Nowadays, seldom do the exam banks have such an integrated system to provide you a simulation test. You will gradually be aware of the great importance of stimulating the actual JN0-351 exam after learning about our JN0-351 study tool. Because of this function, you can easily grasp how the practice system operates and be able to get hold of the core knowledge about the JN0-351 Exam. In addition, when you are in the real exam environment, you can learn to control your speed and quality in answering questions and form a good habit of doing exercise, so that you're going to be fine in the JN0-351 exam.

Juniper JN0-351 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Layer 2 Security: This topic introduces Layer 2 protection mechanisms and firewall filters to fortify network security. Practical skills in configuring, monitoring, and troubleshooting these features prepare candidates to address exam objectives and real-world challenges effectively.
Topic 2	<ul style="list-style-type: none">Protocol Independent Routing: An essential domain for understanding routing components outside protocol dependencies, this topic enhances expertise in configuring, monitoring, and troubleshooting critical elements.

Topic 3	<ul style="list-style-type: none"> • Tunnels: The fundamentals of IP tunneling are emphasized, highlighting their requirements and functionalities. Mastery in configuring, monitoring, and troubleshooting tunnels equips professionals to meet the demands of the JN0-351 exam.
Topic 4	<ul style="list-style-type: none"> • High Availability: This topic covers the importance and application of high availability within Junos OS environments. Knowledge in configuring and managing these components is critical for ensuring robust and uninterrupted network operations, aligning with exam expectations.
Topic 5	<ul style="list-style-type: none"> • Layer 2 Switching or VLANs: This topic deepens the understanding of Layer 2 switching operations within the Junos OS, including VLAN concepts and benefits. Experienced networking professionals gain insights into configuration, monitoring, and troubleshooting techniques essential for network segmentation and efficiency.
Topic 6	<ul style="list-style-type: none"> • BGP: This topic focuses on the operational and conceptual elements of BGP, a cornerstone in enterprise networks.
Topic 7	<ul style="list-style-type: none"> • Spanning Tree: Networking professionals explore the principles and advantages of the Spanning Tree Protocol (STP) to ensure loop-free topologies in Layer 2 networks.

JN0-351 Reliable Dumps - JN0-351 Pdf Free

If you want to pass your exam and get your certification, we can make sure that our JN0-351 guide questions will be your ideal choice. Our company will provide you with professional team, high quality service and reasonable price. In order to help customers solve problems, our company always insist on putting them first and providing valued service. We are living in the highly competitive world now. We have no choice but improve our soft power, such as get JN0-351 Certification. It is of great significance to have JN0-351 guide torrents to pass exams as well as highlight your resume, thus helping you achieve success in your workplace.

Juniper Enterprise Routing and Switching, Specialist (JNCIS-ENT) Sample Questions (Q108-Q113):

NEW QUESTION # 108

You are a network operator troubleshooting BGP connectivity.

Which two statements are correct about the output shown in the exhibit? (Choose two.)

□

- A. The BGP session is not established.
- B. The routers are exchanging IPv4 routes.
- C. Peer 10.32.1.2 is configured for AS 63645.
- D. The R1 is configured for AS 65400.

Answer: B,D

Explanation:

The local AS is 65400, as indicated by "Local AS: 65400".

The output shows "NLRI for this session: inet-unicast", which indicates that the routers are exchanging IPv4 unicast routes.

NEW QUESTION # 109

Which statement is correct about controlling the routes installed by a RIB group?

- A. An export policy is applied to the RIB group.
- B. Only routes in the last table are installed.
- C. A firewall filter must be configured to install routes in the RIB groups.
- D. An import policy is applied to the RIB group.

Answer: D

Explanation:

When routes are placed into a RIB group, an import policy can be applied to determine which routes are accepted into that group. This policy helps in controlling which routes get installed or filtered into the RIB group from various sources like other routing protocols or static routes.

NEW QUESTION # 110

What is a purpose of using a spanning tree protocol?

- A. to eliminate broadcast storms
- B. to tunnel Ethernet frames
- C. to look up MAC addresses
- D. to route IP packets

Answer: A

Explanation:

A broadcast storm is a network condition where a large number of broadcast packets are sent and received by multiple devices, causing congestion and performance degradation. A broadcast storm can occur when there are loops in the network topology, meaning that there are multiple paths between two devices.

A spanning tree protocol is a network protocol that prevents loops from being formed when switches or bridges are interconnected via multiple paths. It does this by creating a logical tree structure that spans all the devices in the network, and disabling or blocking the links that are not part of the tree, leaving a single active path between any two devices.

By eliminating loops, a spanning tree protocol also eliminates broadcast storms, as broadcast packets will not be forwarded endlessly along the looped paths. Instead, broadcast packets will be sent only along the tree structure, reaching each device once and avoiding congestion.

NEW QUESTION # 111

When trying to commit the configuration shown in the exhibit, you receive an error.

What is the problem?

□

- A. You have omitted the interface-mode trunk command.
- B. You have omitted the interface-mode access command.
- C. You have not set the interface family correctly.
- D. You have not configured an IP address to the interface.

Answer: A

NEW QUESTION # 112

Which two statements correctly describe RSTP port roles? (Choose two.)

- A. The designated port forwards data to the downstream network segment or device.
- B. The alternate port is a standby port for an edge port.
- C. The backup port is used as a backup for the root port.
- D. The root port is responsible for forwarding data to the root bridge.

Answer: A,D

Explanation:

Explanation

In Rapid Spanning Tree Protocol (RSTP), there are several port roles that determine the behavior of the port in the spanning tree. Option A suggests that the designated port forwards data to the downstream network segment or device. This is correct because the designated port is the port on a network segment that has the best path to the root bridge. It's responsible for forwarding frames towards the root bridge and sending configuration messages into its segment.

Option D suggests that the root port is responsible for forwarding data to the root bridge. This is also correct because the root port is always the link directly connected to the root bridge, or the shortest path to the root bridge. It's used to forward traffic towards the root bridge.
