In order to pass the exam and fight for a brighter future, these people who want to change themselves need to put their ingenuity and can do spirit to work. More importantly, it is necessary for these people to choose the convenient and helpful DAA-C01 study materials as their study tool in the next time. Because their time is not enough to prepare for the exam, and a lot of people have difficulty in preparing for the exam, so many people who want to pass the DAA-C01 Exam and get the related certification in a short time have to pay more attention to the study materials.

With our DAA-C01 pdf torrent, you will minimize your cost on the exam preparation and be ready to pass your DAA-C01 actual test on your first try. TopExamCollection will provide you the easiest and quickest way to get the DAA-C01 certification without headache. We will offer the update service for one year. In addition, you will instantly download the DAA-C01 PDF VCE after you complete the payment. With the help of DAA-C01 study dumps, you can just spend 20-30 hours for the preparation. Then you will be confident in the actual test.

## 100% Pass Quiz Snowflake DAA-C01 Latest Top Questions

Now in such society with a galaxy of talents, stabilizing your job position is the best survival method. But stabilizing job position is not so easy. When others are fighting to improve their vocational ability, if you still making no progress and take things as they are, then you will be eliminated. In order to stabilize your job position, you need to constantly improve your DAA-C01 professional ability and keep up with the pace of others to let you not fall far behind others.

## Snowflake SnowPro Advanced: Data Analyst Certification Exam Sample Questions (Q11-Q16):

### NEW QUESTION # 11

When summarizing large data sets using Snowsight dashboards, how do they facilitate exploratory analysis?

- A. Snowsight dashboards provide visual representations aiding in quick comprehension.
- B. Snowsight dashboards limit data representation options for large data sets.
- C. They offer detailed textual summaries instead of visual representations.
- D. They can't efficiently handle large data sets for summarization.

**Answer: A**

Explanation:

Snowsight dashboards provide visual representations aiding in quick comprehension of large data sets.

### NEW QUESTION # 12

You are tasked with building a near real-time data pipeline that ingests streaming data from Kafka into Snowflake. The data is semi-structured JSON. The goal is to transform and load only records with a 'status' field equal to 'active' into a table named 'ACTIVE RECORDS'. Which approach provides the most efficient and scalable solution, minimizing latency and Snowflake resource consumption?

- A. Use a third-party ETL tool to consume the Kafka stream, filter for 'status' = 'active', and then load the data directly into 'ACTIVE RECORDS' using the Snowflake JDBC driver.
- B. Create an external table pointing to the Kafka topic. Use a Snowflake stream on the external table to track changes, and a task to transform and load 'active' records into 'ACTIVE RECORDS'
- C. Use Snowflake's Kafka connector to load all data into a staging table, then create a scheduled task that runs every minute to transform and load the 'active' records into 'ACTIVE RECORDS'
- D. Ingest all data into a raw table using Snowpipe. Create a materialized view on top of the raw table, filtering for 'status' = 'active', and store the results in 'ACTIVE RECORDS'.
- E. Implement a Snowpipe with a continuous ingest endpoint. Use a transformation defined within the COPY INTO statement to filter for 'status' = 'active' during the load process.

**Answer: E**

Explanation:

Snowpipe with a transformation in the COPY INTO statement offers the most efficient and scalable near real-time data ingestion solution. This approach allows filtering during the load process, avoiding the need to load all data and then filter later. Option A involves a scheduled task, which introduces latency. Option C's external table + stream approach is generally slower for continuous ingest. Option D adds the overhead and cost of a 3rd party ETL tool, while Option E's materialized view would work, it isn't the most efficient approach for the initial data filtering.

### NEW QUESTION # 13

You have a large dataset in Snowflake containing customer order information stored in a table named 'ORDERS' with columns 'ORDER\_ID' (INT), 'CUSTOMER\_ID' (INT), 'ORDER\_DATE' (DATE), 'TOTAL\_AMOUNT' (FLOAT), and 'DISCOUNT\_APPLIED' (BOOLEAN). You need to use Snowsight dashboards to analyze customer spending behavior and identify potential outliers. Which of the following visualizations, combined with appropriate SQL queries, would be MOST effective in identifying customers with unusually high or low order values? (Select TWO)

- A. Option C
- B. Option B
- C. Option E
- D. Option D
- E. Option A

**Answer: A,E**

Explanation:

Options A and C are the most effective. A Box Plot (A) is ideal for identifying outliers in a distribution. By visualizing the distribution of total order amounts per customer, you can easily spot customers with unusually high or low spending. A Scatter Plot (C) directly shows the relationship between customer ID and total spending, making it easy to visually identify outliers based on their position relative to other data points. Option B is more suitable for trend analysis over time, and options D and E are useful but don't directly highlight individual customer outliers in terms of order value.

### NEW QUESTION # 14

You're building a dashboard to monitor the performance of various marketing campaigns. The data resides in Snowflake, and you're using a BI tool that supports direct query. The table has columns: 'CAMPAIGN ID', 'DATE', 'IMPRESSIONS', 'CLICKS', 'SPEND', and 'CONVERSIONS'. You need to create a calculated field in the BI tool representing the Cost Per Conversion (CPC), but you want to optimize query performance and avoid division by zero errors. Assume 'SPEND' and 'CONVERSIONS' are both numeric columns. Which SQL expression, suitable for use in a direct query BI tool, is the MOST performant and robust way to calculate CPC, avoiding zero conversion issues?

- A.
- B.
- C.
- D.
- E.

**Answer: A**

Explanation:

The 'DIV0' function is specifically designed by Snowflake to handle division by zero gracefully, returning NULL. It's the most concise and performant way to achieve the desired result. 'NULLIF(CONVERSIONS, 0)' is also a correct way, but DIV0 is more accurate for the Snowflake environment. 'CASE WHEN' and 'IFF' are functionally equivalent in this scenario, but are shorter to write. 'ZEROIFNULL' will return 0 when input is null, which won't solve the zero conversion issues. Furthermore, 'ZEROIFNULL' is not a valid Snowflake function.

### NEW QUESTION # 15

When designing a data collection system, what factors should be considered when assessing how often data needs to be collected? (Select all that apply)

- A. Data source availability
- B. Data collection tool limitations
- C. Volume of data
- D. Business requirements

**Answer: C,D**

Explanation:

Assessing data collection frequency involves considering business requirements and the volume of data necessary for analysis.

### NEW QUESTION # 16

.....

Snowflake is obliged to give you 12 months of free update checks to ensure the validity and accuracy of the Snowflake DAA-C01 exam dumps. We also offer you a 100% money-back guarantee, in the very rare case of failure or unsatisfactory results. This puts your mind at ease when you are Snowflake DAA-C01 Exam preparing with us.
