

MB-820 Zertifizierungsantworten & MB-820 Deutsch Prüfung

Außerdem sind jetzt einige Teile dieser Fast2test MB-820 Prüfungsfragen kostenlos erhältlich: https://drive.google.com/open?id=1tG7Q7EY_4j1bdGON-aJbR03JqopejHx1

Fast2test ist eine Website, die den IT-Kandidaten, die an der Microsoft MB-820 Zertifizierungsprüfung teilnehmen, Lernhilfe bieten, so dass sie das Microsoft MB-820 Zertifikat erhalten. Die Lernmaterialien von Fast2test werden von den erfahrungreichen Fachleuten nach ihren Erfahrungen und Kenntnissen bearbeitet. Die alle sind von guter Qualität und auch ganz schnell aktualisiert. Unsere Prüfungsfragen und Antworten sind den realen Prüfungsfragen und Antworten sehr ähnlich. Wenn Sie Fast2test wählen, können Sie doch die schwierige Microsoft MB-820 Zertifizierungsprüfung, die für Ihre Karriere von großer Wichtigkeit ist, bestehen.

Microsoft MB-820 Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none"> Integrate Business Central with other applications: Accessing Representational State Transfer (REST) services is discussed in this topic. It also explains implementation of APIs.
Thema 2	<ul style="list-style-type: none"> Develop by using AL: How to Customize the UI experience and Use AL for business central extension is discussed here. It also delves into explaining the essential development standards.
Thema 3	<ul style="list-style-type: none"> Develop by using AL objects: Building and extending tables and reports is discussed in this topic. It also explains Designing and creating an XMLport. Lastly, it discusses how to work with entitlement and permission set objects.
Thema 4	<ul style="list-style-type: none"> Work with development tools: Implementing semi-automated test processes and managing and assessing telemetry are its sub-topics.

MB-820 Schulungsmaterialien & MB-820 Dumps Prüfung & MB-820 Studienguide

Die Fragenkataloge zur die Microsoft MB-820 Zertifizierungsprüfung von Fast2test können den Kandidaten helfen, viel Zeit und Energie zu sparen. Auf diese Weise können Sie beim Bestehen der Microsoft MB-820 Zertifizierungsprüfung bessere Resultate mit wenigerem Einsatz erzielen. Nachdem Sie unsere Prüfungsfragen und Antworten gekauft haben, werden wir Ihnen einjähriger Aktualisierung umsonst anbieten. Wir versprechen Ihnen, dass wir Ihnen eine volle Rückerstattung bedingungslos geben werden, entweder die gekauften Prüfungsmaterialien Qualitätsproblem haben, oder Sie die Microsoft MB-820 Zertifizierungsprüfung nicht bestehen.

Microsoft Dynamics 365 Business Central Developer MB-820 Prüfungsfragen mit Lösungen (Q104-Q109):

104. Frage

You need to create the Install codeunit that is required in the extension used for installing or updating the Housekeeping app. Which data type or declaration should you use? To answer, select the appropriate options in the answer area.
NOTE; Each correct selection is worth one point.

Antwort:

Begründung:

105. Frage

A company is implementing Business Central.

In the per-tenant extension, TableA Header and TableA Line are document tables, and TableB Header and TableB Line are document history tables.

The company requires that the resulting dataset of query objects contain the following records:

- * All records from TableA Header even if no matching record value exists in the linked TableA Line
 - * Records from TableB Header where a match is found in the linked TableB Line field
- You need to configure the linked data item to generate the required dataset.

Which SqlJoinType should you use? To answer, move the appropriate SqlJoinTypes to the correct dataset requirements. You may use each SqlJoinType once, more than once, or not at all. You may need to move the split bar between panes or scroll to view content.

Antwort:

Begründung:

Explanation:

* Include all records from TableA Header even if no matching record value exists in the linked TableA Line: LeftOuterJoin

* Include only matched records from TableB Header: InnerJoin

In SQL and similarly in Business Central when defining table relationships in query objects, the type of join determines how records from one table are combined with records from another table. Here's what each join type means in the context of the company's requirements:

* LeftOuterJoin:

* A LeftOuterJoin includes all records from the 'left' table (TableA Header) and the matched records from the 'right' table (TableA Line). If there is no match, the result is NULL on the side of the 'right' table. This is why it fits the requirement to include all records from TableA Header even if there is no matching record in TableA Line.

* InnerJoin:

* An InnerJoin includes records when there is at least one match in both tables. So, it will only include records from TableB Header where a corresponding match is found in TableB Line. If there is no match, the records from TableB Header will not appear in the result set. This aligns with the requirement to include only matched records from TableB Header.

By using these join types, the company can ensure that their dataset includes the appropriate records from the document tables and document history tables according to their specified requirements.

106. Frage

You create a codeunit that works with a table named Boxes. You plan to filter the records and then modify them.

You get an error that you do not have permission to work with the Boxes table.

You need to assign the Indirect permissions for the Boxes table to the codeunit.

Which four code blocks should you use in sequence to assign the correct permission? To answer, move the appropriate code blocks from the list of code blocks to the answer area and arrange them in the correct order.

Antwort:

Begründung:

Answer Area

TableData

"Boxes" =

Permissions

RIM

1 - TableData

2 - "Boxes" =

3 - Permissions

4 - RIM

107. Frage

A company owns and operates hotels, restaurants, and stores.

When the staff orders materials from the purchasing department, the requests are not directed to the correct approvers.

The staff requires a new field named Approver from which they can select the appropriate approver. The field must include the

following options:

- * Hotel manager
- * Restaurant manager
- * Store manager
- * Purchasing manager

You need to create the Approver field in the Item table by using an AL extension.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Actions

- Create an enum object named Approver and include all options.
- Create a table extension object for an Item table with an Approver field of enum type named Approver in the layout section.
- Create a page extension object that extends the Item Card object. Add the field to the layout section.
- Create a table extension object for an Item table with an Approver field of enum type named Approver in the field section.
- Create a page extension object that extends the Item Card object. Add the field to the fields section.
- Add the options to the existing Base Application Approver table.

Build and extend tables

Antwort:

Begründung:

Actions

- Create an enum object named Approver and include all options.
- Create a table extension object for an Item table with an Approver field of enum type named Approver in the layout section.
- Create a page extension object that extends the Item Card object. Add the field to the layout section.
- Create a table extension object for an Item table with an Approver field of enum type named Approver in the field section.
- Create a page extension object that extends the Item Card object. Add the field to the fields section.
- Add the options to the existing Base Application Approver table.

Build and extend tables

Explanation:

Create an enum object named Approver and include all options.

* Reasoning: First, you must define the set of options (Hotel manager, Restaurant manager, etc.). In modern AL development, Enums are the standard way to create option sets because they are extensible.

Create a table extension object for an Item table with an Approver field of enum type named Approver in the field section.

* Reasoning: Next, you need to add the actual data field to the database. Since the "Item" table is a standard base table, you use a table extension. Tables use a fields section to define data columns. You reference the Enum created in step 1 here.

Create a page extension object that extends the Item Card object. Add the field to the layout section.

* Reasoning: Finally, to allow users to see and edit this new field on the screen, you must extend the "Item Card" page. Pages use a layout section to determine where controls appear.

108. Frage

A company uses Business Central. The company is generating a detailed custom report.

A user observes that the generated report dataset contains more Delivery Line records than expected for one specific Delivery Header.

You need to generate a report that contains the accurate number of records.

```
01 dataitem("Delivery Header"; "Delivery Header")
02 {
03     column(No.; "No.") { }
04     column(Customer_Name; "Customer Name") { }
05     dataitem("Delivery Line"; "Delivery Line")
06     {
07         column(Document_No.; "Document No.") { }
08         column(Delivery_Address; "Delivery Address") { }
09     }
10 }
```

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

Property configuration statements

Statement	Yes	No
Configure the DataItemTableView property of the Delivery Header data item.	<input type="radio"/>	<input type="radio"/>
Configure the RequestFilterFields property of both data items.	<input type="radio"/>	<input type="radio"/>
Configure the DataItemLink property of the Delivery Line table.	<input type="radio"/>	<input type="radio"/>

Antwort:

Begründung:

Statement	Yes	No
Configure the DataItemTableView property of the Delivery Header data item.	<input checked="" type="radio"/>	<input type="radio"/>
Configure the RequestFilterFields property of both data items.	<input checked="" type="radio"/>	<input type="radio"/>
Configure the DataItemLink property of the Delivery Line table.	<input checked="" type="radio"/>	<input type="radio"/>

Explanation:

The report generated by the company contains more Delivery Line records than expected for one specific Delivery Header. To address this, certain properties within the report's data items need to be configured correctly.

Property Configuration Statements:

- * Configure the DataItemTableView property of the Delivery Header data item This property defines the view (filtering and sorting) for a data item in a report. If the DataItemTableView is not configured properly, it might pull in more records than expected.
answer: Yes. By configuring this property, you can control which Delivery Header records are retrieved, preventing excess records.
- * Configure the RequestFilterFields property of both data items This property allows the user to set fields to filter on the request page of the report. Configuring the filter fields can help users refine the records being retrieved for both Delivery Header and Delivery Line.
answer: Yes. By setting appropriate filters on both data items, users can control which records to include, which is critical in narrowing down the correct data.
- * Configure the DataItemLink property of the Delivery Line table This property links two data items based on common fields. If not configured properly, more Delivery Line records than expected might be retrieved because the link between Delivery Header and Delivery Line might not be accurate.
answer: Yes. Configuring the DataItemLink ensures that only the Delivery Line records associated with the specific Delivery Header are retrieved, avoiding an excess of records.

Conclusion:

- * DataItemTableView property of Delivery Header data item # Yes
- * RequestFilterFields property of both data items # Yes
- * DataItemLink property of Delivery Line table # Yes

Each configuration is necessary for generating the correct number of records in the report dataset.

109. Frage
