SAP Certified Associate - Positioning SAP Business AI Solutions as part of SAP Business Suite Sample Questions (Q33-Q38):

NEW QUESTION # 33
What are the main domain clusters of SAP's guiding principles for ethical AI? Note: There are 3 correct answers to this question.

- A. AI System engineering
- B. Organizational practice
- C. Executive Sponsorship

- D. AI Ethics Steering Committee

Answer: A,B,D

Explanation:
SAP's guiding principles for ethical AI are organized into key domain clusters, including the AI Ethics Steering Committee, Organizational practice, and AI System engineering, as outlined in the SAP Responsible AI Framework. The AI Ethics Steering Committee oversees governance, ensuring AI development aligns with ethical standards. Organizational practice involves embedding ethical considerations into business processes, training, and culture to promote responsible AI use. AI System engineering focuses on designing AI systems with transparency, fairness, and accountability, incorporating technical safeguards to mitigate bias and ensure reliability. Executive Sponsorship, while important for leadership support, is not a defined domain cluster, and AI System definition is not explicitly listed in SAP's framework. These clusters ensure SAP's AI solutions are trustworthy and aligned with global ethical standards.

NEW QUESTION # 34
Match the key personas of an organization to the impact of SAP Business AI on their organization.

- A. Chief Procurement Officer (CPO) → Improve sourcing, forecasting disruptions, and managing suppliers
- B. Chief Information Officer / CTO (CIO/CTO) → Integrate seamlessly with current technological infrastructure in a secure way
- C. Chief Human Resources Officer (CHRO) → Enhance hiring, developing employees, and streamlining HR agility
- D. Chief Financial Officer (CFO) → Improve financial efficiency, forecasting, and managing risk

Answer: A,B,C,D

Explanation:
SAP Business AI delivers tailored impacts for key organizational personas, as outlined in SAP documentation. For the Chief Human Resources Officer (CHRO), AI enhances hiring, employee development, and HR agility through predictive analytics and automation in SAP SuccessFactors. The Chief Procurement Officer (CPO) benefits from improved sourcing, disruption forecasting, and supplier management via AI-driven insights in SAP Ariba. The Chief Information Officer/CTO (CIO/CTO) leverages seamless integration with existing infrastructure, ensuring secure and scalable AI adoption across SAP systems. The Chief Financial Officer (CFO) gains improved financial efficiency, forecasting, and risk management through AI-enhanced analytics in SAP S/4HANA. These persona-specific benefits demonstrate SAP Business AI's ability to drive value across diverse roles.

NEW QUESTION # 35
Which protocol enables autonomous AI agents to discover each other, delegate tasks, and collaborate across platforms?

- A. Agent2Agent (A2A)
- B. Model Context Protocol (MCP)
- C. Agent Hub
- D. Agent-to-Orchestrator (A2O)

Answer: A

Explanation:
The Agent2Agent (A2A) protocol enables autonomous AI agents to discover each other, delegate tasks, and collaborate across platforms, as detailed in SAP Business AI documentation. This protocol facilitates direct communication and coordination between AI agents, allowing them to share tasks and data seamlessly within and across SAP ecosystems. This ensures efficient, decentralized collaboration for complex workflows. The Agent-to-Orchestrator (A2O) protocol focuses on orchestration, not direct agent collaboration. The Model Context Protocol (MCP) and Agent Hub are not defined protocols in SAP's framework for this purpose. A2A's design supports scalable, autonomous AI operations, enhancing enterprise agility and interoperability.

NEW QUESTION # 37

(When customers build a custom AI solution on a hyperscaler, what are some of the complexities they would have to deal with?
Note: There are 3 correct answers to this question.)

- A. Integration of identity management
- B. Data replication
- C. Implementation of security measures
- D. Management of GPU clusters
- E. Choice of the wrong LLM

Answer: A,C,D

Explanation:
Comprehensive and Detailed Explanation From Exact Extract: Building custom AI solutions directly on hyperscalers introduces complexities such as implementing security measures to ensure compliance and data protection, integrating identity management for secure access control, and managing GPU clusters for scalable AI training and inference. These challenges arise from the need to handle infrastructure, integration, and operations manually, which SAP BTP mitigates by providing a standardized, hyperscaler-agnostic platform.
Exact extracts supporting this:
"Transitioning to a hyperscaler can help, but may still require dealing with integration and security complexities."learning.sap.com SAP AI Core is "designed to manage the execution and operations of AI assets in a standardized, scalable, and hyperscaler-agnostic manner," implying complexities like GPU management on hyperscalers.help.sap.com community.sap.com Integration challenges include "typical integration challenges and the integration journey in a multi-cloud environment," encompassing identity management.community.sap.com Other options are incorrect because:
Option C: While selecting an appropriate LLM is important, the complexity is not specifically "choice of the wrong LLM" but rather model management; SAP emphasizes broader operational issues.
Option E: Data replication is a data management task but not highlighted as a primary complexity in hyperscaler AI builds; focus is on security, integration, and infrastructure.
