Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q10-Q15):

NEW QUESTION # 10
A MuleSoft developer at AnyAirlines wants to retrieve customer data from an external system.
Before designing a new integration, what should they use to determine if the integration exists and can be reused?

- A. Design Center
- B. Anypoint Exchange
- C. MuleSoft Composer
- D. Anypoint Studio

Answer: B

Explanation:
To determine if an integration exists and can be reused, the MuleSoft developer should use Anypoint Exchange:
Anypoint Exchange:

Anypoint Exchange is a repository where developers can publish, share, and discover reusable assets such as APIs, connectors, templates, and examples. It serves as a centralized location for all reusable components within the MuleSoft ecosystem.
By searching Anypoint Exchange, the developer can find existing integrations or assets that might fulfill the requirements for retrieving customer data, avoiding the need to design and develop a new integration from scratch.

Anypoint Exchange Documentation

NEW QUESTION # 11

Northern Trail Outfitters develops an API to look up manufacturer rebates. This API will be consumed internally by the website's backend and the RPA boots used by its customer service representatives.
How should this API be shared within the organization?

- A. The API's RAML specification should be stored in a SharePoint repository.
- B. The API asset should be published to the private Exchange portal.
- C. Example assets should be published to the private Exchange.
- D. The API asset should be published to the public Exchange portal.

Answer: B

Explanation:
To effectively share an API internally within an organization, publishing the API asset to the private Exchange portal is the best approach:
Private Exchange Portal:
The private Exchange portal within MuleSoft Anypoint Platform is designed for sharing APIs, connectors, templates, and other assets within an organization. It provides a central repository that is accessible to all relevant teams and departments.
Access Control and Security:
By using the private Exchange, you can control access to the API, ensuring that only authorized internal users, such as the website's backend team and customer service representatives using RPA bots, can consume it.
Ease of Use:
Publishing to the private Exchange makes it easy for internal teams to discover, access, and reuse the API, promoting consistency and reducing duplication of effort.

NEW QUESTION # 12

Which Connected App scope should be used to connect RPA Manager with an Anypoint Platform account?

- A. Application Creator
- B. API Catalog Contributor
- C. RPA Integrator
- D. Exchange Administrator

Answer: C

Explanation:
To connect RPA Manager with an Anypoint Platform account, the appropriate Connected App scope is RPA Integrator:
RPA Integrator Scope:
The RPA Integrator scope is designed to provide the necessary permissions for integrating RPA Manager with Anypoint Platform. This scope allows the connected app to interact with the RPA Manager and manage RPA processes.
Connected App Configuration:
When setting up a connected app in Anypoint Platform, select the RPA Integrator scope to ensure that the integration can access and manage the RPA processes as required.

NEW QUESTION # 13

Which MuleSoft deployment strategy consists of the control plane and runtime plan hosted by the client?

- A. Hybrid
- B. Runtime Fabric
- C. CloudHub
- D. IPrivate Cloud Edition

Answer: A

Explanation:
A hybrid deployment strategy in MuleSoft involves hosting the control plane (Anypoint Platform management and design tools) in the cloud, while the runtime plane (where Mule applications run) is hosted by the client, either on-premises or in their own private cloud:
Hybrid Deployment:
The control plane is managed by MuleSoft and provides centralized management, monitoring, and deployment capabilities.
The runtime plane is hosted by the client, providing flexibility and control over where and how the Mule applications are executed, whether on-premises or in a private cloud environment.
Benefits:
This approach combines the advantages of cloud-based management with the control and customization available in on-premises or private cloud deployments, making it suitable for organizations with specific hosting and compliance requirements.

MuleSoft Hybrid Deployment Documentation

NEW QUESTION # 14
AnyAirlines needs to select a tool for developing an integration between Salesforce and an ERP system in the cloud. The requirements state that the systems must communicate bidirectionally and as close to real time as possible. The ERP system can be accessed via a SOAP-based web service.
Which tool meets the requirements of this integration?

- A. Anypoint Studio
- B. MuleSoft RPA
- C. MuleSoft Composer
- D. Orchestrator

Answer: A

Explanation:
Anypoint Studio is the most suitable tool for developing an integration between Salesforce and an ERP system in the cloud, especially when bidirectional communication in near real-time is required. Here's why:
SOAP-Based Web Services Support:
Anypoint Studio supports SOAP-based web services, which is essential since the ERP system can be accessed via SOAP.
Bidirectional Communication:
Anypoint Studio allows for complex integrations that require bidirectional communication. You can set up flows that handle both inbound and outbound data seamlessly.
Real-Time Integration:
With Anypoint Studio, you can design integrations that process data in near real-time, ensuring timely updates between Salesforce and the ERP system.
Advanced Integration Capabilities:
Anypoint Studio offers advanced capabilities for data transformation, error handling, and connecting various systems, making it ideal for complex integration scenarios.
