**Reliable Integration-Architect Test Price, Integration-Architect Valid Exam Labs**

We are aimed to improve customer satisfaction and always put customers first. Our experts check daily whether there is an update to the Salesforce Certified Integration Architect torrent prep, and if there is an update system, we will automatically send it to you. So it can guarantee latest knowledge and keep up with the pace of change. Many people are worried that online shopping electronics have viruses. But you don't have to worry about our products. Our Integration-Architect Exam Questions are absolutely safe and virus-free. If you have any questions during the installation process, we will arrange professional staff on guidance of your installation and use. We always put your needs first.

## Salesforce Certified Integration Architect Sample Questions (Q65-Q70):

### NEW QUESTION # 65

Northern Trail Outfitters has a registration system that is used for workshops offered at its conferences.

Attendees use a Salesforce community to register for workshops, but the scheduling system manages workshop availability based on room capacity. It is expected that there will be a big surge of requests for workshop reservations when the conference schedule goes live.

Which integration pattern should be used to manage the influx in registrations?

- A. Remote Process Invocation-Fire and Forget
- B. RemoteCall-In
- C. Batch Data Synchronization
- D. Remote Process Invocation-Request and Reply

**Answer: C**

Explanation:

The Batch Data Synchronization pattern is suitable for this business use case because it allows transferring large volumes of data between Salesforce and the scheduling system in batches. This can handle the surge of requests for workshop registrations without overloading the systems or affecting the performance. The batch process can run at regular intervals or on demand to synchronize the data between the systems

1: Batch Data Synchronization Pattern

### NEW QUESTION # 66

An Integration Architect has built a Salesforce application that integrates multiple systems and keeps them synchronized via Platform Events.

What is taking place if events are only being published?

- A. The platform events are published after the Apex transaction completes.
- B. The platform events are published immediately before the Apex transaction completes.
- C. The platform events has a trigger in Apex.
- D. The platform events are being published from Apex.

**Answer: A**

Explanation:

[https://developer.salesforce.com/docs/atlas.en-us.platform\\_events.meta/platform\\_events/platform\\_events\\_define\\_ui.htm](https://developer.salesforce.com/docs/atlas.en-us.platform_events.meta/platform_events/platform_events_define_ui.htm)

### NEW QUESTION # 67

A large enterprise customer has decided to implement Salesforce as their CRM. The current system landscape includes the following:

1. An Enterprise Resource Planning (ERP) solution that is responsible for Customer Invoicing and Order fulfillment.
2. A Marketing solution they use for email campaigns.

The enterprise customer needs their sales and service associates to use Salesforce to view and log their interactions with customers and prospects in Salesforce.

Which system should be the System of record for their customers and prospects?

- A. ERP with all prospect data from Marketing and Salesforce.
- B. Salesforce with relevant Marketing and ERP information.
- C. Marketing with all customer data from Salesforce and ERP.
- D. New Custom Database for Customers and Prospects.

**Answer: B**

Explanation:

Option C is correct because Salesforce should be the system of record for their customers and prospects, as it is the CRM solution that the sales and service associates use to view and log their interactions with them. Salesforce can also integrate with the Marketing and ERP solutions to display relevant information from those systems, such as campaign history, invoices, and orders<sup>1</sup> Option A is incorrect because ERP is not a suitable system of record for customers and prospects, as it is mainly focused on invoicing and order fulfillment. ERP may not have all the data that the sales and service associates need to interact with them, such as contact details, preferences, activities, and opportunities. ERP may also have different data models and definitions than Salesforce and Marketing, which can cause data quality and consistency issues<sup>3</sup> Option B is incorrect because Marketing is not a suitable system of record for customers and prospects, as it is mainly focused on email campaigns. Marketing may not have all the data that the sales and service associates need to interact with them, such as account information, service cases, contracts, and quotes. Marketing may also have different data models and definitions than Salesforce and ERP, which can cause data quality and consistency issues.

Option D is incorrect because creating a new custom database for customers and prospects is not a feasible or efficient solution, as it would require additional development, maintenance, and integration costs. It would also create another layer of complexity and potential data duplication in the system landscape. Salesforce already provides a robust and flexible platform for managing customer and prospect data, which can be easily customized and integrated with other systems.

#### NEW QUESTION # 68

Which WSDL should an architect consider when creating an integration that might be used for more than one Salesforce organization and different metadata?

- A. SOAP API WSDL
- B. Enterprise WSDL
- C. Corporate WSDL
- **D. Partner WSDL**

**Answer: D**

Explanation:

Explanation

The Partner WSDL is the best option for creating an integration that might be used for more than one Salesforce organization and different metadata. The Partner WSDL is loosely typed and can reflect against any configuration of Salesforce. It is static and does not change if modifications are made to an organization's Salesforce configuration. Therefore, it is more flexible and adaptable than the Enterprise WSDL, which is strongly typed and bound to a specific configuration of Salesforce<sup>1</sup> References: Differences between Salesforce provided WSDL files

#### NEW QUESTION # 69

Northern Trail Outfitters has recently experienced intermittent network outages in its call center. When network service resumes, Sales representatives have inadvertently created duplicate orders in the manufacturing system because the order was placed but the return acknowledgement was lost during the outage.

Which solution should an architect recommend to avoid duplicate order booking?

- A. Use scheduled apex to query manufacturing system for potential duplicate or missing orders.
- B. Use Outbound Messaging to ensure manufacturing acknowledges receipt of order.
- C. Have scheduled Apex resubmit orders that do not have a successful response.
- **D. Implement idempotent design and have Sales Representatives retry order(s) in question.**

**Answer: D**

Explanation:

Idempotent design means that the same request can be repeated multiple times without changing the outcome. This is useful for avoiding duplicate orders in case of network failures or timeouts. By implementing idempotent design, the sales representatives can retry the order(s) in question without creating duplicates in the manufacturing system. Outbound messaging is not a reliable solution because it does not guarantee delivery or acknowledgement of messages. Scheduled apex is not a real-time solution and may not

catch all the duplicate or missing orders

## NEW QUESTION # 70

.....

For the complete Salesforce Certified Integration Architect exam preparation and success, the Pass4guide Integration-Architect exam practice test questions are the best choice. With the Salesforce Integration-Architect Exam Questions, you will get everything that you need to learn, prepare and succeed in the Salesforce Certified Integration Architect certification exam.
