lead-Implementer exam gives aspirants the chance to upskill and remain competitive in the challenging job market. Those who successfully crack the PECB Certified ISO/IEC 27001 Lead Implementer Exam (ISO-IEC-27001-Lead-Implementer) test prove to their employers that they are skilled enough to get well-paying jobs and promotions. Exam4Docs is aware that preparing with invalid PECB ISO-IEC-27001-Lead-Implementer Exam Questions wastes money and time.

PECB ISO-IEC-27001-Lead-Implementer exam is a certification exam that assesses an individual's ability to implement an Information Security Management System (ISMS) based on the ISO/IEC 27001 standard. PECB Certified ISO/IEC 27001 Lead Implementer Exam certification is designed for individuals who are responsible for managing the implementation process of an ISMS, including IT professionals, business managers, and consultants. ISO-IEC-27001-Lead-Implementer Exam covers a range of topics related to the implementation of an ISMS, including risk assessment, security controls, and continuous improvement.

PECB Certified ISO/IEC 27001 Lead Implementer Exam Sample Questions (Q69-Q74):

NEW QUESTION # 69

An organization has implemented a control that enables the company to manage storage media through their life cycle of use, acquisition, transportation and disposal. Which control category does this control belong to?

- A. Organizational
- **B. Physical**
- C. Technological

Answer: B

Explanation:

According to ISO/IEC 27001:2022, the control that enables the organization to manage storage media through their life cycle of use, acquisition, transportation and disposal belongs to the category of physical and environmental security. This category covers the controls that prevent unauthorized physical access, damage and interference to the organization's information and information processing facilities. The specific control objective for this control is A.11.2.7 Secure disposal or reuse of equipment¹, which states that "equipment containing storage media shall be checked to ensure that any sensitive data and licensed software has been removed or securely overwritten prior to disposal or reuse."² References:

* ISO/IEC 27001:2022, Annex A

* ISO/IEC 27002:2022, clause 11.2.7

NEW QUESTION # 70

Which of the following standards provides the requirements and guidelines for establishing a privacy information management system (PIMS)?

- A. ISO/IEC 27009
- B. ISO/IEC 27011
- **C. ISO/IEC 27701**

Answer: C

NEW QUESTION # 71

Scenario 8: SunDee is an American biopharmaceutical company, headquartered in California, the US. It specializes in developing novel human therapeutics, with a focus on cardiovascular diseases, oncology, bone health, and inflammation. The company has had an information security management system (ISMS) based on ISO/IEC 27001 in place for the past two years. However, it has not monitored or measured the performance and effectiveness of its ISMS and conducted management reviews regularly. Just before the recertification audit, the company decided to conduct an internal audit. It also asked most of their staff to compile the written individual reports of the past two years for their departments. This left the Production Department with less than the optimum workforce, which decreased the company's stock.

Tessa was SunDee's internal auditor. With multiple reports written by 50 different employees, the internal audit process took much

longer than planned, was very inconsistent, and had no qualitative measures whatsoever Tessa concluded that SunDee must evaluate the performance of the ISMS adequately. She defined SunDee's negligence of ISMS performance evaluation as a major nonconformity, so she wrote a nonconformity report including the description of the nonconformity, the audit findings, and recommendations. Additionally, Tessa created a new plan which would enable SunDee to resolve these issues and presented it to the top management Based on scenario 8. did the nonconformity report include all the necessary aspects?

- A. No, the report must also specify the audit criteria
- **B. No, the report must also specify the root cause of the nonconformity**
- C. Yes, the report included all the necessary aspects

Answer: B

Explanation:

Explanation

According to ISO/IEC 27001:2022, a nonconformity report is a document that records the details of any deviation from the audit criteria that is identified during an audit². The audit criteria are the set of policies, procedures, requirements, or specifications that are used as a reference against which audit evidence is compared³. Therefore, a nonconformity report must include the following aspects:

The description of the nonconformity, which should clearly state what the deviation is, where it occurred, and when it was detected
The audit findings, which should provide the objective evidence that supports the identification of the nonconformity
The audit criteria, which should specify the reference document or standard that the nonconformity deviates from
The recommendations, which should suggest the possible corrective actions or improvements that can be taken to address the nonconformity
In scenario 8, Tessa's nonconformity report included the description of the nonconformity, the audit findings, and the recommendations, but it did not specify the audit criteria. Therefore, the report did not include all the necessary aspects and was incomplete.

- 2: ISO/IEC 27001:2022, Clause 3.23
- 3: ISO/IEC 27001:2022, Clause 3.5
- 4: ISO/IEC 27001:2022, Annex A.9.2.3

NEW QUESTION # 72

What risk treatment option has Company A implemented if it has required from its employees the change of email passwords at least once every 60 days?

- **A. Risk modification**
- B. Risk avoidance
- C. Risk retention

Answer: A

Explanation:

Risk modification is one of the four risk treatment options defined by ISO/IEC 27001, which involves applying controls to reduce the likelihood and/or impact of the risk. By requiring its employees to change their email passwords at least once every 60 days, Company A has implemented a risk modification option to reduce the risk of unauthorized access to its email accounts. Changing passwords frequently can make it harder for attackers to guess or crack the passwords, and can limit the damage if a password is compromised.

The other three risk treatment options are:

Risk avoidance: This option involves eliminating the risk source or discontinuing the activity that causes the risk. For example, Company A could avoid the risk of email compromise by not using email at all, but this would also mean losing the benefits of email communication.

Risk retention: This option involves accepting the risk and its consequences, either because the risk is too low to justify any treatment, or because the cost of treatment is too high compared to the potential loss. For example, Company A could retain the risk of email compromise by not implementing any security measures, but this would expose the company to potential breaches and reputational damage.

Risk transfer: This option involves sharing or transferring the risk to a third party, such as an insurer, a supplier, or a partner. For example, Company A could transfer the risk of email compromise by outsourcing its email service to a cloud provider, who would be responsible for the security and availability of the email accounts.
