100% Pass 2026 300-710: Newest PDF Securing Networks with Cisco Firepower VCE

Our 300-710 training prep was produced by many experts, and the content was very rich. At the same time, the experts constantly updated the contents of the study materials according to the changes in the society. The content of our 300-710 study guide is definitely the most abundant. Before you go to the exam, our 300-710 Exam Questions can provide you with the simulating exam environment. This not only includes the examination process, but more importantly, the specific content of the exam. In previous years' examinations, the hit rate of 300-710 learning quiz was far ahead in the industry.

Cisco Securing Networks with Cisco Firepower Sample Questions (Q126-Q131):

NEW QUESTION # 126

On the advanced tab under inline set properties, which allows interfaces to emulate a passive interface?

- A. propagate link state
- B. strict TCP enforcement
- **C. TAP mode**
- D. transparent inline mode

Answer: C

Explanation:

Link state propagation automatically brings down the second interface in the inline interface pair when one of the interfaces in an inline set goes down.

https://www.cisco.com/c/en/us/td/docs/security/firepower/640/configuration/guide/fpmc-config-guide-v64/inline_sets_and_passive_interfaces_for_firepower_threat_defense.html With tap mode, the FTD is deployed inline, but the network traffic flow is undisturbed.

https://www.cisco.com/c/en/us/td/docs/security/firepower/650/configuration/guide/fpmc-config-guide-v65/interface_overview_for_firepower_threat_defense.html#concept_DB45E8BBB07946728427F_F98DB2DC56D

NEW QUESTION # 127

An engineer is configuring URL filtering for a Cisco FTD device in Cisco FMC. Users must receive a warning when they access <http://www.Badadults.com> with the option of continuing to the website if they choose to.

No other websites should be blocked. Which two actions must the engineer take to meet these requirements?

(Choose two.)

- **A. Configure an access control rule that matches an URL object for <http://www.badadults.com>; and set the action to interactive Block.**
- B. Configure the default action for the access control policy to Interactive Block.
- C. On the HTTP Responses tab of the access control policy editor, set the Block Response Page to Custom.
- **D. On the HTTP Responses tab of the access control policy editor, set the Interactive Block Response Page to system-provided.**
- E. Configure an access control rule that matches the Adult URL category and set the action to interactive Block.

Answer: A,D

Explanation:

Explanation

To configure URL filtering for a Cisco FTD device in Cisco FMC, and to meet the requirements of the question, the engineer must do the following:

On the HTTP Responses tab of the access control policy editor, set the Interactive Block Response Page to system-provided. This will enable the system to display a warning page to the users when they try to access a blocked URL, and give them the option to continue or cancel. The system-provided page is a default page that contains a generic message and a logo.

Configure

an access control rule that matches an URL object for <http://www.badadults.com>; and set the action to Interactive Block. This will apply the interactive block action to the specific URL that is defined in the URL object.

The interactive block action will trigger the interactive block response page that was configured in the previous step.

The other options are incorrect because:

On the HTTP Responses tab of the access control policy editor, setting the Block Response Page to Custom will not affect the interactive block action. The block response page is used when the action is set to Block, not Interactive Block.

Configuring the default action for the access control policy to Interactive Block will apply the interactive block action to all URLs that are not matched by any access control rule. This will not meet the requirement of blocking no other websites.

Configuring an access control rule that matches the Adult URL category and sets the action to Interactive Block will apply the interactive block action to all URLs that belong to the Adult category.

This

will not meet the requirement of blocking only <http://www.badadults.com>

NEW QUESTION # 128

Which command-line mode is supported from the Cisco Firepower Management Center CLI?

- A. admin
- **B. configuration**

- C. user
- D. privileged

Answer: B

Explanation:

Section: Management and Troubleshooting

Explanation

Explanation/Reference: https://www.cisco.com/c/en/us/td/docs/security/firepower/660/configuration/guide/fpmc-config_guide-v66/command_line_reference.pdf

NEW QUESTION # 129

An engineer must export a packet capture from Cisco Secure Firewall Management Center to assist in troubleshooting an issue on a Secure Firewall Threat Defense device. When the engineer navigates to URL for Secure Firewall Management Center at:

..<<FMC IP>/capture/CAP/pcap/sample.pcap

An engineer receives a 403: Forbidden error instead of being provided with the PCAP file. Which action resolves the issue?

- A. Disable the HTTPS server and use HTTP.
- **B. Enable HTTPS in the device platform policy.**
- C. Enable the proxy setting in the device platform policy.
- D. Disable the proxy setting on the client browser.

Answer: B

Explanation:

If an engineer receives a 403: Forbidden error when attempting to download a packet capture file from Cisco Secure Firewall Management Center (FMC), the issue is likely due to HTTPS not being enabled in the device platform policy. To resolve this issue, the engineer must enable HTTPS in the platform policy.

Steps:

- * In FMC, navigate to Policies > Device Management > Platform Settings.
- * Edit the relevant platform policy.
- * Enable HTTPS for the device.
- * Deploy the changes to the FTD device.

This ensures that the FMC and FTD device can securely transfer the packet capture file over HTTPS, resolving the 403 error.

References: Cisco Secure Firewall Management Center Administrator Guide, Chapter on Platform Settings and HTTPS Configuration.

NEW QUESTION # 130

A security engineer found a suspicious file from an employee email address and is trying to upload it for analysis, however the upload is failing. The last registration status is still active. What is the cause for this issue?

- A. There is a host limit set.
- **B. Cisco AMP for Networks is unable to contact Cisco Threat Grid on premise.**
- C. Cisco AMP for Networks is unable to contact Cisco Threat Grid Cloud.
- D. The user agent status is set to monitor.

Answer: B

NEW QUESTION # 131
