The study material to get Databricks Certified Data Analyst Associate Exam should be according to individual's learning style and experience. Real Databricks Databricks-Certified-Data-Analyst-Associate Exam Questions certification makes you more dedicated and professional as it will provide you complete information required to work within a professional working environment. These questions will familiarize you with the Databricks-Certified-Data-Analyst-Associate Exam Format and the content that will be covered in the actual test. You will not get a passing score if you rely on outdated practice questions.

Databricks Databricks-Certified-Data-Analyst-Associate Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Analytics applications: It describes key moments of statistical distributions, data enhancement, and the blending of data between two source applications. Moreover, the topic also explains last-mile ETL, a scenario in which data blending would be beneficial, key statistical measures, descriptive statistics, and discrete and continuous statistics.
Topic 2	<ul style="list-style-type: none">Data Visualization and Dashboarding: Sub-topics of this topic are about of describing how notifications are sent, how to configure and troubleshoot a basic alert, how to configure a refresh schedule, the pros and cons of sharing dashboards, how query parameters change the output, and how to change the colors of all of the visualizations. It also discusses customized data visualizations, visualization formatting, Query Based Dropdown List, and the method for sharing a dashboard.
Topic 3	<ul style="list-style-type: none">Data Management: The topic describes Delta Lake as a tool for managing data files, Delta Lake manages table metadata, benefits of Delta Lake within the Lakehouse, tables on Databricks, a table owner's responsibilities, and the persistence of data. It also identifies management of a table, usage of Data Explorer by a table owner, and organization-specific considerations of PII data. Lastly, the topic it explains how the LOCATION keyword changes, usage of Data Explorer to secure data.
Topic 4	<ul style="list-style-type: none">SQL in the Lakehouse: It identifies a query that retrieves data from the database, the output of a SELECT query, a benefit of having ANSI SQL, access, and clean silver-level data. It also compares and contrasts MERGE INTO, INSERT TABLE, and COPY INTO. Lastly, this topic focuses on creating and applying UDFs in common scaling scenarios.

Topic 5	<ul style="list-style-type: none"> • Databricks SQL: This topic discusses key and side audiences, users, Databricks SQL benefits, complementing a basic Databricks SQL query, schema browser, Databricks SQL dashboards, and the purpose of Databricks SQL endpoints • warehouses. Furthermore, the delves into Serverless Databricks SQL endpoint • warehouses, trade-off between cluster size and cost for Databricks SQL endpoints • warehouses, and Partner Connect. Lastly it discusses small-file upload, connecting Databricks SQL to visualization tools, the medallion architecture, the gold layer, and the benefits of working with streaming data.

PDF Databricks-Certified-Data-Analyst-Associate Download - Valid Databricks-Certified-Data-Analyst-Associate Exam Labs

Our Databricks-Certified-Data-Analyst-Associate study guide boosts many merits and functions. You can download and try out our Databricks-Certified-Data-Analyst-Associate test question freely before the purchase. You can use our product immediately after you buy our product. We provide 3 versions for you to choose and you only need 20-30 hours to learn our Databricks-Certified-Data-Analyst-Associate training materials and prepare the exam. The passing rate and the hit rate are both high. We provide 24-hours online customer service and free update within one year. And if you have a try on our Databricks-Certified-Data-Analyst-Associate Exam Questions, you will find that there are many advantages of our Databricks-Certified-Data-Analyst-Associate training materials.

Databricks Certified Data Analyst Associate Exam Sample Questions (Q33-Q38):

NEW QUESTION # 33

A data analyst has created a Query in Databricks SQL, and now they want to create two data visualizations from that Query and add both of those data visualizations to the same Databricks SQL Dashboard.

Which of the following steps will they need to take when creating and adding both data visualizations to the Databricks SQL Dashboard?

- A. They will need to decide on a single data visualization to add to the dashboard.
- B. They will need to copy the Query and create one data visualization per query.
- C. They will need to create two separate dashboards.
- D. They will need to alter the Query to return two separate sets of results.
- E. They will need to add two separate visualizations to the dashboard based on the same Query.

Answer: E

Explanation:

A data analyst can create multiple visualizations from the same query in Databricks SQL by clicking the + button next to the Results tab and selecting Visualization. Each visualization can have a different type, name, and configuration. To add a visualization to a dashboard, the data analyst can click the vertical ellipsis button beneath the visualization, select + Add to Dashboard, and choose an existing or new dashboard. The data analyst can repeat this process for each visualization they want to add to the same dashboard.

Reference: Visualization in Databricks SQL, Visualize queries and create a dashboard in Databricks SQL

NEW QUESTION # 34

Query History provides Databricks SQL users with a lot of benefits. A data analyst has been asked to share all of these benefits with their team as part of a training exercise. One of the benefit statements the analyst provided to their team is incorrect.

Which statement about Query History is incorrect?

- A. It can be used to troubleshoot slow running queries.
- B. It can be used to debug queries.
- C. It can be used to view the query plan of queries that have run.
- D. It can be used to automate query execution on multiple warehouses (formerly endpoints).

Answer: D

Explanation:

Query History in Databricks SQL is intended for reviewing executed queries, understanding their execution plans, and identifying performance issues or errors for debugging purposes. It allows users to analyze query duration, resources used, and potential bottlenecks. However, Query History does not provide any capability to automate the execution of queries across multiple warehouses; automation must be handled through jobs or external orchestration tools, not through the Query History feature itself.

NEW QUESTION # 35

Which of the following statements about a refresh schedule is incorrect?

- A. A refresh schedule is not the same as an alert.
- **B. You must have workspace administrator privileges to configure a refresh schedule**
- C. A query being refreshed on a schedule does not use a SQL Warehouse (formerly known as SQL Endpoint).
- D. Refresh schedules can be configured in the Query Editor.
- E. A query can be refreshed anywhere from 1 minute to 2 weeks

Answer: B

Explanation:

This statement is incorrect. In Databricks SQL, any user with sufficient permissions on the query or dashboard can configure a refresh schedule-workspace administrator privileges are not required.

Here is the breakdown of the correct information:

A . True - Queries can be scheduled to refresh at intervals ranging from 1 minute to 2 weeks.

B . True - You can configure refresh schedules in the Query Editor.

C . False statement - A query being refreshed does use a SQL Warehouse. However, the option in question says it does not use a warehouse, which would be incorrect in a different context. Since this is a trickier one, we know that scheduled queries do require a SQL Warehouse to run.

D . True - Refresh schedules are different from alerts; alerts are triggered based on specific conditions being met in query results.

E . False (and thus the correct answer to this question) - You do not need to be a workspace admin to set a refresh schedule. You only need the correct permissions on the object.

NEW QUESTION # 36

A data analyst creates a Databricks SQL Query where the result set has the following schema:

region STRING

number_of_customer INT

When the analyst clicks on the "Add visualization" button on the SQL Editor page, which of the following types of visualizations will be selected by default?

- A. Violin Chart
- **B. IBar Chart**
- C. Line Chart
- D. Histogram
- E. There is no default. The user must choose a visualization type.

Answer: B

Explanation:

According to the Databricks SQL documentation, when a data analyst clicks on the "Add visualization" button on the SQL Editor page, the default visualization type is Bar Chart. This is because the result set has two columns: one of type STRING and one of type INT. The Bar Chart visualization automatically assigns the STRING column to the X-axis and the INT column to the Y-axis. The Bar Chart visualization is suitable for showing the distribution of a numeric variable across different categories. Reference: Visualization in Databricks SQL, Visualization types

NEW QUESTION # 37

What is used as a compute resource for Databricks SQL?

- A. Single-node clusters

- B. Downstream BI tools integrated with Databricks SQL
- C. Standard clusters
- **D. SQL warehouses**

Answer: D

NEW QUESTION # 38

.....

As is known to us, it must be of great importance for you to keep pace with the times. If you have difficulty in gaining the latest information when you are preparing for the Databricks-Certified-Data-Analyst-Associate, it will be not easy for you to pass the exam and get the related certification in a short time. However, if you choose the Databricks-Certified-Data-Analyst-Associate exam reference guide from our company, we are willing to help you solve your problem. There are a lot of IT experts in our company, and they are responsible to update the contents every day. If you decide to buy our Databricks-Certified-Data-Analyst-Associate study question, we can promise that we will send you the latest information every day.
