Our ActualVCE is a helpful website with a long history to provide Web-Development-Applications Exam Certification training information for IT certification candidates. Through years of efforts, the passing rate of ActualVCE's Web-Development-Applications certification exam has reached to 100%.

WGU Web Development Applications Sample Questions (Q87-Q92):

NEW QUESTION # 87

Given the following code:

What does the #item token do?

- A. It defines a JavaScript function with one parameter.
- **B. It locates an HTML5 element by its ID**
- C. It specifies a CSS3 property.
- D. It creates an XML element.

Answer: B

Explanation:

The #item token in CSS is used to select an HTML element by its ID attribute.

* CSS ID Selector:

* Syntax: The ID selector is prefixed with a hash symbol (#) followed by the ID value of the HTML element.

* Example: If the HTML element has an attribute id="item", it can be selected and styled in CSS as:

```
width: 300px;
}
```

* Functionality:

* Selects an Element: The ID selector targets the specific HTML element with the matching id attribute.

* Specificity: ID selectors have high specificity, meaning they will override styles from type selectors and

NEW QUESTION # 88

Given the following JavaScript code:

What happens when this code is executed?

- **A. The object with the demo is changed to 6.**
- B. The object with the id innerHTML is changed to 6.
- C. The object with the id innerHTML is changed to x.
- D. The object with the id demo is changed to x.

Answer: A

Explanation:

The provided JavaScript code sets a variable x to 6 and then assigns this value to the innerHTML of the HTML element with the id demo.

```
var x;
```

```
x = 6;
```

```
document.getElementById("demo").innerHTML = x;
```

Explanation:

* Variable Declaration: var x; declares the variable x.

* Variable Assignment: x = 6; assigns the value 6 to the variable x.

* DOM Manipulation: document.getElementById("demo").innerHTML = x; finds the element with id demo and sets its innerHTML to the value of x, which is 6.

Outcome:

* The content of the HTML element with the id demo will be changed to 6.

NEW QUESTION # 89

Given the following HTML code:

Which line of code should replace the first line to ensure that users can pause and restart the video?

- A. ☐
- B. ☐
- C. ☒
- D. ☐

Answer: C

Explanation:

To ensure that users can pause and restart the video, the controls attribute needs to be added to the <video> tag. This attribute provides the user with controls to play, pause, and adjust the volume of the video. The correct line of code that should replace the first line in the provided HTML to achieve this functionality is:

```
<video width="360" height="270" controls>
```

Here's the comprehensive explanation:

* controls Attribute: The controls attribute is a boolean attribute. When present, it specifies that video controls should be displayed, allowing the user to control video playback, including pausing, playing, and seeking.

* HTML Structure:

* Original Line:

```
<video width="360" height="270">
```

* Revised Line:

```
<video width="360" height="270" controls>
```

* Usage Example:

```
<video width="360" height="270" controls>
```

```
<source src="video.mp4" type="video/mp4">
```

Your browser does not support the HTML5 video element.

```
</video>
```

In this example, adding the controls attribute provides the user with play, pause, and volume controls.

NEW QUESTION # 90

Given the following HTML statement:

And the following style:

Which line of the changes the background color of the <div> tag when the width is between 600 pixels and 900 pixels or more than 1, 100 pixels?

- A. ☐
- B. ☒
- C. ☐
- D. ☐

Answer: B

Explanation:

The given HTML and CSS statements define a class named "example" and use media queries to change the background color of the <div> element based on the screen width. The correct CSS media query to change the background color of the <div> tag when the width is between 600 pixels and 900 pixels or more than 1100 pixels is: Copy code

```
@media screen and (max-width: 900px) and (min-width: 600px), (min-width: 1100px) { div.example { background: yellow; } }
```

* Understanding Media Queries:

* @media screen: Applies the styles only for screens.

* (max-width: 900px) and (min-width: 600px): Targets screen widths between 600 and 900 pixels.

* ,(comma): Acts as an "or" operator in media queries.

* (min-width: 1100px): Targets screen widths greater than or equal to 1100 pixels.

* Option C Explanation:

* This option uses the correct media query syntax to apply the background color change when the screen width is between 600 and

900 pixels or when it is 1100 pixels or more.

W3C CSS Media Queries Level 4

The correct CSS media query based on the provided options is:

```
@media screen and (max-width: 900px) and (min-width: 600px), (min-width: 1100px) { div.example { background: yellow; } }
```

NEW QUESTION # 91

What represents the value of the pattern attribute of an input element in an HTML

- A. A regular expression
- B. A JavaScript function
- C. A SQL statement
- D. A style sheet

Answer: A

Explanation:

The value of the pattern attribute in an input element is a regular expression. This regular expression is used to define what constitutes a valid value for the input.

* Regular Expressions: Regular expressions (regex) are sequences of characters that define search patterns. They are commonly used for string matching and validation.

* Usage Example:

<input type="text" pattern="d{5}" placeholder="Enter a 5-digit number"> Here, the pattern attribute value is a regular expression that validates a five-digit number.
