

500-710 Reliable Exam Vce - 500-710 Online Test

BONUS!!! Download part of Prep4sures 500-710 dumps for free: https://drive.google.com/open?id=1ny3Th3KJQ_DmlNtZslar2jhgpVdxDeIe

By practicing under the real exam scenario of this Cisco 500-710 web-based practice test, you can cope with exam anxiety and appear in the final test with maximum confidence. You can change the time limit and number of questions of this Cisco 500-710 web-based practice test. This customization feature of our Cisco Video Infrastructure Implementation (500-710) web-based practice exam aids in practicing as per your requirements. You can assess and improve your knowledge with our Cisco 500-710 practice exam.

Cisco 500-710 Exam Syllabus Topics:

Section	Objectives
	- Diagnostics and monitoring
Troubleshooting and Maintenance	• 1. Call failure troubleshooting • 2. Log analysis and system health checks
	- Cisco Meeting Server implementation
Cisco Meeting and Collaboration Services	• 1. Conference bridge configuration • 2. Media processing and call control
	- Cisco Expressway deployment and configuration
Cisco Expressway and Edge Infrastructure	• 1. Mobile and Remote Access (MRA) • 2. Basic Expressway setup • 3. Firewall traversal and secure connectivity
	- SIP/H.323 interoperability
Video Network Integration	• 1. Dial plan configuration • 2. Protocol translation and routing

500-710 Online Test, Latest 500-710 Test Camp

Prep4sures offers a complete Cisco Video Infrastructure Implementation (500-710) practice questions in PDF format. This Cisco 500-710 test questions pdf file format is simple to use and can be accessed from any device, including a desktop, tablet, laptop,

Mac, or smartphone. No matter where you are, you can learn on the go. The PDF version of the Cisco Video Infrastructure Implementation (500-710) exam questions is also readily printable, allowing you to keep tangible copies of the Cisco Video Infrastructure Implementation (500-710) questions with you at all times.

Cisco Video Infrastructure Implementation Sample Questions (Q71-Q76):

NEW QUESTION # 71

Which three hybrid connectors allow Cisco Spark to be integrated with an on-premises solution? (Choose three.)

- A. Directory Service
- B. Directory Connect
- C. Call Connector
- D. Calendar Connector
- E. Calendar Aware
- F. Calendar Service

Answer: A,C,F

NEW QUESTION # 72

Which type of API is used to configure settings on the Cisco Meeting Server?

- A. REST
- B. JSON-RPC
- C. XMP-RPC
- D. SOAP
- E. XML-RPC

Answer: A

Explanation:

The Cisco Meeting Server (CMS) uses a RESTful API to configure settings on the server. The RESTful API allows the user to perform CRUD (Create, Read, Update, Delete) operations on the CMS resources using HTTP methods such as GET, POST, PUT, and DELETE. The RESTful API also supports JSON and XML formats for the request and response bodies. The CMS web interface and the Cisco Meeting Management (CMM) application use the RESTful API to communicate with the CMS. The other options are not valid types of API for the CMS. NEW QUESTION # 73

Which two elements of authentication credentials are stored in the local database of the Expressway? (Choose two.)

- A. password
- B. user authority
- C. crypto hash key
- D. username
- E. CA authority

Answer: A,D

Explanation:

According to the Cisco documentation¹, the Expressway stores the username and password of the local database users in its local database. These users can be used for authentication and authorization purposes when accessing the Expressway web interface or API. The other elements, such as user authority, CA authority, and crypto hash key, are not stored in the local database of the Expressway, but are either derived from other sources or generated dynamically. References: 1: Cisco Expressway Basic Configuration Deployment Guide, Chapter 3: Configuring Local Database Users, https://www.cisco.com/c/dam/en/us/td/docs/voice_ip_comm/expressway/config_guide/X8-11/Cisco-Expressway-Basic-Configuration-Deployment-Guide-X8-11.pdf

NEW QUESTION # 74

While scheduling a CMS conference on TMS, an engineer notices that it will not add a WebEx meeting as a participant. Which option is the possible issue?

- A. WebEx requires a domain be added to the CMS.
- **B. The WebEx server address must be properly configured in TMS and the CMS.**
- C. WebEx can be added to conferences only using Telepresence Server/Conductor.
- D. A SIP trunk is required between the WebEx server and CMS.

Answer: B

Explanation:

= To schedule a CMS conference on TMS with WebEx as a participant, the engineer needs to ensure that the WebEx server address is correctly configured in both TMS and CMS. This is because TMS uses the WebEx server address to create an externally hosted conference with a WebEx SIP URI, and CMS uses the WebEx server address to dial out to the WebEx meeting. The WebEx server address can be configured in TMS under Administrative Tools > Configuration > Network Settings > WebEx Settings, and in CMS under Configuration > WebEx. The WebEx server address should match the WebEx site URL that is used to join the WebEx meeting¹². References := 12

NEW QUESTION # 75

Cisco Meeting Server uses four API commands to interact with the server. Which API command is used to modify a configuration setting on the Cisco Meeting Server?

- A. POST
- B. DELETE
- **C. PUT**
- D. GET

Answer: C

Explanation:

= The Cisco Meeting Server uses a RESTful API to interact with the server. The API commands are sent via HTTP requests to the web admin service, which processes them and returns the response. The four basic API commands are GET, POST, PUT, and DELETE. Each command has a different function and syntax, as explained below¹²:

* GET: Retrieves existing information from the server. The syntax is GET /api/v1/<object>

/<id> where <object> is the type of object to retrieve, such as call, participant, space, etc., and <id> is the unique identifier of the object, such as a UUID or a name. For example, GET /api/v1/calls

/12345678-1234-1234-1234-123456789012 will return the information about the call with the specified UUID.

* POST: Creates new information on the server. The syntax is POST /api/v1/<object> where <object> is the type of object to create, such as call, participant, space, etc. The request body contains the attributes and values of the object to create, in JSON format. For example, POST /api/v1/spaces with the request body {"name": "Test Space", "uri": "test@domain.com"} will create a new space with the specified name and URI.

* PUT: Modifies existing information on the server. The syntax is PUT /api/v1/<object>

/<id> where <object> is the type of object to modify, such as call, participant, space, etc., and <id> is the unique identifier of the object, such as a UUID or a name. The request body contains the attributes and values of the object to modify, in JSON format.

For example, PUT /api/v1/spaces/12345678-1234-

1234-1234-123456789012 with the request body {"name": "New Name"} will change the name of the space with the specified UUID to "New Name".

* DELETE: Deletes existing information from the server. The syntax is DELETE /api/v1/<object>

/<id> where <object> is the type of object to delete, such as call, participant, space, etc., and <id> is the unique identifier of the object, such as a UUID or a name. For example, DELETE /api/v1/spaces

/12345678-1234-1234-1234-123456789012 will delete the space with the specified UUID.

In this question, the API command that is used to modify a configuration setting on the Cisco Meeting Server is PUT, as it allows changing the attributes and values of an existing object on the server.
