Professional-Cloud-Database-Engineer Valuable Feedback - Reliable Professional-Cloud-Database-Engineer Test Labs

It is very necessary for a lot of people to attach high importance to the Professional-Cloud-Database-Engineer exam. It is also known to us that passing the exam is not an easy thing for many people, so a good study method is very important for a lot of people, in addition, a suitable study tool is equally important, because the good and suitable Professional-Cloud-Database-Engineer Study Materials can help people pass the exam in a relaxed state.

The Google Professional-Cloud-Database-Engineer Exam consists of multiple-choice and multiple-select questions, and candidates are given two hours to complete it. Professional-Cloud-Database-Engineer exam covers a wide range of topics, including database design, data modeling, data migration, data security, and performance optimization. Candidates who successfully pass the exam earn the Google Cloud Certified - Professional Cloud Database Engineer certification, which is globally recognized as a validation of their expertise in cloud database management.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q60-Q65):

NEW QUESTION # 60

You are migrating a telehealth care company's on-premises data center to Google Cloud. The migration plan specifies: PostgreSQL databases must be migrated to a multi-region backup configuration with cross-region replicas to allow restore and failover in multiple scenarios.

MySQL databases handle personally identifiable information (PII) and require data residency compliance at the regional level. You want to set up the environment with minimal administrative effort. What should you do?

- A. Set up different projects for PostgreSQL and MySQL databases, and apply organizational policy constraints at a project level.
- **B. Set up different organizations for each database type, and apply policy constraints at the organization level.**
- C. Set up Cloud Logging and Cloud Monitoring with Cloud Functions to send an alert every time a new database instance is created, and manually validate the region.
- D. Set up Pub/Sub to ingest data from Cloud Logging, send an alert every time a new database instance is created, and manually validate the region.

Answer: B

NEW QUESTION # 61

You are designing a database strategy for a new web application. You plan to start with a small pilot in one country and eventually expand to millions of users in a global audience. You need to ensure that the application can run 24/7 with minimal downtime for maintenance. What should you do?

- A. Use highly available Cloud SQL with multiple zones.
- B. Use Cloud SQL with cross-region replicas.
- C. Use Cloud Spanner in a multi-region configuration.
- **D. Use Cloud Spanner in a regional configuration.**

Answer: D

NEW QUESTION # 62

You are writing an application that will run on Cloud Run and require a database running in the Cloud SQL managed service. You want to secure this instance so that it only receives connections from applications running in your VPC environment in Google Cloud. What should you do?

- A. 1. Create your instance with a specified external (public) IP address.
2. Choose the VPC and create firewall rules to allow only connections from Cloud Run into your instance.
3. Connect to the instance using a connection pool to best manage connections to the instance.
- **B. 1. Create your instance with a specified internal (private) IP address.
2. Choose the VPC with private service connection configured.
3. Configure the Serverless VPC Access connector in the same VPC network as your Cloud SQL instance.**

- 4. Connect to the instance using a connection pool to best manage connections to the instance.
- C. 1. Create your instance with a specified internal (private) IP address.
2. Choose the VPC with private service connection configured.
3. Configure the Serverless VPC Access connector in the same VPC network as your Cloud SQL instance.
4. Use Cloud SQL Auth proxy to connect to the instance.
- D. 1. Create your instance with a specified external (public) IP address.
2. Choose the VPC and create firewall rules to allow only connections from Cloud Run into your instance.
3. Use Cloud SQL Auth proxy to connect to the instance.

Answer: B

Explanation:

NEW QUESTION # 63

Your company uses Bigtable for a user-facing application that displays a low-latency real-time dashboard. You need to recommend the optimal storage type for this read-intensive database. What should you do?

- A. Recommend solid-state drives (SSD).
- B. Recommend hard disk drives (HDD).
- C. Recommend splitting the Bigtable instance into two instances in order to load balance the concurrent reads.
- D. Recommend mixed storage types.

Answer: C

NEW QUESTION # 64

You are responsible for designing a new database for an airline ticketing application in Google Cloud. This application must be able to:

Work with transactions and offer strong consistency.

Work with structured and semi-structured (JSON) data.

Scale transparently to multiple regions globally as the operation grows.

You need a Google Cloud database that meets all the requirements of the application. What should you do?

- A. Use a Bigtable instance with clusters in multiple regions.
- B. Use Firestore in Datastore mode.
- C. Use Cloud SQL for PostgreSQL with both cross-region read replicas.
- D. Use Cloud Spanner in a multi-region configuration.

Answer: C
