NCLEX National Council Licensure Examination(NCLEX-RN) Sample Questions (Q333-Q338):

NEW QUESTION # 333

The nurse needs to be aware that the most common early complication of a myocardial infarction is:

- A. Cardiac dysrhythmia
- B. Cardiac hypertrophy
- C. Anaphylactic shock
- D. Diabetes mellitus

Answer: A

Explanation:

Explanation

(A) Diabetes mellitus is not a common complication of myocardial infarction. (B) Anaphylactic shock is an allergic reaction. (C) Cardiac hypertrophy is a late potential complication. It is a common complication of congestive heart failure. (D) Myocardial infarction causes tissue damage, which may interrupt electrical impulses. Myocardial irritability results from lack of oxygenated tissue.

NEW QUESTION # 334

A successful executive left her job and became a housewife after her marriage to a plastic surgeon. She started doing volunteer work for a charity organization. She developed pain in her legs that advanced to the point of paralysis. Her physicians can find no organic basis for the paralysis. The client's behavior can be described as:

- A. Agoraphobia
- B. Malingering
- **C. Conversion reaction**
- D. Housework phobia

Answer: C

Explanation:

Section: Questions Set D

Explanation:

(A) A typical phobia does not result in physical symptoms (i.e., paralysis). (B) Malingering is pretending to be ill.

This person has a true paralysis. (C) A conversion reaction is a physical expression of an emotional conflict. It has no organic basis.

(D) Agoraphobia is fear of public places.

NEW QUESTION # 335

A female client at 10 weeks' gestation complains to her physician of slight vaginal bleeding and mild cramps. On examination, her physician determines that her cervix is closed. The client is exhibiting signs of:

- A. A missed abortion
- **B. A threatened abortion**
- C. An incomplete abortion
- D. An inevitable abortion

Answer: B

Explanation:

Explanation/Reference:

Explanation:

(A) An inevitable abortion includes the signs of cervical dilation and effacement as well as pain and bleeding. (B) A threatened abortion is a condition in which intrauterine bleeding occurs early in pregnancy, the cervix remains undilated, and the uterine contents are not necessarily expelled. (C) An incomplete abortion occurs when some portions of the products of conception are expelled from the uterus. (D) A missed abortion occurs when the embryo dies in utero and is retained in the uterus.

NEW QUESTION # 336

The nurse is caring for a 6-week-old girl with meningitis. To help her develop a sense of trust, the nurse should:

- A. Give her good perineal care after each diaper change
- B. Give her a small soft blanket to hold
- **C. Pick her up when she cries**
- D. Leave the door open to her room

Answer: C

Explanation:

Explanation

(A) A soft blanket may be comforting, but it is not directed toward developing a sense of trust. (B) Good perineal care is important, but it is not directed toward developing a sense of trust. (C) An infant with meningitis needs frequent attention, but leaving the door

open does not foster trust. (D) Consistently picking her up when she cries will help the child feel trust in her caregivers.

NEW QUESTION # 337

A 44-year-old female client is receiving external radiation to her scapula for metastasis of breast cancer. Teaching related to skin care for the client would include which of the following?

- A. Teach her to completely clean the skin to remove all ointments and markings after each treatment.
- B. **Encourage her to avoid direct sunlight on the area being treated.**
- C. Encourage her to wear a tight-fitting vest to support her scapula.
- D. Teach her to cover broken skin in the treated area with a medicated ointment.

Answer: B

Explanation:

(A) The skin in a treatment area should be rinsed with water and patted dry. Markings should be left intact, and the skin should not be scrubbed. (B) Clients should avoid putting any creams or lotions on the treated area. This could interfere with treatment. (C) Radiation therapy clients should wear loose-fitting clothes and avoid tight, irritating fabrics. (D) The area of skin being treated is sensitive to sunlight, and the client should take care to prevent sun damage by avoiding direct sunlight and covering the area when she is in the sun.
