## Cisco Implementing Cisco Enterprise Advanced Routing and Services Sample Questions (Q311-Q316):

### NEW QUESTION # 311

Refer to the exhibit. A network administrator configured NTP on a Cisco router to get synchronized time for system and logs from a unified time source. The configuration did not work as desired. Which service must be enabled to resolve the issue?

- A. Enter the service timestamps log datetime console global command.
- **B. Enter the service timestamps log datetime localtime global command.**
- C. Enter the service timestamps log datetime synchronize global command.
- D. Enter the service timestamps log datetime clock-period global command.

**Answer: B**

Explanation:

Explanation

If a router is configured to get the time from a Network Time Protocol (NTP) server, the times in the router's log entries may be different from the time on the system clock if the [localtime] option is not in the service timestamps log command. To solve this issue, add the [localtime] option to the service timestamps log command. The times should now be synchronized between the system clock and the log message timestamps.

### NEW QUESTION # 312

A network administrator must optimize the segment size of the TCP packet on the DMVPN IPsec protected tunnel interface, which carries application traffic from the head office to a designated branch. The TCP segment size must not overwhelm the MTU of the outbound link. Which configuration must be applied to the router to improve the application performance?

- A. Option A
- B. Option B
- **C. Option C**
- D. Option D

**Answer: C**

### NEW QUESTION # 313

Refer to the exhibit.

Which two actions restrict access to router R1 by SSH? (Choose two.)

- A. Remove class-map ANY from service-policy CoPP
- **B. Configure transport output ssh on line vty and remove sequence 20 from access list 100.**
- C. Configure transport output ssh on line vty and remove sequence 10 from access list 199.
- D. Remove sequence 10 from access list 100 and add sequence 20 deny tcp any any eq telnet to access list 199
- **E. Configure transport input ssh on line vty and remove sequence 30 from access list 100.**

**Answer: B,E**

Explanation:

To only allow SSH to R1, we have to: + Deny Telnet in ACL 100 because the action of class-map: PERMIT is "permit" + Permit Telnet in ACL 199 because the action of class-map: ANY is "drop" But:

+ In ACL 100 there is a permit statement for Telnet traffic "20 permit tcp any any eq telnet (5 matches)" which is not correct so we must remove this statement. + In ACL 199 there is an ACL statement "10 deny tcp any any eq telnet any (50 matches)". This statement is aimed for Telnet traffic leaving R1 which is not correct so we must remove this statement.

Note: + The command "transport output telnet ssh" allows telnet and SSH from this device (to other devices). + Telnet is TCP port 23. + When using Telnet on source port, it affects Telnet traffic leaving from R1.

### NEW QUESTION # 314

Refer to the exhibit.

Which action resolves the adjacency issue?

- A. Match the hello interval timers.
- B. Configure the same EIGRP process IDs.
- C. Match the authentication keys.
- **D. Configure the same autonomous system numbers.**

**Answer: D**
