Are you aware of the importance of the EAEP2201 certification? If your answer is not, you may place yourself at the risk of be eliminated by the labor market. As we know, the EAEP2201 certification is the main reflection of your ability. If you want to maintain your job or get a better job for making a living for your family, it is urgent for you to try your best to get the EAEP2201

Certification. We are glad to help you get the certification with our best EAEP2201 study materials successfully.

Esri Enterprise Administration Professional 2201 Sample Questions (Q28-Q33):

NEW QUESTION # 28

An organization must limit the users who can publish services that reference data in a user-managed database.

At the same time, all users must be able to access and edit the data in that user-managed data store.

How should the database be registered?

- A. As a relational data store in ArcGIS Data Store
- B. As a data store item in the ArcGIS Enterprise portal
- C. As an ArcGIS-managed data store in Server Manager

Answer: B

Explanation:

Registering the database as a data store item in the ArcGIS Enterprise portal allows administrators to control who can publish services referencing the data. By sharing the data store item with specific groups or individuals, administrators can restrict publishing capabilities to authorized users. At the same time, all users can be granted appropriate permissions to access and edit the data directly in the user-managed database, independent of the publishing privileges.

Registering the database as an ArcGIS-managed data store in Server Manager does not provide the same level of control over publishing permissions. Registering it as a relational data store in ArcGIS Data Store is intended for managed data storage and does not apply to user-managed databases.

Reference Source: ArcGIS Enterprise documentation on registering user-managed data stores and controlling access.

NEW QUESTION # 29

A GIS administrator needs to add a member to the ArcGIS Enterprise organization. This member will perform publishing and editing workflows.

Which user type and role should the member be assigned?

- A. The GIS Professional user type and the Data Editor role
- B. The Editor user type and the Publisher role
- C. The Creator user type and the Publisher role

Answer: C

Explanation:

In ArcGIS Enterprise, the Creator user type includes full privileges for content creation, sharing, and administration. When paired with the Publisher role, it grants the user the ability to publish hosted feature layers, map image layers, and other services, as well as perform editing tasks on existing data. This combination is specifically designed for users who require both publishing and editing capabilities.

The Editor user type is limited to editing and cannot publish content. The GIS Professional user type provides access to ArcGIS Pro but, when assigned the Data Editor role, restricts the user from publishing content. Therefore, only the Creator user type with Publisher role supports both publishing and editing workflows.

NEW QUESTION # 30

Multiple users report that a map service is experiencing negative performance. Upon review of ArcGIS Monitor data, the GIS analyst finds the following:

- * The minimum number of instances is 2 and the maximum is 8 for that service.
- * The data is in a publication Enterprise Geodatabase with no system usage in excess of 50%.
- * At the p75 level of requests, the map service time is 10 times longer than the service time at the p25 level.
- * The number of instances in use at the p50 level is 8.
- * The maximum % of physical memory in use is 40%, and the maximum % of virtual memory in use is 44% on the ArcGIS Server.
- * The maximum % CPU utilization observed is 53%.

What is causing the issue?

- A. The network connection between the database server and ArcGIS Server is saturated.
- B. The client is an Android device, and the ArcGIS Server is a Linux virtual machine.
- C. The maximum instance setting is too low for the demand on the underperforming map service.

Answer: A

NEW QUESTION # 31

An organization expects a large influx of users who use the standard analysis tools in the portal Map Viewer.

The organization is concerned with the hosting server's available resources.

Which system resource should be closely monitored?

- A. Disk activity
- B. CPU utilization
- C. Network utilization

Answer: B

Explanation:

When users perform standard analysis tasks in the portal Map Viewer, the hosting server executes geoprocessing operations that are computationally intensive. These operations require significant CPU resources. Monitoring CPU utilization helps ensure that the server can handle the increased load without performance degradation.

While disk activity and network utilization are important, they are less directly impacted by standard analysis tasks compared to CPU usage. Therefore, CPU utilization is the primary resource to monitor in this scenario.

Reference Source: ArcGIS Enterprise documentation on system performance monitoring.

NEW QUESTION # 32

A client requires an ArcGIS Server site that provides the following capabilities

- * Serve several cached image services Each service is published from a single raster and updated once a year with new imagery from which a new cache is generated offline before publishing
- * Serve a dynamic feature class of 1,000 points coming from a PostgreSQL enterprise geodatabase Which licensing role does the client need for this ArcGIS Server site?

- A. Mission Server
- B. GIS Server
- C. Image Server

Answer: C

NEW QUESTION # 33
