

In-Depth of Questions B2C-Commerce-Architect valuable resource

What's more, part of that Prep4SureReview B2C-Commerce-Architect dumps now are free: https://drive.google.com/open?id=1-TyFyetpicPx8w8cDb_UdPPGEeFuJC00

If you have any question about our B2C-Commerce-Architect test torrent, do not hesitate and remember to contact us. we are glad to help you solve your problem. If you buy our Salesforce Certified B2C Commerce Architect guide torrent and take it seriously consideration, you will find you can take your exam after twenty to thirty hours' practice. So come to buy our B2C-Commerce-Architect Test Torrent, it will help you pass your exam and get the certification in a short time that you long to own.

Salesforce B2C-Commerce-Architect Exam Syllabus Topics:

Section	Weight	Objectives
Monitoring and Troubleshooting	16%	- System monitoring, logging, and alerting - Diagnose and resolve complex issues - Performance tuning and optimization - Disaster recovery and high availability design
Integrations and Customization	23%	- Headless commerce and PWA architecture - Data exchange and transformation strategies - Legacy system integration and extension - Design and implement integrations (OCAPI, SCAPI, third-party)
Build	23%	- Implement security, caching, and performance patterns - Apply Storefront Reference Architecture (SFRA) best practices - Design and implement scalable architecture - Customize and extend platform capabilities
Launch	10%	- Post-launch validation and governance - Data migration and replication - Site launch planning and rollout strategies - SEO, domain, and locale configuration
Design and Discovery	28%	- Assess scalability, performance, and data volume requirements - Create technical artifacts and architecture diagrams - Evaluate solutions, APIs, and integration points - Translate business requirements into technical specifications

100% Pass Quiz The Best B2C-Commerce-Architect - Useful Salesforce Certified B2C Commerce Architect Dumps

Simple and easy-to-understand words are used in the content of our Salesforce Certified B2C Commerce Architect B2C-Commerce-Architect exam questions. It is one of the unique benefits of Salesforce Certified B2C Commerce Architect B2C-

Commerce-Architect exam material that is not common in other Salesforce Certified B2C Commerce Architect B2C-Commerce-Architect. Prep4SureReview designed this Salesforce Certified B2C Commerce Architect B2C-Commerce-Architect exam material to work in different systems.

Salesforce Certified B2C Commerce Architect Sample Questions (Q36-Q41):

NEW QUESTION # 36

During a load test the storefront shows steady but slow performance on all the pages being tested. The Architect opens Pipeline Profiler and sorts the data by "total time" column. The following come as the top five items:

Controller Name	Function Name	Hits	Total Time	Average Time	Minimum Time	Maximum Time
Product	Detail	38,880	23,606,840	607	39	2,311
Search	Show	32,400	16,530,360	464	107	1,143
Home	IncludeHeaderMenu	5,184	10,776,564	2,079	2,056	2,200
Product	HitTile	7,944	7,944,480	33	10	245
Product	ShowInCategory	69	2,663,280	69	33	100

Which controller should the Architect focus on to further investigate the performance issue?

- A. Product-HitTile as it has the highest hits during the load test.
- B. Search Show as this is one of the key controllers that the customer uses
- **C. Product-Detail as it has the highest total time and highest maximum time.**
- D. Home-IncludeHeaderMenu as it has highest average time.

Answer: C

Explanation:

Focusing on the 'Product-Detail' controller is prudent given that it has the highest total time and the highest maximum time (Answer C), suggesting that it significantly contributes to the overall load and potential slowdowns on the site. By analyzing and optimizing this controller, the architect can potentially achieve the most substantial improvement in performance. Efforts might include optimizing database queries, caching frequently requested data, or simplifying complex logic in the Product-Detail page's processing.

NEW QUESTION # 37

The Client wants to have a flash sale on a few products every day. These products are sold through B2C Commerce as well as an in-store Point of Sale system that is tied to the same inventory.

An Architect analyzes the following proposed solution:

Inventory feed will continue to run daily but add a web-service call to compare and update B2C Commerce inventory in real time during checkout after a flash product's inventory reaches a threshold.

Which two risks should the Architect communicate to the Client about this solution?

Choose 2 answers

- A. If the product inventory threshold that triggers the web service calls is reached too often. It will have a negative impact on site performance.
- **B. The default rate limiter configuration for the web-service could cause the web-service to return an exception during high traffic.**
- **C. If the external hosted web-service is unreliable. It could be a point of failure in the site's order placement flow.**
- D. Because the job would still be configured to run daily there will be a degrade in performance during non-flash sales periods

Answer: B,C

Explanation:

The risks associated with the proposed real-time inventory update solution during flash sales are:

Option A (The default rate limiter configuration for the web-service could cause the web-service to return an exception during high traffic): This is a critical risk because high traffic during flash sales could exceed the rate limits set for the web-service, leading to exceptions and potentially failing to update inventory in real-time.

Option B (If the external hosted web-service is unreliable, it could be a point of failure in the site's order placement flow): Reliance on an external web-service for crucial operations like inventory updates introduces a risk of downtime or performance issues if the service is unreliable, directly impacting the ability to complete orders during peak sales periods.

Both risks could severely disrupt operations during critical sales events, suggesting a need for robust contingency plans and potentially reevaluating the solution architecture to ensure reliability.

NEW QUESTION # 38

An Architect is configuring a data replication schedule.
Which task(s) can be removed In order to reduce replication times?

- A. Search Indexes
- B. Campaign
- C. Static content
- D. Storefront URLs

Answer: C

Explanation:

Reducing the replication times in data synchronization can be effectively achieved by removing or reducing frequency of tasks that are less critical or that do not change frequently. Static content, such as images and static texts that do not change often, can be safely removed from frequent replication schedules (Answer B).

This adjustment will reduce the data load and frequency of updates, thereby speeding up the overall replication process. Unlike dynamic content like campaigns, search indexes, or URLs that might change frequently and impact user experience or site functionality if not updated, static content does not typically necessitate immediate replication, making it a suitable candidate for removal to enhance replication efficiency.

NEW QUESTION # 39

A new project for a Client will involve a few different Integrations to their middleware system resulting in four different web services. All will use the same credentials to the middleware. Each will have the same timeout, but will require a separate log file prefix. How should the Architect set this up with the Service framework using a minimal set of configuration?

- A. Four Service Configurations, Four Service Profiles, Four Service Credentials
- B. One Service Configuration, Four Service Profiles, One Service Credential.
- C. Four Service Configurations, One Service Profile, One Service Credential.
- D. Four Service Configurations, Four Service Profiles, One Service Credential

Answer: C

Explanation:

For setting up multiple integrations that require the same credentials and timeout settings but need separate log file prefixes:

Four Service Configurations are needed to specify the unique endpoint and other specifics for each of the four web services.

One Service Profile can be used for all these configurations because they share the same timeout and other settings, optimizing the configuration process.

One Service Credential is sufficient since all services authenticate with the same credentials, simplifying credential management and security handling.

This setup reduces redundancy and complexity in the service framework, ensuring a streamlined and efficient integration process while meeting all specified requirements.

NEW QUESTION # 40

The Home-Show route uses this middleware chain:

```
server.get('Show', consentTracking.consent, cache.applyDefaultCache, function (req, res, next) {  
  // base code here  
});
```

The developer added Home.s in another cartridge, which is before the original cartridge in the cartridge path, to extend that route but it does not have the middleware chain:

```
server.append('Show', function (req, res, next) {  
  // custom code here  
});
```

Assuming the code is correct on both functions, what is the expected result?

- A. A RunTime error is thrown, "Error: Params do not match route".
- B. The base code executes, but the custom code is ignored because the signature lines do not match.
- C. The base code executes and then the custom code executes.
- D. The custom code executes and then the base code executes.

Answer: A

NEW QUESTION # 41

.....

Prep4SureReview also offers a demo of the Salesforce B2C-Commerce-Architect exam product which is absolutely free. Up to 1 year of free Salesforce Certified B2C Commerce Architect (B2C-Commerce-Architect) questions updates are also available if in any case the sections of the Salesforce B2C-Commerce-Architect actual test changes after your purchase. Lastly, we also offer a full refund guarantee according to terms and conditions if you do not get success in the Salesforce Salesforce Certified B2C Commerce Architect Certification Exam after using our B2C-Commerce-Architect product. These offers by Prep4SureReview save your time and money. Buy Salesforce Certified B2C Commerce Architect (B2C-Commerce-Architect) practice material today.
