Free PDF Quiz 2026 Updated Arch-303: Valid Salesforce Certified B2C Commerce Architect Mock Test

Under coordinated synergy of all staff, our Arch-303 guide materials achieved to a higher level of perfection by keeping close attention with the trend of dynamic market. They eliminated stereotypical content from our Arch-303 practice materials. And if you download our Arch-303 study quiz this time, we will send free updates for you one year long since we promise that our customers can enjoy free updates for one year.

Salesforce Certified B2C Commerce Architect Sample Questions (Q55-Q60):

NEW QUESTION # 55

A Retailer has a single storefront site and a Product Management System (PIM). The PIM is Generating the master catalog and storefront categorization catalog every day and it uploading them to SFTP how should the Architect configure the import job flows following the best practices?

- A. 1st flow is global to download the files from SFTP. 2nd flow is global to import the master catalog. 3rd flow is global to import the storefront catalog.
- B. 1st flow is assigned to the site to download the files from SFTP. 2nd flow is assigned to the site to import the master catalog. 3rd flow is global to import the storefront catalog.
- C. 1st flow is assigned to the site to download the files from SFTP. 2nd flow is assigned to the site to import the storefront catalog. 3rd flow is global to import the master catalog.
- **D. 1st flow is global to download the files from SFTP. 2nd flow is global to import the storefront catalog. 3rd flow is global to import the master catalog.**

Answer: D

Explanation:

For optimal job flow concerning data import from a PIM system, the sequence should begin with downloading files globally from an SFTP site, followed by importing data into the B2C Commerce platform:

* First flow: Download files, ensuring all required files are available and ready for import.

* Second flow: Import the storefront catalog which likely has dependencies on the master catalog but is generally smaller and can be updated more rapidly.

* Third flow: Import the master catalog, as it typically contains the foundational data needed for various site functionalities.

This sequence respects data dependency and integrity, ensuring that the storefront reflects the most current and accurate information after all relevant data is imported.

NEW QUESTION # 56

The Client plans to deploy a new payment provider and Order Management System on its existing B2C Commerce website. They have asked an Architect to advise which environment it should use to conduct load testing of its new integrations.

Which environment should be used as the ideal environment for this kind of load test?

- A. The Development Instance of a rental Realm
- B. The Production instance of the existing Realm
- C. The Production Instance of a rental Realm
- **D. The Development Instance of the existing Realm**

Answer: D

Explanation:

For conducting load testing of new integrations with a payment provider and Order Management System, it is recommended to use the Development Instance of the existing Realm (Option B). This approach ensures that any issues found during testing do not affect the live production environment, while still allowing tests to be conducted in an environment that mirrors the production setup as closely as possible. This minimizes the risk of disruptive downtime or customer-facing errors when the integration goes live.

NEW QUESTION # 57

The client provided these business requirements:

* The B2C Commerce storefront will integrate with the client's Order Management System (OMS).

* The storefront will provide real-time order export of successfully pieced orders. The OMS supports both web service export and SFTP batch order export, but the client has expressed concern about the availability of the OMS.

Which two solutions satisfy the requirements and address the OMS reliability concern?

Choose 2 answers

- A. Implement a Live export of orders during checkout via SFTP, marking the processed order as exported when it has completed successfully.
- B. Implement a batch export of orders to SFTP, excluding exported orders. This runs as a scheduled job with a high-frequency run rate and marks processed orders as exported upon success.
- C. Implement a live export of orders during checkout via web service, marking the processed order as exported when the AM returns successfully.
- D. Implement a batch export of orders via web service, excluding exported orders. This runs as a scheduled Job with an hourly run rate and marks processed orders as exported upon success.

Answer: B,D

Explanation:

Given the concerns about the reliability of the OMS, implementing scheduled batch exports ensures that order data is not lost due to potential OMS downtime and allows for reattempting failed exports. Option B uses SFTP for a high-frequency batch export, which can be scheduled to run multiple times a day, ensuring minimal delay in order synchronization while marking orders as exported upon successful transmission.

Option C provides a similar safeguard but via web service, which can be scheduled to run hourly. Both methods enable tracking of export status and can handle temporary downtimes by reattempting the export until successful, aligning with the need for reliability in integration processes.

NEW QUESTION # 58

A B2C Commerce Developer has just finished implementing a new promotion code form on checkout. During review, an Architect notes that the form is not using CSRF validation correctly.

```

<form action="{URLUtils.continueURL()}" method="GET">
  <!-- ... the form input elements ... -->
  <input type="hidden"
    name="{dw.web.CSRFProtection.getTokenName()}"
    value="{dw.web.CSRFProtection.generateToken()}" />
  <input type="submit" value="Apply Promotion Code" />
</form>

formResult = cartForm.handleAction({
  'addPromoCode': function (formgroup) {
    var CSRFProtection = require('dw/web/CSRFProtection');

    var status;
    var result = {
      cart: cart,
      EnableCheckout: true,
      dontRedirect: true
    };
    status = cart.addCoupon(formgroup.couponCode.htmlValue);
    // ... handling code, based on the returned status ... */
    return result;
  }
});

```

Which two options are best practice recommendations for dealing with CSRF validation? Choose 2 answers

- A. Ensure the CSRF protection is validated on form submission.
- B. Automatically renew the CSRF Token if expired.
- C. Only use GET methods over HTTPS.
- D. Only use POST methods over HTTPS.

Answer: A,D

Explanation:

For implementing CSRF (Cross-Site Request Forgery) protection correctly, especially in forms like promotion code submissions during checkout, best practices include:

* Option A (Ensure the CSRF protection is validated on form submission): It is crucial to validate the CSRF token upon the form's submission to ensure that the request originates from a legitimate source and corresponds to the user's intended actions, enhancing security against CSRF attacks.

* Option D (Only use POST methods over HTTPS): Using POST methods for transmitting form data helps mitigate the risk of CSRF attacks as opposed to GET methods which can be manipulated more easily via URL. Ensuring the communication is over HTTPS encrypts the transmission, securing the data from interception or tampering during transit.

These practices safeguard against common security vulnerabilities and ensure that the application adheres to secure coding standards.

NEW QUESTION # 59

a client uses an external marketing tool to manage promotions and coupons for its multiple brands. They currently have only one brand on B2C Commerce and they get Import-ready feeds created by this tool on an SFTP location.

The marketing team completes the data preparation by the end of the work day.

How should the Architect handle this import?

- A. Create a Job and define three steps: one standard step to download files from sftp and two steps that use Execute Script Module to import the promotion and coupons.
- B. Create a Job and define three custom steps: download the files from SFTP, import promotions, import coupons
- C. Create a Job and define three steps: one step uses ExecuteScriptModule to download the files from SFTP, and two standard steps to import the promotion and coupons.
- **D. Create a job and define three steps: one custom step to download the files from SFTP, and two standard steps to import the promotion and coupons.**

Answer: D

Explanation:

To handle the import of promotion and coupon data from an SFTP location, the best approach is to create a job consisting of three steps as described in option C. The first step involves a custom script to download the files from the SFTP server-this is necessary because file retrieval from external servers typically requires specific connectivity and security configurations that are best handled in a custom-coded step. The subsequent two steps would utilize standard Salesforce B2C Commerce job steps to import the downloaded promotion and coupon data into the platform. This method ensures that the data flow is streamlined, from retrieval through to integration into the Commerce platform.

NEW QUESTION # 60

.....

The ExamPrepAway is a trusted and leading platform that is committed to making the entire Salesforce Arch-303 exam preparation process simple, smart, and quick. To achieve this objective ExamPrepAway is offering real, valid, and updated Salesforce Arch-303 Exam Questions. These Salesforce Arch-303 exam dumps are the real Arch-303 exam questions that surely will repeat in the upcoming Arch-303 exam and you can pass the challenging exam.
