Arch-303 Real Brain Dumps & Arch-303 Cost Effective Dumps

If you are preparing for an exam, it may spend lots of time, but don't worry, if you are preparing for the Arch-303 exam, the product of our company will help you save your time. The product of our company will list the major key points of the Arch-303 exam, and you can grasp the knowledge points as quickly as possible, therefore the time is saving. Besides, the product for Arch-303 Exam also provide specific training materials for the exam. And the PDF version is convenient to read, and support printing, while the software version stimulate the real environment of the Arch-303 exam. The APP online version is slao available of the product, you can learn at any time and at any place. Choosing our product, it will help you.

Salesforce Certified B2C Commerce Architect Sample Questions (Q17-Q22):

NEW QUESTION # 17

A business wants to migrate its customerservice provider from provider A to provider B. Provider e offers a LINK cartridge to integrate with its commerce solution.

Which three artifacts need to be created by the Architect? Choose 3 answers

- A. Document the data objects, the interface, and data synchronization frequency between the systems.
- B. Document the customizations required on top of the LINK cartridge based on current commerce implementation and business needs.
- C. Document how the customer online journey flows from landing on the page to placing of the order
- D. Document the design of implementing a new B2C Commerce cartridge following the industry standard best practices
- E. Document the data mapping between commerce and customer service provider.

Answer: A,B,D

Explanation:

When integrating a new LINK cartridge for a customer service provider, the following documents are essential:

* Option A (Document the design of implementing a new B2C Commerce cartridge following the industry standard best practices):

This ensures that the cartridge is implemented in a manner that is consistent with established best practices, enhancing maintainability and compatibility.

* Option B (Document the data objects, the interface, and data synchronization frequency between the systems): It's crucial to define how data will flow between the new customer service provider and the commerce system, including the frequency of synchronization to ensure data integrity and timeliness.

* Option D (Document the customizations required on top of the LINK cartridge based on current commerce implementation and business needs): Customizing the cartridge to fit the specific needs and existing setup of the commerce system ensures that the integration adds the intended value without disrupting existing operations.

These artifacts will guide the structured integration and customization of the LINK cartridge, ensuring it meets the business's operational and strategic needs.

NEW QUESTION # 18

The Client identifies that a segment of customers need to see some products on the site that other customers should not be able to access. All products are maintained within one catalog but in separate categories. A custom attribute will be used on the Profile system object to identify customers that belong to this special segment. A customer group will be made that is qualified for by this Profile custom attribute. The storefront will be customized to include navigation to relevant categories for this customer group. Unfortunately during technical review the Client points out that the business teams have raised a concern with maintenance and want to use a shared navigation within the catalog and not use separate categories.

Which item should the Architect suggest to efficiently fulfil this new requirement while maintaining scalability?

- A. Customize the Storefront to modify the search result that if the user is in the customer group then the result includes those products appropriately.
- B. Customize the Storefront to use a hidden search refinement and modify the customer group to be qualified for by a new product custom attribute
- C. Customize the Storefront to use separate storefront catalogs with the same navigation that If the customer Is In the customer group gets assign products appropriately.
- D. Customize the Storefront Co use a hidden search refinement that if the user Is In the customer group then the result Includes those products with a new custom attribute.

Answer: A

Explanation:

The optimal solution for this requirement is to modify the search results dynamically based on the user's customer group membership.

This approach:

* Ensures that all users can navigate the same catalog and categories without seeing separate categories for special segments.

* Dynamically includes or excludes products from search results based on the user's membership in the special segment, effectively using existing catalog structures while personalizing product visibility.

* Maintains scalability by leveraging existing catalog and category infrastructure without needing additional custom attributes for navigation purposes.

This method aligns with best practices for creating personalized customer experiences in B2C Commerce without complicating catalog management.

NEW QUESTION # 19

The Client plans to deploy a new payment provider and Order Management System on its existing B2C Commerce website. They have asked an Architect to advise which environment it should use to conduct load testing of its new integrations.

Which environment should be used as the ideal environment for this kind of load test?

- **A. The Development Instance of the existing Realm.**
- B. The Development Instance of a rental Realm.
- C. The Production Instance of a rental Realm.
- D. The Production instance of the existing Realm.

Answer: A

Explanation:

For conducting load testing of new integrations with a payment provider and Order Management System, it is recommended to use the Development Instance of the existing Realm (Option B). This approach ensures that any issues found during testing do not affect the live production environment, while still allowing tests to be conducted in an environment that mirrors the production setup as closely as possible. This minimizes the risk of disruptive downtime or customer-facing errors when the integration goes live.

NEW QUESTION # 20

During implementation, the team found that there is a notification controller exposed for an external service that marks the order as paid when notification is received. The notification URL is sent to the service together with the payment request and contains only the URL with orderID as the parameter.

What should the Architect recommend to the team in order to prevent the unauthorized usage of the controller to mark the orders as paid?

- A. Add a customer number in the callback URL and match the customer number against the one stored on the order.
- **B. Add an order token in the callback URL and match the token against the one stored on the order.**
- C. Add HTTPS restriction to the controller start node.
- D. Add a session attribute and validate it on the callback.

Answer: B

Explanation:

To enhance the security of the notification controller exposed for marking orders as paid, the recommended approach is to add an order-specific token to the callback URL (Answer C). This token should be verified against a stored value on the order to ensure the authenticity and integrity of the payment notification. This method prevents unauthorized use of the controller, as only callbacks containing the correct, order-specific token would be allowed to mark orders as paid. This strategy is essential in maintaining secure and reliable transaction processes within Salesforce B2C Commerce.

NEW QUESTION # 21

During code review, the Architect found that there is a service call on every visit of the product detail woe (PDP).

What best practices should the Architect ensure are followed for the service configuration?

Choose 2 answers

- A. Service logging is disabled.
- B. Circuit breaker is enabled.
- **C. Service mock up call is configured.**
- D. Service timeout is set.

Answer: C

Explanation:

For logging practices in a complex LINK cartridge integration, the recommendation is:

* Get logger for cartridge-specific category (C): This practice allows for more precise and relevant logging by focusing on the specific cartridge, making troubleshooting more efficient.

* Report debug level message for the back-end asynchronous communication: This ensures that all detailed interactions are logged, providing valuable data for diagnosing issues.

* Report all errors at error level message: This categorizes all critical issues under error logs, which is essential for quick identification and resolution of problems affecting the system's operations.

This structured logging strategy enhances the ability to monitor and troubleshoot the system effectively, especially in complex integrations where multiple components interact asynchronously.
