Our latest PDII preparation materials can help you if you want to pass the PDII exam in the shortest possible time to master the most important test difficulties and improve learning efficiency. Also, by studying hard, passing a qualifying examination and obtaining a PDII certificate is no longer a dream. With these conditions, you will be able to stand out from the interview and get the job you've been waiting for. However, in the real time employment process, users also need to continue to learn to enrich themselves. To learn our PDII practice materials, victory is at hand.

Salesforce Certified Platform Developer II (PDII) exam is a challenging certification that measures your ability to design and develop custom solutions using Apex and Visualforce. Platform Developer II certification is intended for experienced developers who have a deep understanding of Salesforce's architecture and API capabilities. Passing the PDII exam demonstrates your proficiency in developing complex business solutions on the Salesforce platform and can help you advance your career as a Salesforce developer.

Salesforce PDII Certification Exam is a highly recognized certification for experienced Salesforce developers who specialize in building and deploying custom applications on the Salesforce platform. Platform Developer II certification is designed to test the candidate's technical knowledge and expertise in building scalable solutions that meet the business requirements of Salesforce clients. Salesforce PDII Certification demonstrates the candidate's ability to design, develop, test, and deploy custom applications that are capable of integrating with various Salesforce technologies.

Salesforce Certified Platform Developer II (PDII) is an advanced certification offered by Salesforce that validates the expertise of developers in building custom applications on the Salesforce platform. Platform Developer II certification is designed for experienced developers who have a deep understanding of the Salesforce platform, including its architecture, data model, security, and integration capabilities. The PDII exam tests the candidates on their ability to design and develop complex business logic, data models, and user interfaces using Apex, Visualforce, and Lightning Components.

Salesforce Platform Developer II Sample Questions (Q36-Q41):

NEW QUESTION # 36

Universal Containers has a Visualforce page that displays a table every Container__c being rented by a given Account. It is failing because some of the customers rent over 100,000 containers.

What should a developer change about the Visualforce page to help with the page load errors?

- A. Use lazy loading and a transient List variable.
- B. Implement pagination with an OffsetController.
- C. Implement pagination with a StandardSetController.
- D. Use JavaScript remoting with SOQL Offset.

Answer: C

NEW QUESTION # 37

A company uses Salesforce to sell products to customers. They also have an external product information management (PIM) system that is the system of record for products.

A developer received these requirements:

* Whenever a product is created or updated in the PIM, a product must be created or updated as a Product__c record in Salesforce and a PricebookEntry record must be created or updated automatically by Salesforce.

= The PricebookEntry should be created in a Pricebook2 that is specified in a custom setting.

What should the developer use to satisfy these requirements?

- A. Event Monitoring
- B. Invocable Action
- C. Custom Apex REST
- D. SOBJECT Tree REST

Answer: C

Explanation:

Custom Apex REST services are the optimal solution for integrating Salesforce with an external PIM system.

When a product is created or updated in the PIM, the external system can make a REST call to a custom Apex REST endpoint in Salesforce, which then can create or update the Product__c and PricebookEntry records. This method allows using custom settings to determine the Pricebook2 dynamically. References: Apex Developer Guide - Exposing Apex Classes as REST Web Services

NEW QUESTION # 38

A developer wishes to improve runtime performance of Apex calls by caching results on the client.

What is the best way to implement this?

- A. Set a cookie in the browser for use upon return to the page.
- B. Decorate the server-side method with @AuraEnabled(cacheable=true).
- C. Decorate the server-side method with @AuraEnabled(storable=true).
- D. Call the setStorable() method on the action in the JavaScript client-side code.

Answer: D

NEW QUESTION # 39

An org has a requirement that the Shipping Address on the Account must be validated by a third-party web service, before the Account is allowed to be inserted.

What is the optimal way to meet this requirement?

- A. Make a callout to the web service from a before insert trigger.
- B. Make a callout to the web service from a custom Visualforce controller.
- C. Make a callout to the web service from an after insert trigger.
- D. Make a callout to the web service from a standard Visualforce controller.

Answer: D

NEW QUESTION # 40

A developer has been asked to create code that will meet the following requirements: Receives input of Map<Id, Project __c>, List<Account> Performs a potentially long-running callout to an outside web service Provides a way to confirm that the process executed successfully Which asynchronous feature should be used?

- A. Database.AllowsCallouts interface
- **B. Queueable interface**
- C. Schedulable interface
- D. @future (callout=true)

Answer: B

NEW QUESTION # 41

.....
