- A. separation of d duties.
- B. dual control

Which of the following should the security administrator implement? (Select TWO).

- A. MX record
- B. TLS
- C. SPF
- D. DMARC
- E. S/MIME
- F. DNSSEC

Answer: C,D

Explanation:
Explanation

DMARC (Domain-based Message Authentication, Reporting and Conformance) and SPF (Sender Policy Framework) are two mechanisms that can help detect and prevent email spoofing, which is the creation of email messages with a forged sender address. DMARC allows a domain owner to publish a policy that specifies how receivers should handle messages that fail authentication tests, such as SPF or DKIM (DomainKeys Identified Mail). SPF allows a domain owner to specify which mail servers are authorized to send email on behalf of their domain. By checking the DMARC and SPF records of the sender's domain, a receiver can verify if the email is from a legitimate source or not. Verified References:

- F. Implement file integrity monitoring.

Answer: C,E

Explanation:
* Encrypt all data and files at rest, in transit, and in use: Comprehensive encryption ensures data confidentiality is maintained throughout its lifecycle, meeting the requirement for secure data handling.
* Configure SOAR to monitor and intercept files and data leaving the network: A SOAR system provides automated response capabilities to detect and mitigate data exfiltration attempts dynamically.
This aligns with CASP+ objectives 4.2 and 4.3, which emphasize securing data and using advanced monitoring tools to mitigate risks in sensitive environments.

An organization performed a risk assessment and discovered that less than 50% of its employees have been completing security awareness training. Which of the following should the Chief Information Security Officer highlight as an area of Increased vulnerability in a report to the management team?

- A. Pivoting
- B. Third-party compromise
- C. Social engineering
- D. APT targeting

Answer: C

Explanation:
The Chief Information Security Officer (CISO) should highlight social engineering as an area of increased vulnerability due to the lack of completion of security awareness training by employees. Social engineering attacks exploit human behavior, and employees who are not adequately trained are more likely to fall victim to phishing, pretexting, and other types of social engineering tactics. Increasing awareness and training helps employees recognize and respond appropriately to these threats.
